

Neptun Deep Project

Presentation Memorandum on Neptun Deep Project for issuance of Environmental Agreement

ROND-HJ-RGEIS-00-0001 | C

December, 2021

Beneficiaries: ExxonMobil Exploration and Production Romania Limited and OMV Petrom

Prepared for the Constanta Environmental Protection Agency

Neptun Deep Project

Document Title: Presentation Memorandum on Neptun Deep Project for issuance of Environmental Agreement

Document No: ROND-HJ-RGEIS-00-0001

Revision: C

Date: December, 2021

Client Name: ExxonMobil Exploration and Production Romania Limited

Contractor: Halcrow Romania SRL

Subcontractors: The National Institute for Marine Research and Development "Grigore Antipa" (NIMRD)
The National Research and Development Institute for Marine Geology and Geo-Ecology – GeoEcoMar
EPC Consultanță de mediu
PFA Zaharia Constantin

Halcrow Romania SRL is a Jacobs Engineering Group Inc. Company
85 Carol Davila Street
Room A, 2nd floor, 050453
Sector 5, Bucharest, Romania
T +40 3 1106 5376
F +40 311 034 189

Contents

1.	Project name.....	1
2.	Project holder.....	1
3.	Description of the physical characteristics of the project	1
3.1	Project summary	1
3.2	Justification of project necessity	5
3.3	The value of the investment.....	6
3.4	Proposed implementation period.....	6
3.5	Site layout plans.....	7
3.6	Physical characteristic features of the project.....	7
3.6.1	Profile and production capacities.....	7
3.6.2	Description of the installation and process flows existing on site	8
3.6.2.1	Onshore Natural Gas Metering Station and Central Control Room	9
3.6.2.1.1	Natural Gas Metering Station.....	9
3.6.2.1.2	Central Control Room	13
3.6.2.1.3	Other permanent facilities/areas included at the NGMS and CCR.....	15
3.6.2.2	Gas Production Pipeline and Fiber Optic Cable	17
3.6.2.2.1	Gas Production Pipeline	17
3.6.2.2.2	Fiber Optic Cable.....	21
3.6.2.2.3	Shore Crossing	23
3.6.2.2.4	Local Roads and Railway Onshore Crossing.....	25
3.6.2.3	Domino and Pelican South Fields Offshore Infrastructure	26
3.6.2.3.1	Gas Production Wells.....	26
3.6.2.3.2	Drilling Centers.....	27
3.6.2.3.3	Domino and Pelican South Production Flowlines.....	28
3.6.2.3.4	Domino and Pelican South Umbilicals	30
3.6.2.3.5	Manifolds, suction piles and mudmats.....	32
3.6.2.3.6	Other subsea equipment.....	32
3.6.2.4	Shallow Water Platform.....	33
3.6.2.4.1	SWP Overview	33
3.6.2.4.2	SWP Infrastructure.....	35
3.6.3	Description of the production processes of the project	40
3.6.3.1	Offshore production processes	40
3.6.3.2	Onshore production processes.....	45
3.6.4	Raw materials, energy and used fuels, and their supply	46
3.6.5	Connection to utility networks in the area	47
3.6.5.1	Onshore Utilities.....	47
3.6.5.1.1	Water Supply.....	47
3.6.5.1.2	Wastewater Management.....	48

3.6.5.1.3	Power Supply	49
3.6.5.1.4	Gas Supply	49
3.6.5.1.5	Heating, Ventilation, and Air Conditioning	49
3.6.5.1.6	Telecommunication and Security.....	50
3.6.5.2	Offshore Utilities.....	50
3.6.5.2.1	Water Supply.....	50
3.6.5.2.2	Wastewater Management.....	51
3.6.5.2.3	Power Supply	51
3.6.5.2.4	Gas Supply	53
3.6.5.2.5	Heating, Ventilation, and Air Conditioning	54
3.6.5.2.6	Telecommunication and Security.....	54
3.6.6	Description of the site restoration works in the areas impacted by the project execution	55
3.6.7	New access ways or changes to existing ones.....	56
3.6.8	Natural resources used during construction and operation	57
3.6.9	Methods used in construction/demolition.....	58
3.6.9.1	Construction and Installation	58
3.6.9.1.1	Onshore NGMS and CCR.....	58
3.6.9.1.2	Gas Production Pipeline and Fiber Optic Cable	59
3.6.9.1.3	Shallow Water Platform	65
3.6.9.1.4	Subsea systems.....	67
3.6.9.2	Wells Drilling.....	68
3.6.9.3	Precommissioning/Commissioning.....	77
3.6.9.4	Decommissioning/Demolition	79
3.6.10	Execution plan	79
3.6.11	Relation with other existing or planned projects.....	82
3.6.12	Details on the alternatives that have been considered	87
3.6.12.1	Alternative "Zero"	87
3.6.12.2	Engineering/technological alternatives.....	87
3.6.13	Other activities that may occur as a result of the project	89
3.6.14	Other permits required for the project.....	90
4.	Description of required demolition works.....	91
5.	Description of the project location.....	92
5.1	Project Site Location.....	92
5.1.1	Onshore Site Location.....	92
5.1.2	Shore Crossing Site Location	92
5.1.3	Offshore Site Location	93
5.2	Distance to borders.....	93
5.3	Location of the site in relation with the cultural patrimony.....	93
5.3.1	Onshore.....	93

5.3.2 Offshore	96
5.4 Current and planned land uses of the site and adjacent areas.....	97
5.5 Zoning and land use policies.....	100
5.6 Location of the project towards sensitive areas.....	102
5.6.1 Localization of the project towards the protected natural areas of national interest	102
5.6.2 Location of the project towards wetlands - Ramsar sites.....	102
5.7 Geographic coordinates of the project site	103
5.8 Details of any considered alternative for site location.....	106
6. Description of the significant possible effects of the project on the environment.....	110
6.1 Sources of pollutants and installations for the retainment, evacuation, and dispersion of pollutants in the environment.....	110
6.1.1 Water quality protection	110
6.1.1.1 Existing situation.....	110
6.1.1.2 Sources of pollutants for water, discharge point or emissary	113
6.1.1.2.1 Onshore Wastewater Streams.....	114
6.1.1.2.2 Offshore Wastewater Streams	114
6.1.1.3 Wastewater treatment plants or pre-treatment plants.....	117
6.1.1.3.1 Onshore Facilities.....	117
6.1.1.3.2 Offshore Facilities	119
6.1.2 Air protection.....	121
6.1.2.1 Existing situation.....	121
6.1.2.2 Sources of pollutants for air, pollutants, including odor sources.....	125
6.1.2.3 Installations for the retainment and dispersion of pollutants in the atmosphere	127
6.1.3 Protection against noise and vibration.....	128
6.1.3.1 Existing situation.....	128
6.1.3.1.1 Onshore.....	128
6.1.3.1.2 Offshore.....	130
6.1.3.2 Noise and vibration sources.....	130
6.1.3.2.1 Onshore.....	130
6.1.3.2.2 Offshore.....	131
6.1.3.3 Arrangements and equipment for the protection against noise and vibration.....	132
6.1.3.3.1 Onshore and shore crossing	132
6.1.3.3.2 Offshore.....	132
6.1.4 Protection against radiation	133
6.1.4.1 Radiation sources.....	133
6.1.4.2 Devices and equipment for radiation protection.....	134
6.1.5 Soil and subsoil protection	135
6.1.5.1 Existing situation.....	135
6.1.5.1.1 Onshore.....	135
6.1.5.1.2 Offshore.....	136

6.1.5.2	Sources of pollutants for soil and subsoil	138
6.1.5.3	Works and equipment for soil and subsoil protection	140
6.1.6	Protection of terrestrial and aquatic ecosystems.....	141
6.1.6.1	Existing situation.....	141
6.1.6.1.1	Onshore.....	141
6.1.6.1.2	Offshore.....	163
6.1.6.2	Identification of sensitive areas that may be affected by the project	172
6.1.6.2.1	Onshore.....	172
6.1.6.2.2	Offshore.....	173
6.1.6.3	Works, equipment, and measures for the protection of biodiversity, nature monuments and protected areas.....	176
6.1.6.3.1	Onshore.....	176
6.1.6.3.2	Offshore.....	177
6.1.7	Protection of human settlements and other public interest objectives.....	178
6.1.7.1	Identification of public interest objectives.....	178
6.1.7.2	Works, equipment, and measures for the protection of human settlements and protected and / or publicly protected objects	179
6.1.8	Waste prevention and reduction program of generated waste on site during project construction and operation, including disposal.....	180
6.1.8.1	List and quantities of the generated waste.....	180
6.1.8.2	Waste Management Plan	183
6.1.8.3	Program for prevention and reduction of the quantities of waste generated	185
6.1.9	Management of hazardous chemicals and substances	186
6.1.9.1	Hazardous substances and chemicals used and / or produced	186
6.1.9.2	Management of hazardous substances and chemicals and protection measures of the environmental factors and human health	187
6.1.9.2.1	Construction.....	187
6.1.9.2.2	Operation	187
6.2	Use of natural resources, especially soil, land, water, and biodiversity.....	190
7.	Description of the environmental aspects likely to be significantly affected by the project ...	191
7.1	Nature of impact on environmental components	191
7.1.1	Impact on water.....	191
7.1.2	Impact on air quality.....	192
7.1.3	Noise and vibration	193
7.1.4	Impact on soil and subsoil.....	194
7.1.5	Impact on biodiversity	195
7.1.6	Impact on population and human health	197
7.1.7	Impact on historical and cultural heritage.....	198
7.1.8	Impact on landscape and visual environment	199
7.1.9	Impact of the project on climate change	199
7.1.10	Impact of climate change on the project	200

