

Information regarding the location of the disposal area of dredged material from dredging works within the project of Rehabilitation and modernization of port infrastructure in Bechet Port

The location of the disposal area of dredged material from dredging works for the proposed project is between km 676+300 - km 677+300, at a distance of 400m from the left bank.

Permission is granted for a discharge of dredged material up to a maximum limit of 134000 cubic meters, until 31 December 2025, subject to the following conditions:

- Dredged material will be discharged in successive passes from upstream to downstream;
- The area shall be permanently checked by control soundings to avoid grounding or breaking of hopper barges;
- The areas will be marked out in advance and the competent water authority will be notified 10 days in advance;
- It is necessary to request another authorization for the discharge area in case it is found that the amount of authorized quantity is exceeded;