7.2	Impact extent	202
7.3	Impact magnitude and complexity	202
7.4	Impact probability	202
7.5	Impact duration, frequency, and reversibility	202
7.6	Measures to avoid, reduce or mitigate the significant impact on the environment	202
7.7	Transboundary impact	203
8.	Provisions for environmental monitoring	204
9.	Link to other normative acts and / or plans / programs / strategies / planning documents ..	205
9.1	Justification of the project classification according to the provisions of other national normative acts transposing the Community legislation	205
9.2	Indication on any plan/scheme/strategy/planning document from which the project is part, including the approving regulatory document	209
10.	Works for organization of construction site	209
10.1	Description of the works required for the organization of the construction site	209
10.1.1	Temporary Road Railway Crossing	209
10.1.2	NGMS and CCR Construction Works Site	210
10.1.3	Microtunnelling Construction Site	211
10.2	Location of the construction site organization	213
10.3	Describe the environmental impact of the construction site organization works	217
10.4	Sources of pollutants and installations for retaining, discharging, and dispersing pollutants in the environment during site construction organization	219
10.5	Facilities and measures to control emissions of pollutants into the environment	221
11.	Site restoration works	222
11.1	Proposed works for site rehabilitation upon completion of the investment, in case of accidents and / or cessation of activity	222
11.2	Prevention and response in case of accidental pollution	224
11.3	Restoration of the initial conditions / rehabilitation for future land use	227
12.	Information on natural protected areas of community interest	227
12.1	Location of the project towards natural protected areas of community interest. Name and code of protected areas of community interest	227
12.1.1	Onshore site	227
12.1.2	Coastal and Offshore site	228
12.2	Justification of the direct link of the project and its need for the conservation management of the protected natural areas of community interest	230
12.3	Presence and number / areas covered by species and habitats of community interest in the project area	230
12.3.1	General Elements	230
12.3.1.1	ROSCI0273 Zona marina de la Capul Tuzla	230
12.3.1.2	ROSPA0076 Marea Neagră	231
12.3.2	Habitats and species of community interest in Natura 2000 sites in the project area	232
12.4	Assessment of the potential impact of the project on the species and habitats in the natural protected areas of community interest	243

12.4.1 Identification of potential impacts and forms of impact	243
12.4.2 Impact prediction.....	244
12.4.3 Cumulative impact	313
13. Aspects regarding the impact of the project on water bodies.....	318
13.1 Water Framework Directive.....	318
13.2 Project location.....	318
13.2.1 Onshore	318
13.2.2 Coastal and Offshore.....	324
13.3 Ecological status/ecological potential and chemical status of the surface water body.....	327
13.3.1 Onshore Water Bodies	327
13.3.2 Coastal Water Bodies.....	327
13.3.2.1 The state of the water body according to Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters.....	327
13.3.2.2 The state of the water body according to other documents.....	329
13.4 Quantitative and chemical status of the groundwater body	331
13.5 Environmental objectives of the identified water bodies.....	331
13.5.1 Onshore Water Bodies	331
13.5.2 Coastal and Offshore Water Bodies.....	334

List of Appendices

Appendix A. Regulatory documents issued by authorities

Appendix B. General Site Location Plans

Appendix C. Onshore and Offshore Site Layout Plans

Appendix D. Process flow diagrams

Appendix E. Process equipment layout plans

Appendix F. Details for other onshore facilities

Appendix G. Lists and quantities of estimated waste

Appendix H. Lists of estimated chemicals

Appendix I. Chemicals safety data sheets

VSAT	Very Small Aperture Terminal
WAN	Wide Area Network
WBDF	Water-based drilling fluid
WD	Water Depth
WFD	Water Framework Directive
WGS	World Geodetic System
°C	Celsius Degree

Glossary of Terms

Term	Definition
Active Fire Protection	A group of systems that require some amount of action or motion in order to work efficiently in the event of a fire. The actions may be manually operated (e.g., fire extinguisher) or automatic (e.g., sprinkler)
Advanced Alarm Management System	A combination of applications that help to make effective alarm systems in conformance to the industry recommendations and standards.
Barrel	US (United States) unit measure of volume defined as 42 US gallons, respectively 159 liters or 35 UK (United Kingdom) gallons
BAT - Best Available Techniques	The most efficient and advanced stage of development registered in the development of an activity and of the exploitation modes, which demonstrates the practical possibility of the specific techniques to constitute the reference for establishing the emission limit values and other authorization conditions, in order to prevent pollution, and, if not possible, to reduce, as a whole, emissions and the impact on the environment as a whole.
Bend Restrictors	Term used in the oil and gas industry as part of offshore deep-sea drilling operations. It is designed to prevent damage to an umbilical cable from overbending. It offsets the action of applied loads which could kink or buckle the internal conduits of an umbilical, cable, flexible pipe.
Cathodic Protection	A technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell. A simple method of protection connects the metal to be protected to a more easily corroded "sacrificial metal" to act as the anode. The sacrificial metal then corrodes instead of the protected metal. For structures such as long pipelines, where passive galvanic cathodic protection is not adequate, an external direct current electrical power source is used to provide sufficient current.
Central Control Room	Standalone building from which an unmanned platform / automatic installation is remotely monitored and controlled. The CCR computers communicate with the control computers and instrumentation in the monitored installation via a fiber optic cable or a satellite connection.
Chemical Injection Metering Valves	Valves that ensure flow control, metering, and highly accurate dosing of chemicals in subsea systems.
Closed-Circuit Television	TV system in which signals are not publicly distributed but are monitored primarily for surveillance and security.
cMIST Dehydration Unit	A patented compact absorption and separation technology developed by ExxonMobil specifically for gas dehydration and acid gas removal applications.
Current Transfer Zone	During operation, power is fed to the far end of the flowline via a piggyback cable (see DEH below) and returns through the steel flowline and seawater. At each end of the flow- line, where the current enters and leaves the pipe, additional anodes are mounted to form a well-defined, low impedance path for the current to the sea, known as the current transfer zone.
Deck Integrated Firefighting System	A system consisting of deck integrated pop-up nozzles, foam skid and activation panels. When the system is released the nozzles will be lifted up by the water pressure and make an effective spray distribution of water/foam mixture to the entire landing area.
Direct Electric Heating	The working principle of this system is that the heated flowline is part of an electrical circuit. The DEH system includes a direct electric heating cable piggybacked to the flowline all the way along the heated section. At the far end, the piggyback cable is connected (grounded) to the pipe steel. Analogous, a return cable is connected to the steel pipe in the near end. Thus, the return

Term	Definition
	current is divided between the steel pipe and seawater. The heat development is caused by power losses in the steel pipe and piggyback cable, including the electromagnetic coupling between the cable and the steel pipe.
Drill Center	The drill center of subsea production system refers to the subsea wellhead and the surrounding access facilities including manifold.
Dynamic Positioning	A computer-controlled system to automatically maintain a vessel's position and heading by using its own propellers and thrusters.
Electrical Flying Lead	Leads used to link connections between subsea structures such as manifolds, trees, umbilical termination units and subsea distribution units. Flight leads are provided in lengths between a few meters and a few hundred meters and pre-assembled with connecting plugs.
Electrically Heated	The heating of a pipe or valve by means of an electrical resistor wrapped around the heated object.
Emergency Shutdown	A critical condition for which immediate shutdown of the installation is required and delayed shutdown options are not acceptable because of the danger posed to the platform, human life or physical damage to the equipment.
Exclusive Economic Zone	The exclusive economic zone is established in the marine space of the shore, located beyond the territorial sea and adjacent to them, in which a state exercises sovereign rights and jurisdiction over the natural resources of the seabed, its subsoil and the water column above, and with regard to the various activities related to the exploration, exploitation, protection, conservation of the environment and their management. The exclusive economic zone extends up to a maximum of 200 nautical miles offshore, the distance being calculated from the territorial water line.
Fast Supply Vessel	A vessel specialized in the transport of offshore support personnel, deck cargo, and below-deck cargo such as fuel and potable water to and from offshore installations such as oil platforms, drilling rigs, drill and dive ships or wind farms.
Fiber Optic Cable	A fiber optic cable is a cable that contains one or more optical fibers that serve to guide light. Optical cables are widely used, especially in telecommunications. The optical fibers are generally individually covered with plastic layers and contained in a protective tube suitable for the environment in which the cable will be mounted.
Fire and Gas System	Systems for safeguarding process plants and production facilities that handle flammable and toxic materials. The system contains detection equipment and firefighting and control equipment.
Flare Stack	A gas combustion device used in industrial plants and at oil or gas extraction sites and offshore oil and gas rigs. Flare stacks are primarily used for burning off flammable gas released by safety valves during unplanned over-pressuring of equipment, during startups and shutdowns, they are also often used for the planned combustion of gases over relatively short periods.
Flexible Flowline	Flowlines that transport gas from the drilling center to the production platform.
Flow Assurance	A process that ensures successful and economical flow of hydrocarbons stream from reservoir to the point of sale.
Flow Control Valve	A valve that regulates the flow or pressure of a fluid.
Flowline End Termination	A skid representing the end or termination of a flowline. The skid typically contains a male hub that serves as an attachment point for a jumper. There may also be other components on the skid such as remote operated vehicles interface panels, ball valves and associated mud mats.

Term	Definition
Full Well Stream	Well stream gas that has not had separable liquids removed, such as water, oil, or condensate.
Gas Production Pipeline	The pipeline that connects the production platform to the natural gas metering station and transports the gas treated in accordance with the requirements of the Romanian National Transport System.
Gas turbine generator	The power generator for the production platform driven by a gas turbine powered by gases produced at the production platform.
Heater Skid	Skid type system for raising the temperature of the circulating gas to the level necessary for the operation and inhibition of hydrate formation.
Hook-Up and Commissioning	Overall preparatory activities for the start-up of an asset for oil and gas production.
Human-Machine Interface	A feature or component of a certain device or software application that enables operators to manage industrial and process control machinery via a computer-based graphical user interface
Hydraulic Power Unit	A self-contained system that generally includes a motor, a fluid reservoir, and a pump. It works to apply the hydraulic pressure needed to drive motors, cylinders, and other complementary parts of a given hydraulic system.
Inch	Unit of measure (US and UK standards) of length equivalent to 2.54 cm
Inlet Separator	A separator located at the entrance of the gas processing system, which ensures the primary separation of gas from liquid and solid fractions.
In-Line Inspection	A preventative maintenance examination of pipelines to identify corrosion, cracks and other defects that may result in catastrophic failure of the structure. It is a form of nondestructive examination.
In-Line Tee Assembly	An integrated equipment package that creates a branched line tie-in point along a pipeline. By creating a tee along the pipeline, the operator can plan for tie-in points to fit future expansion plans.
Instrumentation and Control	The system of equipment for monitoring and controlling the processes within an installation. Instruments include valves, transmitters, and analyzers. Control instrumentation includes devices such as solenoids, valves, circuit breakers, and relays.
Integrated Control and Safety System	A technological platform that combines elements of process control and functional safety into a single architecture.
Intelligent Well Completions	Intelligent completions incorporate permanent downhole sensors and surface-controlled downhole flow control valves, enabling the system to monitor, evaluate, and actively manage production (or injection) in real time without any well interventions.
Jumper	A short pipe connector that is used to transport production fluid between two subsea components, for example, a tree and a manifold, a manifold and another manifold etc.
Laydown Area	A temporary storage area for materials unloaded by the crane from supply or support vessels.
Local Area Network	A computer network that interconnects computers within a limited area (e.g., office building).
Local Equipment Room	A room or space within a building or installation for the storage or installation of mechanical or electrical/electronic devices.
Manifold	A manifold is an arrangement of piping and/or valves designed to combine, distributed, control, and often monitor fluid flow.

Term	Definition
Maximum Allowable Operating Pressure	The maximum pressure at which the weakest point of the equipment, system or a vessel can handle at a specific temperature and which the walls may safely hold in normal operation.
Metering Equipment	An equipment for measuring the flow of gases transmitted through a pipeline / installation.
Mobile Offshore Drilling Unit	A floating offshore drilling rig with support legs or dynamic positioning.
Multi-Purpose Service Vessel	Vessels capable of performing a range of activities including supply duties, lifting operations, ROV and survey activities, platform maintenance, diving, light well intervention and accommodation support.
National Transmission System	The natural gas transmission and distribution system on the Romanian territory, part of the public property of the state and operated by TRANSGAZ SA
Natural Gas Metering Station	A dedicated site designed for the continuous and simultaneous analysis of the quantity and quality of the natural gas being transported in the pipeline.
Non-Aqueous Fluid	A non-aqueous drilling fluid or well circulating fluid. Common non-aqueous fluid systems are diesel, mineral oil, or synthetic fluid-based invert emulsions, or other non-water-based fluids
Operations and Maintenance	The functions, duties and labor associated with the daily operations and normal repairs, replacement of parts and structural components, and other activities needed to preserve an asset so that it continues to provide acceptable services and achieves its expected life.
Passive Fire Protection	An integral component of the components of structural fire protection and fire safety in a building. Passive fire protection attempts to contain fires or slow the spread, such as by fire-resistant walls, floors, and doors.
Pipe Spool	Prefabricated off-site pipes in various shapes for connecting pipes and equipment on the platform.
Pipeline End Termination	The end or termination of a pipeline. The skid typically contains a male hub that serves as an attachment point for a jumper. There may also be other components on the skid such as ROV interface panels, ball valves and associated mud mats.
Pipeline Pig	A pig launcher is a device which uses a pressurized container to shoot a cleaning device ("pig") through the pipeline to perform a variety of functions including cleaning, monitoring, and maintaining of the pipe.
Platform Jacket	Jacket refers in the oil and gas exploration and production to the steel frame supporting the deck and the topsides in a fixed offshore platform
Platform Support Vessel	A ship specially designed to supply offshore oil and gas platforms. These ships accomplish a variety of tasks. The primary function for most of these vessels is logistic support and transportation of goods, tools, equipment, and personnel to and from offshore oil platforms and other offshore structures.
Process Control System	Pieces of equipment along the production line during manufacturing that test the process in a variety of ways and return data for monitoring and troubleshooting.
Produced Water	Water that comes out of the well with the gas during production. Produced water contains suspended solids, dissolved solids, and various chemicals used in the production process.
Project Site	The location on where the project installations and associated facilities will be located.
Remote Operated Vehicle	An underwater vehicle which is usually tethered to a ship from where the control is ensured. The vehicle is similar to a robot, which is fitted out with sensors and tools to perform various tasks.

Term	Definition
Riser	A pipe carrying up the subsea gas from the flowline on the seabed to the topside unit on the platform.
Safety Instrumented System	An engineering set of hardware and software controls which are especially used on critical process systems.
Shallow Water Platform	Offshore platform that processes the natural gases extracted from the Neptun Deep block and sends them to shore through a natural gas production pipeline.
Shutdown Valves	An actuated valve designed to stop the flow of a hazardous fluid upon the detection of a dangerous event. This provides protection against possible harm to people, equipment, or the environment.
Shut-in Tubing Pressure	The surface pressure exerted at the top of a wellbore when it is closed either at the Christmas tree or the blowout preventer.
Subsea Distribution Unit	The distribution unit is located subsea and provides the hydraulic, chemical, fiber optic and electrical distribution between the Umbilical Termination Assembly and the rest of the subsea system.
Suction Pile	Suction piles (also called suction caissons or suction anchors) are a long steel cylinder topped with a pile top or cap. The cap comprises valves to assist with embedment as well as connections that differ depending on the use of the pile.
Trawling Protection	Trawling protection structures for protection against fishing activities are structures that do not allow trawl nets to attach equipment and underwater pipes.
Tunnel Boring Machine	A boring equipment used to excavate tunnels with a circular cross section through a variety of soil and rock strata. They may also be used for microtunneling. They can be designed to bore through anything from hard rock to sand.
Ultra-High Frequency	The designation for radio frequencies in the range between 300 megahertz (MHz) and 3 gigahertz (GHz), also known as the decimeter band as the wavelengths range from one meter to one tenth of a meter (one decimeter).
Umbilical	Umbilical System: Assembly of electrical conductors, fiber optics, hydraulic pipes, chemical injection pipes, etc. in a joint metal coating.
Umbilical Termination Assembly	Umbilical termination assemblies terminate umbilical lines and provide one or more connections for hydraulic, chemical, electrical and fiber optic services between umbilical and submarine equipment.
Uninterruptible Power Supply	An electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries
Vent Stack	A vent stack disposal system is a vertical pipe used to collect and discharge gas into the atmosphere in a way that is safe and efficient.
Very Small Aperture Terminal	A two-way satellite ground station with a dish antenna that is smaller than 3.8 m. The majority of VSAT antennas range from 75 cm to 1.2 m. Data rates, in most cases, range from 4 Kbit/s up to 16 Mbit/s.
Windsock	A windsock is a conical textile tube that is used to tell wind speed and direction. Windsocks typically are used at airports to indicate the direction and strength of the wind to pilots and at chemical plants where there is risk of gaseous leakage.

1. Project name

Neptun Deep Project, including:

- **Onshore facilities:** Pipeline and Communication Cable Installation; Undercrossing of Beach, Seafront, Roads and Railway; Temporary Road Railway Crossing; Construction of the Natural Gas Metering Station - NGMS, Control Center - CCR, Fencing, Lighting, Parking, Green Space, Platforms, and Internal Roads; Site Works Organization and Utilities Connections.
- **Offshore facilities:** Domino and Pelican South Infrastructure (Drill Centers, Wells, Manifolds, Umbilicals, Risers, Flowlines, Ancillary Equipment); Shallow Water Platform; Gas Pipeline; Fiber Optic Cable; Landfall Crossing; Utilities.

2. Project holder

Beneficiary Name: ExxonMobil Exploration and Production Romania Limited and OMV Petrom SA (the "Beneficiaries").

**Contact details
(address, phone,
fax, e-mail address,
website):**

The contact details of the Beneficiaries are summarized below:

- **ExxonMobil Exploration and Production Romania Limited (EMEPRL)**, a company existing under the laws of the Bahamas acting through its Romanian branch office, ExxonMobil Exploration and Production Romania Limited Nassau (Bahamas) Sucursala Bucuresti, registered at the Trade Register Office under no. J40/17387/2008, unique registration code RO24593762, headquarter in Bucharest, 169A Calea Floreasca, Building B, 8th floor, Sector 1, phone/fax: +4031 860 7200 / +4031 860 7280, legal representative Alin Stirbu, email: alin.stirbu@exxonmobil.com;
- **OMV Petrom S.A.**, Romanian legal entity with headquarter in Bucharest, 22 Coralilor Street, Sector 1 ("Petrom City"), postal code 013329, registered at the Trade Register Office under no. J40/8302/1997, unique registration code RO1590082.

Name of the contact persons: Alin Stirbu - Deputy Branch Manager, alin.stirbu@exxonmobil.com

Daniel Dinu - Environmental and Regulatory Advisor, daniel.dinu@exxonmobil.com

3. Description of the physical characteristics of the project

3.1 Project summary

Neptun Deep is a proposed offshore natural gas development in the Neptun Deep block, located in the Romanian portion of the Black Sea. ExxonMobil, as the operator, and OMV Petrom, as a 50% partner are the participants in the Neptun Deep project.

The proposed objective of the Neptun Deep project is to develop the natural gas reserves from the Pelican South and Domino fields. Pelican South is located on the continental shelf in approximately 130 m water depth. Domino is located in approximately 1,000 m water depth, off of the continental shelf.

The Domino field is proposed to be developed with two subsea drill centers - Domino Drill Center 1 (DODC1) and Domino Drill Center 2 (DODC2), while the Pelican South field is proposed to be developed with a single drill center - Pelican South Drill Center 1 (PSDC1). Each drill center will contain wells placed in a cluster arrangement around a production manifold. The subsea system will be monitored and controlled using an electro-hydraulic control system connected to a shallow water platform (SWP) by two control umbilicals. The umbilicals will also supply chemicals to the subsea facilities.

The current concept for subsea development contemplates the following: eight subsea production wells, with the possibility of potentially completing up to twelve subsea production wells. Production from the Domino wells will be comingled at the DODC1 and DODC2 manifolds and connected to a single rigid, insulated flowline with direct electric heating (DEH) that will be tied back to the SWP. Pelican South production will be comingled at the PSDC1 manifold and tied back to the SWP by a single heated, flexible flowline.

Both Pelican South and Domino fields will be tied back to the normally unstaffed SWP located near the Pelican South Field in approximately 130 m water depth. The SWP will comprise of a steel jacket structure with topside facilities. The topside facilities will receive the full well stream fluids and produce sales quality gas. The SWP will host facilities for treatment consisting of the separation of well stream fluids and dehydration prior to transportation to shore.

A two-phase inlet separator enables the separation of gas, liquids, and fines. The natural gas will then be further dehydrated/dried utilizing TEG - tri-ethylene glycol to meet the dew-point specification of the Romanian National Transmission System (NTS). The separated produced water stream will meet regulatory requirements and it will be discharged as approved by the competent authorities.

The offshore facilities will be powered by three gas-fired turbine generators located on the topside of the platform. A back-up essential services generator will also be located on the topside. The offshore facilities will be controlled by a distributed control system located on the SWP and at the onshore CCR. Operations and maintenance personnel will be transported to and from the SWP via work boat for maintenance and intervention activities. The topside will have a helideck for emergency evacuation, in the event that rapid evacuation is required.

The offshore facilities will be connected to a metering station on land by a 30-inch (762 mm) gas production pipeline (GPP) and a Fiber Optic Cable (FOC) for control and communication. Communication by FOC is backed up by a very small aperture terminal (VSAT) for control.

From the SWP, dehydrated natural gas will be transported approximately 160 km through the 30-inch (762 mm) diameter GPP for delivery into the Romanian NTS. The GPP will under cross the southern Romanian coastline using a microtunneling method in order to keep the ROSCI 0273 Cape Tuzla marine protected area, the beach and the cliff undisturbed. A NGMS near the shore crossing will serve as the custody-transfer location between the Project and Transgaz, the operator of the Romanian NTS.

The NGMS facility's primary function is to serve as the metering and custody-transfer point for the natural gas from the upstream production facilities operated by ExxonMobil and the downstream NTS operated by Transgaz. The CCR will be located within the area of the NGMS, and its purpose is to house the facilities for monitoring and remotely operating the offshore platform and wells.

Downstream of the custody transfer point, Transgaz will construct a connection to the Romanian NTS. ***Transgaz facilities are not part of the Neptun Deep project scope.***

Figure 1 presents the overall scheme of the Neptun Deep Project. Figure 2 shows the general development concept of Neptun Deep project.

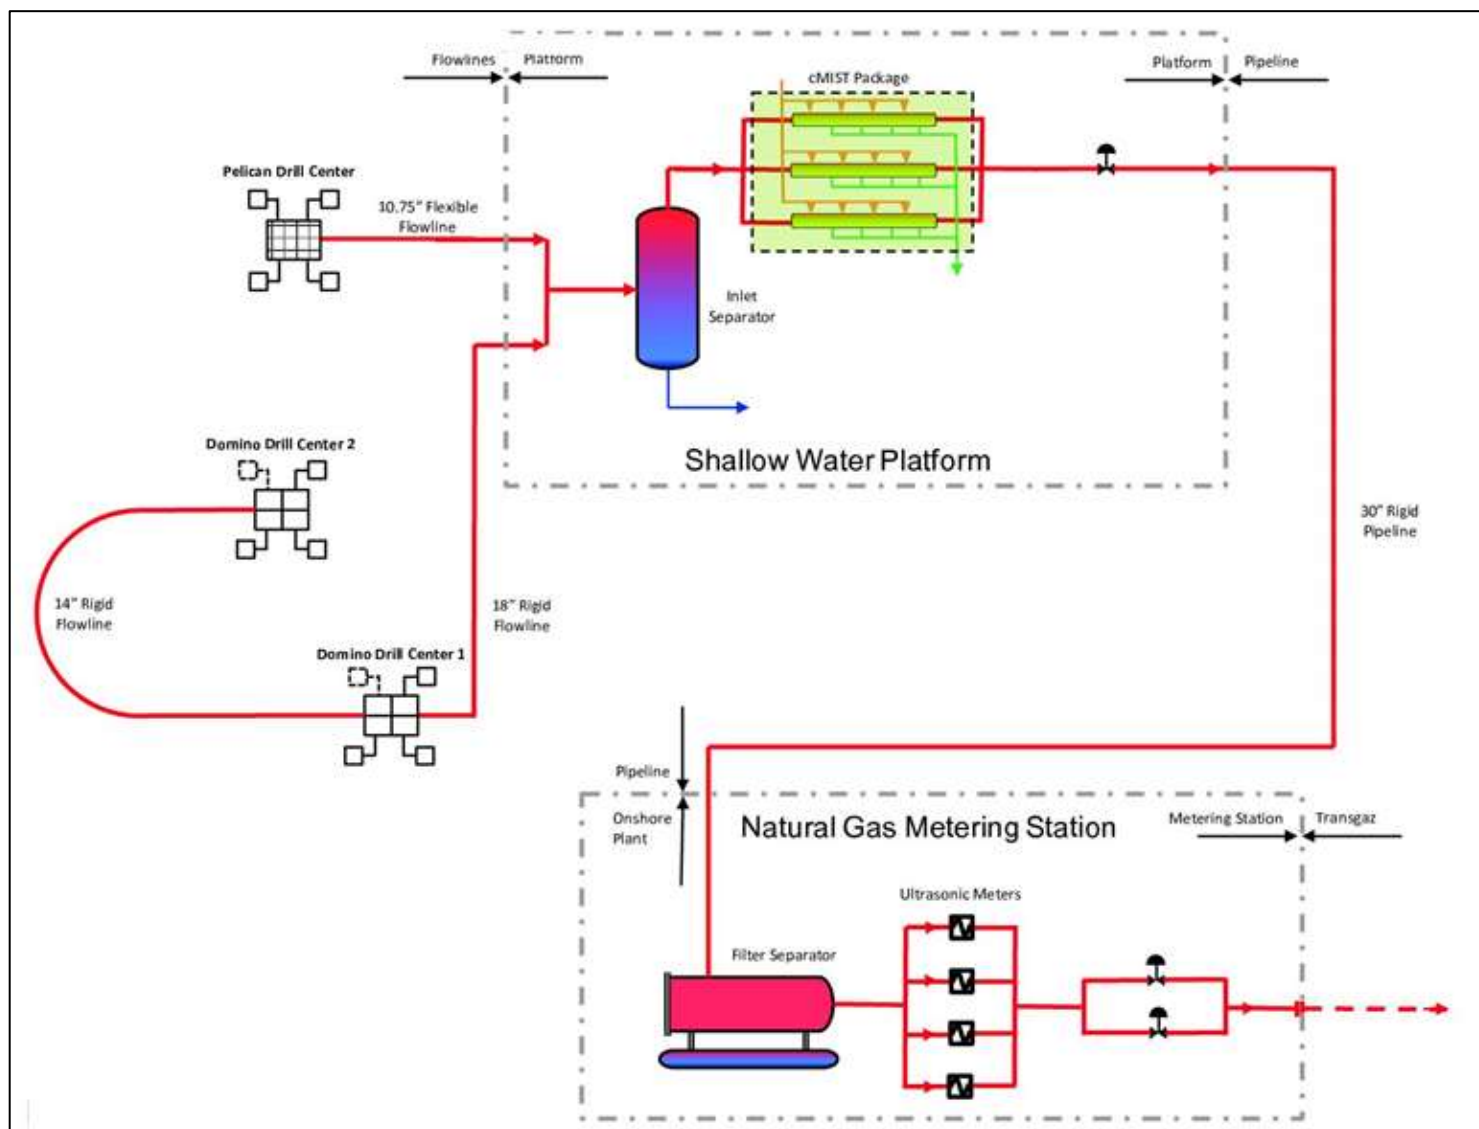

Figure 1 - Neptun Deep Project Overall Scheme

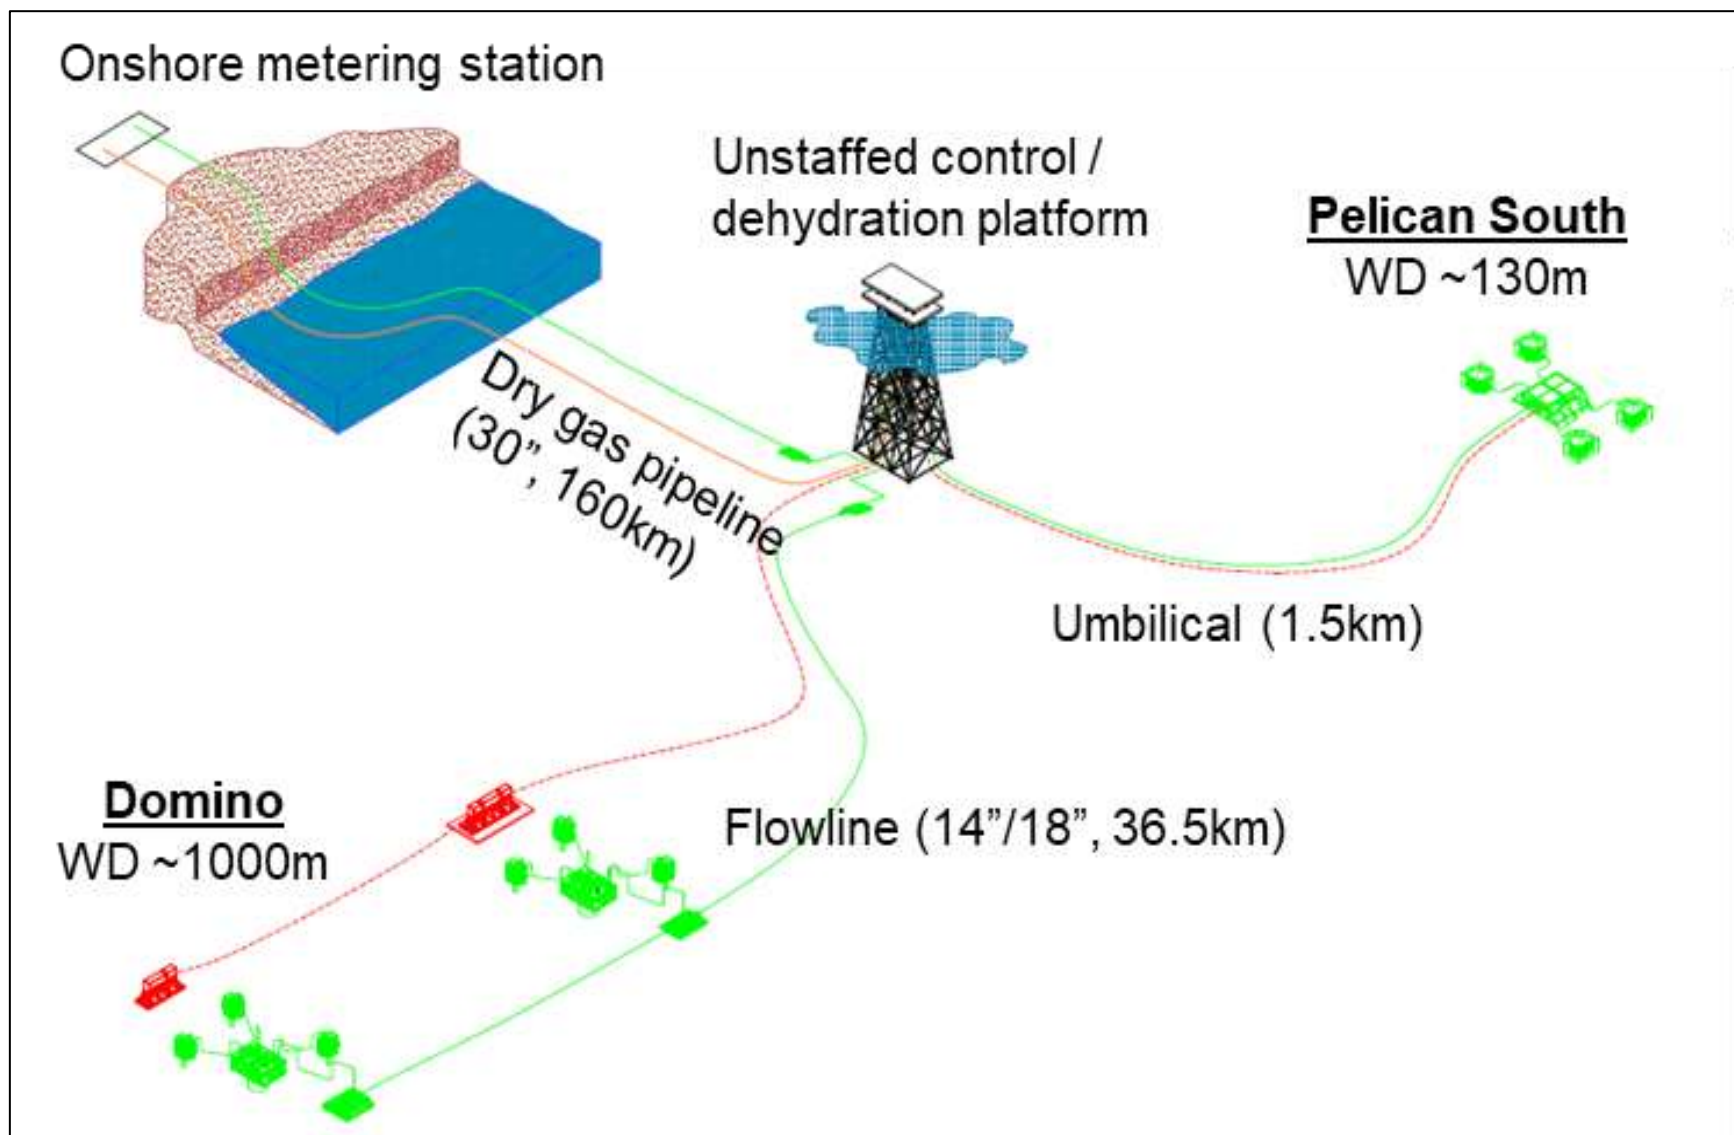

Figure 2 - Neptun Deep General Development Concept

3.2 Justification of project necessity

ExxonMobil Exploration and Production Romania Limited, acting through its Romanian branch office, and OMV Petrom, the Beneficiaries of the Neptun Deep Project, performed initial activities for identification and exploration of hydrocarbons deposits in the Romanian sector of Black Sea in order to analyze their characteristics and to determine if there is feasible production potential from these resources. In 2012, the exploration campaign encountered natural gas reserves in the deep water of the Neptun Block XIX located in the Romanian sector of the Black Sea.

The proposed objective of the Neptun Deep project is to develop the natural gas reserves from the Pelican South and Domino fields and to deliver the gas, treated on the SWP, to the Romanian NTS operated by Transgaz.

The purpose of the Beneficiaries is to sustainably develop the gas resources of the Neptun Deep fields, with a focus on environmental protection during development and operation of the facilities, objective aligned with the Romanian Energy Strategy 2019-2030, with an outlook to 2050. The identified gas consists of very clean gas with high methane, low carbon dioxide (CO₂) and Sulphur, and low content of other hydrocarbons (ethane, propane, butane, etc.).

The project will be developed in accordance with the requirements of local regulations on construction and operation of natural gas infrastructure, including provisions for protection and safety areas applicable to natural gas installations/facilities. The project will be supported by specialized international expertise in similar deep-water projects and will be implemented in accordance with the best industry construction and installation practices and the most recent proven technologies.

The proposed project development includes a series of advantages, such as: minimizing the impact to the local communities due to the location of the SWP and offshore subsea equipment at approximately 160 km from shore and avoiding the current and planned touristic area by using the latest construction methods for shore crossing (microtunneling).

The identification of new natural gas reserves has a positive economic impact by generating additional revenues to the national budget and represents an option for securing the national energy independency and ensuring feasible energy costs for public and private customers.

This gas development would generate a positive impact to the local and national economy, and to the neighborhood local communities. Additional revenues to local budget will be ensured from taxes and contributions required for project development. The project may also contribute to the economic development of the area and represent an opportunity for development of other investments and socio-economic activities within the project area.

The project would generate a positive impact to local road infrastructure due to construction of a new access road (**subject to a separate permitting procedure**) to the onshore NGSM and CCR sites. This new access road will create a new connection of the National Road DN39 to communal road DC4. In addition, the project would contribute to the development of the local power distribution system due to the installation of a power transformer at the NGMS site and extension of power distribution line up to the onshore site (**project subject to a separate permitting procedure**) and thus would represent an opportunity for further connection to power grid of local landowners (currently not connected) from the onshore site area.

The zoning plan regulating the onshore site and project development was approved by the Tuzla Local Council (Decision no 100 from 16th of November 2020) and Constanta County Council (Endorsement no 67 from 27th of November 2019). Copies of these approvals are presented in *Appendix A. Regulatory documents issued by authorities*.

3.3 The value of the investment

The Neptun Deep Project represents a multibillion USD (United States dollars) development by the Project Beneficiaries. The current estimated value of investment for full development of the project is 3,916,000,000 USD.

The final estimated value of the investment will be available after finalizing the Project Cost Estimates, this document being usually attached to the technical documentation for issuance of the construction permit (DTAC).

3.4 Proposed implementation period

The Neptun Deep development will include:

- Environmental and construction/installation permitting activities for issuance of regulatory approvals required to start construction and installation of the Neptun Deep Project;
- Project execution activities including:
 - Procurement, delivery, and transportation of subsea equipment (trees, manifolds), umbilicals, and pipeline;
 - Engineering and procurement, fabrication, and transportation of SWP and pipelines, umbilicals, risers and flowlines;
 - Engineering and procurement of trenchless crossing;
 - Engineering, procurement, fabrication, and transportation of metering station and CCR;
- Construction/installation activities, including:
 - Installation of onshore infrastructure (NGMS, CCR, and other onshore related facilities);
 - Construction of shore crossing microtunnel and installation of GPP and FOC;
 - Installation of offshore Subsea Umbilicals, Risers and Flowlines and SWP;
 - Installation of offshore pipeline, hook-up and commissioning, and start-up;
- Drilling and completion of offshore production wells.

According to the current schedule, it is anticipated that project construction/installation and drilling works will be completed in approximately two years. The final construction and installation schedule will be available at the phase of technical documentation prepared for issuance of construction permit (DTAC file). The duration of the project execution may change depending on unforeseen events (e.g., adverse weather conditions, etc.) that may occur during execution of construction/installation works. The sequences of onshore, shore crossing and offshore construction and installation are summarized in Section 3.6.10 - Execution plan.

The estimated facility design life is 20+ years. At the end of project life, the facilities will be decommissioned in accordance with the regulations in place at that time, and the sites impacted by the project will be restored if applicable (e.g., onshore NGMS and CCR sites).

3.5 Site layout plans

The project site location is described in Section 5 – Description of the project location. The general site location plans of the onshore and offshore components and associated facilities are shown in *Appendix B. General Site Location Plans*.

The layout of onshore and offshore facilities (both permanent and temporary) is shown in *Appendix C. Onshore and Offshore Site Layout Plans*.

3.6 Physical characteristic features of the project

3.6.1 Profile and production capacities

The main design characteristics of the project are summarized below:

- Facility Design Life: 20+ years;
- Availability: > 95%;
- Estimated Annual Mean Gas Production Daily Rate: 19,000,000 m³/day (average of daily production estimated for entire project, including all wells and both Domino and Pelican South gas fields).
- Onshore Connection Pressure: minimum 50 bar; maximum 63 bar.

The entire production system shall be designed with an overall uptime target of 95% (excluding any planned downtime).

The natural gas that will be delivered to the Romanian NTS shall meet the requirements of the Romanian Energy Regulatory Authority (ANRE) Order no. 62/2008. The delivery temperature of sales gas downstream of the onshore metering station is set by ANRE Order no. 92/2018 at a minimum of 0°C. Onshore heaters at the NGMS are required to meet gas delivery temperature requirements.

The initial estimated gas composition from the Domino and Pelican South gas fields is listed in the Table 1.

Table 1 – Initial Estimated Gas Composition

Component	Average Sand A Composition (Domino)	Average Sand B Composition (Domino)	Average Sand A1 Composition (Pelican South)
-	mol %	mol %	mol %
N ₂	0.12	0.18	0.11
CO ₂	0.02	0.08	0.07
H ₂ S	0.00	0.00	0.00
C1 -Methane	99.76	99.59	99.63
C2 - Ethane	0.05	0.06	0.07
C3 - Propane	0.02	0.01	0.04
iC4 -Isobutane	0.01	0.01	0.02
nC4 -Normal butane	0.00	0.00	0.00
iC5- Pentane	0.00	0.01	0.01
nC5 - Normal pentane	0.00	0.01	0.01
C6 - Hexane	0.00	0.00	0.03
C7 - Heptane	0.00	0.00	0.00

There is not expected to be any H₂S present in the gas produced as part of this project development.

3.6.2 Description of the installation and process flows existing on site

The main project related onshore and offshore facilities includes:

- **Domino and Pelican South field subsea infrastructure**, including subsea production wells, production flowlines tied back to the SWP from Domino and Pelican South fields, electrical and hydraulic control umbilicals from the SWP to Domino and Pelican South Drill Centers, and other subsea equipment;
- **The normally unmanned SWP** for processing of the produced natural gas comingled from Domino and Pelican South fields, located in approximately 130 m water depth, and subsea control equipment located on the SWP;
- **One GPP** of approximately 160 km long and 762 mm (30-inch) outer diameter (OD) from the SWP to the onshore NGMS, including a trenchless shore crossing (microtunneling) section;
- **One FOC** of approximately 160 km length routed parallel to the gas production pipeline from the SWP to the onshore CCR, including a trenchless shore crossing (microtunneling) section;
- **An onshore normally unmanned NGMS** for measurement and transmission of processed gas to the Romanian NTS;
- **An onshore CCR** located adjacent to the NGMS site that will serve as the primary operations monitoring and control center for all Neptun Deep project facilities (subsea, shallow water platform, production pipeline, and NGMS);
- **Other onshore permanent facilities/areas included at the NGMS and CCR sites** (e.g., fencing, lighting, parking, landscaping, internal roads, technological platforms, and utilities).

Temporary facilities/works (e.g., temporary road railway crossing, construction works sites) will be required to support construction/installation of onshore facilities and shore crossing microtunnel. The details of temporary facilities/works are presented in Section 10. The onshore temporary facilities will be removed once construction/installation works are completed, and the sites impacted will be restored to their initial state.

The offshore construction/installation works will be supported by specialized construction and installation vessels.

An authorized shore base will be set-up in the Constanta area to support both onshore and offshore project activities and will include port facilities and warehousing to provide storage, loading and unloading, trucking, security, monitoring and tracking of goods, material equipment and supplies.

Personnel required to support shore base and warehousing will include stevedores, crane and forklift operators, truck drivers and warehousing.

Tuzla Airport will provide part-time helicopter services including medevac, search and rescue, and transport of personnel for time sensitive operations.

Operations and maintenance activities will require part-time marine support of a supply vessel that can function as personnel transport from shore to SWP, accommodation vessel, supply vessel with sufficient deck space to transport materials and crane.

The Neptun Deep Project related installations and associated facilities are described in the following sections of this memorandum. The layout plans of the onshore and offshore installations and facilities are attached in Appendix C.

3.6.2.1 Onshore Natural Gas Metering Station and Central Control Room

3.6.2.1.1 Natural Gas Metering Station

The NGMS will be a standalone, normally unstaffed custody transfer metering facility located adjacent to the CCR site and will be used for metering and custody transfer of natural gas to the NTS operated by Transgaz. The NGMS site will be fenced and will be located within S1 site (cadastral number 109216) owned by OMV Petrom with superficies rights for EMEPRL. The NGMS fenced site will have a total surface of approximately 12,000 m².

The Stereo 70 and World Geodetic System (WGS) 84 TM30NE coordinates of NGMS fenced site are listed in Table 2.

Table 2 – NGMS Fenced Site Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE	
	North (m)	East (m)	North (m)	East (m)
1	281550.1	792282.8	4869953.917	391035.316
2	281550.0	792358.7	4869949.163	391111.005
3	281418.9	792358.5	4869818.43	391102.766
4	281419.1	792265.2	4869824.351	391009.731
5	281530.5	792265.4	4869935.437	391016.761

The NGMS will be designed with remote monitoring from the adjacent CCR. The NGMS will measure the rate of natural gas delivered to the Romanian NTS from the Neptun Deep development.

The NGMS site will include only limited buildings and infrastructure necessary for essential operation such as the Local Equipment Room (LER) and gas chromatograph/moisture analyzer shelter. No provisions will be made for office, storage, or shop space within the NGMS fenced area.

Skid package and subassembly prefabrication offsite will be utilized for the majority of NGMS equipment and buildings including pig traps, metering, and valve equipment.

The NGMS site will include separate, dedicated space for the connection to the Romanian NTS which is being permitted separately by Transgaz. ***Transgaz facilities are not part of this project scope.***

There will be no hydrocarbon processing at the NGMS. All separation and processing of the natural gas will take place at the offshore SWP prior to flowing through the production pipeline that transports natural gas to shore at the the NGMS. While no liquids are anticipated to accompany the processed gas arriving at the NGMS during normal operations, an inlet filter/separator equipped with level switches, alarms and manual dump valves will be installed at the NGMS to protect the NGMS meters from potential small amounts of water being sent to the NGMS by process upsets at the SWP.

A pig receiver assembly will be installed at the inlet of the NGMS site to facilitate in-line inspection (ILI) and maintenance pigging of the production pipeline. The pressure rating (design pressure and maximum operating pressure) of the NGMS piping and associated gas handling equipment will match that for the production pipeline pressure rating. Design of the pig receiver assembly will allow for use in the reverse direction (from NGMS to SWP) as may be required for precommissioning de-watering activities.

The NGMS will include a combination flow and pressure control system to control gas deliveries into the Romanian NTS.

The NGMS process installation diagram is attached in *Appendix D. Process flow diagrams*.

The following is a listing of major buildings and equipment included at the NGMS, as shown on the *Onshore Facilities Plot Plan - Appendix C*:

- Gas Quality (chromatograph and moisture analyzer) shelter;
- LER for control, communication, and Integrated Control and Safety System (ICSS) equipment;
- Inlet filter separator;
- Pipeline pig receiver assembly;
- Metering Skid: four (N+1), Nominal Diameter 300, multipath ultrasonic meter runs;
- Two flow control valves (N+1) and block valve station (located outside of NGMS site to the east of the railway);
- Gas venting system (vent stack);
- Heaters (2 skids with 2 heaters each) to meet regulatory gas delivery temperature requirements;
- Wind Sock installed on a metal pipe, supported on a reinforced concrete foundation;
- Distribution panel (steel cabinet placed on reinforced concrete foundation);
- Technological platform;
- Security fence;
- Personnel emergency exit gates;
- Drive-in gate.

All buildings and equipment installed at the NGMS fenced site will comply with the maximum 12 m height limit stipulated by the Zonal Urbanism Plan in force.

All open surfaces inside NGMS fenced site (excluding technological platform) will be covered with crushed gravel to keep the site free from vegetation and provide vehicular access for construction and operations. The NGMS technological platform will be covered by penetrated macadam.

The main buildings and process equipment installed at the NGMS site are described in the following paragraphs. The layout plan of process equipment is shown in *Appendix E. Process equipment layout plans*.

LER Building

LER will consist of one level building that will be skid mounted, prefabricated, pre-wired, and pre-tested. LER building will be used to house the control equipment, motor control center, power distribution, and drill center systems. Additional equipment includes redundant wall-mounted HVAC (Heating, Ventilation, and Air Conditioning) units.

LER building will be a ground floor container building having steel structure with perimeter walls located on individual foundations made of pier and slab, connected with perimeter beams, made of reinforced concrete.

Gas Quality Shelter

The NGMS fenced site will also accommodate a shelter used to house the gas chromatograph, the moisture analyzer, and other gas sampling/collection equipment. The Gas Quality Shelter will be skid mounted,

prefabricated, pre-wired, and pre-tested. The chromatograph shelter will be located on a reinforced concrete slab foundation.

The gas chromatograph and moisture analyzer equipment will monitor gas quality prior to entry in to the Romanian NTS. The design will include ability for remote monitoring of gas quality by the CCR operator.

Inlet filter separator

An inlet filter/separator will be included at the NGMS site for protection of downstream ultrasonic meters and control valves in case of upset conditions and liquids carry over from SWP. The separator will be equipped with level switches, alarms, and manual dump valves for transfer of liquids to the production pipeline pig receiver area. The inlet filter separator will be located on a reinforced concrete mat foundation.

The filter separator will have approximately 4.95 m length and 1.65 m diameter.

Pipeline pig receiver

A pig receiver assembly will be installed at inlet of the NGMS. The pig receiving station will be located on a reinforced concrete mat foundation.

The pressure rating for the receiver assembly will match the production pipeline. Design of the pig receiver assembly shall allow for use in the reverse direction (from NGMS to SWP) as may be required for pre-commissioning de-watering activities.

Metering Skid

A standard solution as the custody transfer meter skids shall be used to support the gas transfer.

Custody transfer gas measurement will be performed by multipath ultrasonic meters. A total of four (N+1) nominal diameter 300 mm metering runs will be installed for gas custody transfer measurement. Each metering run will include the following:

- Dual ultrasonic meters (Fiscal + Check) in a single body with dual sets of transducers;
- Isolation valves and inspection flanges on both ends;
- Flow condition equipment.

A single turbine meter will also be included as an independent means of flow measurement as needed.

The meter runs are designed based on maximum hourly flow rate at maximum anticipated gas velocity at minimum expected pressure. Location and routing of NGMS piping will be optimized to limit operational noise emissions and impact on neighboring communities as required by local Romanian regulations.

All meter runs will be connected to common inlet and outlet piping headers installed below grade.

The metering skid will be located on a reinforced concrete mat foundation. The skid will have approximately 18.5 m length and 13 m width.

Piping System

The process equipment will be connected through a metallic piping system.

NGMS piping will be designed to match the pressure rating of the upstream production pipeline and have Over Pressure Protection equipment.

The NGMS piping design includes provisions to enable "temporary" receipt of gas from the NTS to support commissioning of the offshore production pipeline and SWP during early project start-up. A "temporary" dedicated custody transfer quality meter, complete with moisture analyzer and gas chromatograph equipment, will be installed on the reverse pressurization line for fiscal measurement and accounting of gas volumes obtained from the NTS.

An anode based Cathodic Protection system will be used for protection of all buried NGMS piping and up to a Monolithic Isolation Joint located just downstream of the custody transfer point to the NTS as agreed with Transgaz.

Valves

Control of gas volumes to Transgaz will be via 2 x 100% control valves installed at the NGMS downstream of the metering equipment. The primary purpose of the control valves is to control gas flow through the station based on daily gas nomination setpoint provided by the CCR operator. These valves will also provide pressure override capability to maintain downstream pressure within established operational limits. Control valves may also be utilized for maintenance of upstream gas production line pack to support system availability.

The flow control valves will be placed on reinforced concrete mat foundation.

Natural gas sourced directly from the pipeline, upstream of the ultrasonic meters, will be used to actuate emergency shutdown and control valves. All gas used at NGMS will be measured with dedicated instrument-type meters. Other isolation valves will be equipped with electric actuators.

A block valve will be located to the east of the onshore railroad crossing within S3 site (cadastral number 109659) owned by OMV Petrom with superficies rights for EMEPRL. The block valve station will be located in a buried manhole, made of reinforced concrete. The block valve site will be provided with perimetral protection fence.

The block valve will include a manual full-bore valve, installed below grade, complete with bypass piping. The valve will also provide the ability to isolate the gas pipeline crossing the railroad tracks. The block valve site will be graveled and will have a total surface of 409 m².

The Stereo 70 and World Geodetic System (WGS) 84 TM30NE coordinates of block valve fenced site are listed in the Table 3.

Table 3 - Coordinates of block valve fenced site

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281550,1	792282,8	4869953,917	391035,316
2	281550,0	792358,7	4869949,163	391111,005
3	281418,9	792358,5	4869818,430	391102,766
4	281419,1	792265,2	4869824,351	391009,731
5	281530,5	792265,4	4869935,437	391016,761

The emergency shutdown valves inside the NGMS will serve as the west-of-railroad crossing isolation valve.

Gas Venting System (Vent Stack)

There will be no continuous venting of gas at the NGMS. Scheduled and planned maintenance venting of NGMS gas piping that requires depressurization will be through an atmospheric vent stack located within the fenced NGMS boundary.

The vent system at NGMS enables safe disposal of gas inventory and allows depressurization of NGMS piping to 100 psi (6.9 barg) within 20 minutes.

The vent is designed as a 10 m high stack with 12-inch (305 mm) diameter. The height and diameter of the vent are specified to minimize adverse visual impact of NGMS metering station.

The vent will be located away from overhead electrical lines and ignition sources and designed to ensure proper dispersion of vented gas. The vent stack will be at a minimum distance of 25 m from equipment and fence line.

The vent stack will be located on a direct foundation made of pier and slab and reinforced concrete anchors for taking over the stretching loads from vent anchor strands.

Heater skids

The delivery temperature of sales gas downstream of the onshore metering station is set by ANRE Order 92/2018 at a minimum of 0°C. Onshore NGMS heaters role is to heat the natural gas in order to meet NTS gas delivery temperature requirements especially during the winter cold season. Two skids with 2 heaters each will be provided.

The heater skids will be placed on reinforced concrete foundations. The platform of the four heaters will have approximately 13 m length and 11 m width.

Instrumentation and Controls

A 230-volt AC (Alternating Current) UPS (Uninterruptible Power Supply) system will be installed to support essential loads such as ICSS and telecommunications equipment.

A Flow Computer compliant with Specification for Custody Flow Meters will be installed to calculate gas flow through the ultrasonic meters. Control of overall NGMS operation will be via the Process Control System (PCS). Data from both Flow Computer and PCS will be relayed to the CCR via a dedicated communication link.

The Flow Computer will also control flow through the NGMS. Flow set point will be provided by the pipeline operator at the CCR. The NGMS control system will also provide downstream pressure override capability to comply with contractual gas delivery pressure requirements.

The overall process control and process shutdowns of the NGMS facility will be handled by the project's overall PCS and Safety Instrumented System (SIS), respectively.

Protection and Shutdown

Fire and Gas detection equipment will be installed at the NGMS. Confirmation of fire/gas will automatically trigger a station process shutdown which will isolate NGMS piping from the attached pipeline(s) to protect equipment and neighboring communities. Employing isolation and blowdown of piping sections is the most appropriate firefighting method at the natural gas facility.

Portable fire extinguishers will be located inside LER and other areas around the NGMS.

3.6.2.1.2 Central Control Room

The CCR site will be fenced and located within S1 site (cadastral number 109216) owned by OMV Petrom with superficies rights for EMEPRL. The CCR site will have an estimated total surface of approximately 1,639 m².

The Stereo 70 and WGS84/TM30NE coordinates of CCR fenced site are listed in Table 4.

Table 4 – CCR Fenced Site Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281627.7	792345.2	4870027.481	391102.306
2	281625.8	792352.1	4870025.163	391109.071
3	281617.2	792381.8	4870014.765	391138.163
4	281586.6	792373.5	4869984.756	391128.009
5	281583.5	792372.6	4869981.72	391126.921
6	281575.8	792370.5	4869974.17	391124.355
7	281583.6	792341.8	4869983.708	391096.211
8	281584.4	792338.9	4869984.684	391093.368
9	281585.7	792334.0	4869986.281	391088.561

The following is a listing of facilities included at the CCR site as shown on the Onshore Facilities Plot Plan – Appendix C:

- CCR building, including operator consoles, HMI, and work stations;
- Fresh water tank – aboveground steel tank, insulated and electrically heated for water storage;
- Septic tank – underground tank used for collection of domestic wastewater from sanitary installations;
- Standby generator;
- Internal road and parking area;
- Security fence;
- Personnel emergency exit gates;
- Drive-in gate;
- VSAT Satellite Dish located on steel structure, supported on a reinforced concrete foundation.

A visitable underground rainwater drainage tank made of reinforced concrete will be installed adjacent to the south-east corner of CCR site on a total surface of 25 m².

Open surface inside CCR fenced area and connections to ***project access road (subject to a separate permitting procedure)*** will be concrete made.

All buildings and equipment installed at the CCR fenced site will comply with the maximum 12 m height limit stipulated by the Zonal Urbanism Plan in force.

The CCR will be a standalone building located adjacent to the NGMS site. The CCR will serve as the primary operations control center for all Neptun Deep project facilities (subsea, shallow water platform, production pipeline, and NGMS).

The CCR building will be staffed at all times. Two operators will be stationed at the CCR, these operators will be monitoring and controlling the operations of Subsea, NGMS, and SWP facilities. The Control Room Operator (CRO) will also monitor security aspects of the SWP and the NGMS.

The CCR building will be built up of four prebuild and equipped sections. The building will be a ground floor steel building with perimeter walls, located on individual foundations made of pier and slab, connected with perimeter beams, made of reinforced concrete.

Central Control Room building will mainly include offices, equipment room, control room, permits room, conference room, restroom, supplies storage room, kitchenette, hallway, and waiting area.

The building will have four access ways, three on the north side and one on the west side and will be accessible for disable people. All entrances will be provided with stairs and a ramp of 1.2 m wide and 8% slope. The access doors are double winged.

The CCR building will be provided with HVAC system to ensure temperature, relative humidity and air quality required to provide reliable operation of electronic equipment and acceptable human working conditions. The HVAC equipment will be placed on the roof of CCR building.

3.6.2.1.3 Other permanent facilities/areas included at the NGMS and CCR

Security and Fencing

Anti-cut, anti-climb perimeter security fencing will be installed around both NGMS and CCR. The security fencing will have gates for vehicular access and emergency personnel exits.

The perimetral fence installed at the NGMS and CCR sites will be made of metal poles located at 2.5 m, anchored in concrete foundations. Galvanized steel wire will be fixed between the fence poles. The car access gate will be made of steel and will have 4 m width. The perimeter fencing will be transparent/shadow-proof and will have a maximum height of 2.5 m.

The NGMS security system will include closed-circuit television (CCTV), intrusion detection, card reader access gates and perimeter fencing. Security systems and cameras will be connected to the CCR for alarming and remote monitoring.

The CCR will be located adjacent to the NGMS and share area access control with NGMS. Dedicated security for the CCR area will be provided (access card readers, vehicle access gate with intercom, monitored CCTV system, lighting and anti-cut/anti-climb perimeter security fencing, etc.). The Control Room section of the CCR building will be designated as a restricted area with security badge access doors and requires segregation from space intended for other uses.

Lighting

Lighting will be included at the NGMS and CCR sites to provide a safe working environment for personnel, satisfy operability requirements, and meet applicable codes/standards. The facility design takes into consideration limiting light pollution.

Parking

Parking areas will be provided outdoors within the secured fenced perimeter of the CCR area. Access to the NGMS will be by land vehicle or by walking from the CCR.

Landscaping

A perimeter vegetation screen made of trees will be installed around the entire parcel of land encompassing the NGMS and CCR (S1 site registered under cadastral number 109216 owned by OMV Petrom with superficies rights for EMEPRL). The pipeline protection area constitutes an exception, as the national regulations do not allow planting of trees or any other plants with roots deeper than 50cm.

In addition, each fenced site (NGMS site, CCR site, and block valve site) will be provided with a perimeter green fence made of shrubs.

The species and sizes of the vegetal material used for perimeter vegetation screen will be selected in order to best accomplish an adequate screen of the site. The vegetation screen installed at the onshore facilities will contribute to the minimization of overall visual impact.

All areas outside fenced sites located within S1, S3, and S4 sites owned by OMV Petrom with superficies rights for EMEPRL will be covered by grass.

Internal Roads and Technological Platforms

The following internal roads and technological platforms will be constructed at the NGMS and CCR sites:

- Internal access roads to the NGMS fenced site and Transgaz tie-in point site (***subject to a separate permitting procedure***) to be constructed on an estimated total surface of 1,056 m²;
- Technological platform to be constructed within the fenced NGMS site on an estimated total surface of 1,519.60 m²;
- Concrete platform (including a parking area) to be constructed within the fenced CCR site, around CCR building, on an estimated total surface of 1,177 m².

The NGMS technological platform installed within the NGMS fenced site and internal roads to NGMS site and NTS tie-in point site will be covered by penetrated macadam. The full infrastructure works for construction of NGMS technological platform and internal access road to the NGMS fenced site and NTS tie-in point, will include:

- Improvement of ground foundation on a thickness of 0.50 m, compaction degree of minimum 98% Normal Proctor (PN); the improvement of the ground foundation will be done by desensitization to wetting and will include:
 - Removal by digging on approximately 50 cm of the loess layer;
 - Preparing the so - called "loss pillow" by reusing the material excavated with re-installation in successive layers of 15 - 20 cm thick after compaction.
- Installation of a waterproof geotextile;
- Installation of 20 cm layer of ballast optimal mixing, sort 0-63 mm, according to SR EN 13242 + A1: 2008, compaction degree of min. 98% PN;
- Installation of 20 cm layer of crushed stone, sort 0-63 mm according to SR EN 13242 + A1, compaction degree of minimum 98% PN;
- Installation of 10 cm layer of penetrated macadam.

A concrete platform will be constructed around CCR building, up to the limit of the CCR fence. This area will include a parking area. The infrastructure of concrete area around CCR building will include:

- Improvement of ground foundation on a thickness of 0.50 m, compaction degree of minimum 98% PN;
- Installation of a waterproof geotextile;

- Installation of 20 cm layer of ballast optimal mixing, sort 0-63 mm, according to SR EN 13242 + A1: 2008, compaction degree of minimum 98% PN;
- Installation of 20 cm layer of crushed stone, sort 0-63 mm according to SR EN 13242 + A1, compaction degree of minimum 98% PN;
- Installation of kraft paper;
- Installation of 20 cm road concrete layer.

The concrete area will be framed by monolith kerb (curbs) with dimensions 20 x 25 cm, placed on a concrete foundation. For drainage of the rainwater from the concrete area, 1% and 2.5% transversal slopes will be adapted towards ditches.

The details of internal roads, NGMS technological platform, and CCR concrete platform are shown in *Appendix F. Details for other onshore permanent facilities*.

Utilities

The NGMS design premise is a normally unmanned facility. The CCR will be a single building and will be manned by a minimum of two operators at all times. No water or sewer connections to local utilities are planned for NGMS and CCR sites. The CCR site will be provided with standalone freshwater tank and domestic wastewater (septic) tank. In addition, a rainwater tank will be installed adjacent to the south-east corner of CCR site for collection of rainwater inside CCR fenced site.

Power for the NGMS and CCR sites will be sourced from the local provider (ENEL). A standby diesel generator will be installed at the CCR site and will provide backup power to both CCR and NGMS if the local provider power network is down.

Communication between the LER and CCR, and then between the CCR and SWP will be via a direct link FOC. A satellite dish will also be installed at the CCR to provide backup VSAT based communications with SWP.

Telephone and internet service will be sourced from local providers.

Details on the delivery and connection to utilities of the onshore components are presented in the **Section 3.6.5**.

3.6.2.2 Gas Production Pipeline and Fiber Optic Cable

3.6.2.2.1 Gas Production Pipeline

After processing the natural gas at the SWP, an approximately 160 km long and 762 mm (30-inch) diameter GPP will transport it to the onshore NGMS.

The production pipeline will terminate at the onshore NGMS pig receiver. From SWP to NGMS, the gas production pipeline route includes the following components/sections:

- A pig launcher and riser installed on the SWP;
- An offshore pipeline section;
- A trenchless shore crossing section;
- An onshore pipeline section, including a railroad crossing, a valve station located outside NGMS fenced site to the east of the railroad, and several road crossings; and

- A pig receiver installed at the NGMS.

The full route of the production pipeline from offshore SWP to onshore NGMS is shown in the alignment sheets attached in Appendix C.

GPP will also include a pipeline end termination (PLET) installed at the SWP and one subsea isolation valve (SSIV) assembly, remote of the SWP at the extent of the 500 m safety zone and at a water depth of 120 m. The assembly shall consist of a 30-inch (762 mm) actuated ball valve (fully piggable) controlled by direct hydraulics from the platform hydraulic power unit. It shall also be protected by a dedicated over-trawable SSIV protection structure.

The GPP will be provided with the following characteristics:

- Carbon steel pipeline;
- External corrosion coating, and internal flow coating;
- Concrete weight coating;
- Anodes, flanges/connectors, etc.;
- Riser, tie-in spools, trenchless shore crossing, onshore pipeline to NGMS.

The GPP is sized to support the designed production rates. The overall pipeline design parameters are summarized below:

- Pipe OD: 762 mm (30-inch);
- Pipeline length: approximately 160 km (approximately 1 km will be located onshore);
- Material type: DNV SAW 450;
- Piggable requirements: Yes;
- Specified minimum yield strength: 450 MPa;
- Wall thickness (class 2): 30 mm (class 2);
- Wall thickness (class 1): 17.5 mm;
- Internal corrosion allowance (external corrosion allowance only applicable in the splash zone): 2 mm;
- Design pressure: 139 barg;
- Internal fluid density (gas): 34 - 110 kg/m³;
- Maximum design temperature: 55°C;
- Maximum operating temperature: 45°C;
- Minimum design temperature: -29°C;
- Expected flowing pressure: from 127 barg (at the SWP) to 75 barg (onshore);
- External corrosion coating: Fusion-bonded Epoxy and concrete weight coating /three-layer extruded polyethylene (3LPE);

- Internal coating: flow assurance coating to a thickness of approximately 80 (-0/+25) microns;
- Water depth range: 0 ÷ 137 m.

The system design pressure can accommodate a line pack (actual gas volume stored in the piping system at a certain time) of up to 50 bars in the production pipeline. However, a line pack of approximately 20 bars is expected to be maintained in order to support the operational flexibility of the production system.

The offshore section of the GPP will utilize variations in steel pipe wall thickness, concrete weight coating, and trenching (limited to the near-shore area) to maintain on-bottom stability.

The gas production pipeline will be internally coated for flow assurance, externally coated for corrosion control, and partially externally coated with concrete for buoyancy and stability.

The proposed offshore GPP route is crossing 3 faults and some possible cables/wires, as shown in the Pipeline Alignment Sheets.

As the pipeline approaches the coastline, the sea floor turns rocky. In this area, portions of the pipeline will be placed in a trench for stability.

For the purpose of installation and for protection during operation, the nearshore subsea section of the pipeline will be installed in a trench for a length of approximately 1,600 m between the offshore end of the microtunnel and the 20 m water depth mark (Appendix C). The near shore pipeline installation will require anchored vessels.

The offshore section of 30-inch (762 mm) GPP and FOC will occupy an underwater area of **638,080 m²**.

A selection of Stereo 70 and WGS coordinates along the offshore production pipeline route is provided below in Table 5.

Table 5 – Selection of coordinates along GPP offshore route

No.	Stereo 70 Coordinate System		WGS84 TM30NE Coordinate System	
	North (m)	East (m)	North (m)	East (m)

12	298595.207	947777.930	4877377.046	547092.346

The GPP will under cross the Romanian shore in an area where the coast is shaped like a cliff. Because of this local topography and due to increased efforts to keep the ROSCI 0273 Cape Tuzla marine protected area, the beach and the cliff pristine, the gas production pipeline and the fiber optic cable encased in concrete pipe will under cross the coastline via an approximately 1 km long concrete microtunnel. The details of the shore crossing are presented in Section 3.6.2.2.3.

Between the shore crossing and the NGMS, a short onshore pipeline section will complete the GPP system to the pig receiver at the inlet of the NGMS. The onshore pipeline route will extend from the onshore shore

crossing microtunnel entry point (located on the S4 site owned by OMV Petrom with superficies rights for EMEPRL) to the NGMS at the first weld upstream of the onshore NGMS pig receiver.

The Stereo 70 and WGS84/TM30NE coordinates of onshore GPP route are listed in Table 6.

Table 6 – Onshore GPP Route Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281507.9	792349.1	4869907.766	391098.849
2	281507.7	792374.7	4869905.996	391124.368
3	281506.6	792519.6	4869896.014	391268.808

8	281501.7	793136.4	4869853.304	391883.637
9	281501.1	793212.3	4869848.051	391959.295
10	281500.0	793215.7	4869846.746	391962.618

From the onshore microtunnel entry point until the above ground pig receiver assembly located inside the fenced NGMS site, the onshore section of production pipeline will be buried in a 2 m deep trench.

The onshore pipeline requires a burial depth to top of pipe of 1.25 m below natural ground level. The pipeline will maintain a minimum separation of 0.5 m from any foreign pipeline or utility in any direction. The wall thickness for the onshore pipeline is 30 mm and the pipe is fusion-bonded epoxy coated.

The onshore section of the underground GPP will be mainly installed on the private land owned by OMV Petrom. Local roads and railway line Constanta – Mangalia will be undercrossed by the onshore section of the GPP and FOC (see details in the Section 3.6.2.2.4).

The onshore gas production pipeline has been designed and will be installed in accordance with the provisions of Technical Norm for design and execution of the upstream gas pipelines approved by the Decision no 1220/2006 issued by Romanian Natural Gas Regulatory Authority – ANRGN (presently ANRE).

Protection and safety zones within the area of upstream gas pipelines and associated installations, as well as the safety distances and construction interdictions/restrictions are regulated by the Technical Norms. In accordance with the provisions of this Technical Norms, the following protection and safety zones of the onshore gas pipeline will be ensured for the onshore pipeline and related installations (e.g., NGMS):

- **A minimum protection zone of 6 m width** on each side of the pipeline measured starting from the pipeline axis). No construction works are allowed to be executed within this area;
- **A safety zone of 20 m width** on each side of the pipeline measured starting from the pipeline axis. The area will be ensured to grant the access of the pipeline operator for production, maintenance, and regular monitoring activities, including access in case of emergency. Construction interdictions will be implemented within this area (e.g., housing, office spaces, etc.).
- **A safety zone of 200 m width** on each side of the pipeline measured starting from the pipeline axis. A written endorsement issued by the pipeline operator (ExxonMobil Exploration and Production Romania Limited) must be obtained as part of the construction permit procedure for approval of any new construction within this zone.

Restrictions/interdictions within the 20 m safety distance

According to current regulations in force, buildings such as dwellings, guesthouses, hotels, offices cannot be built within 20 m distance from each side of the pipeline axis.

For the entire area allocated to the safety zone of 40 m (20 m width on each side of pipeline axis), will be implemented interdictions for buildings construction (e.g., dwellings, guesthouses, hotels, administrative buildings, office buildings, etc.). To limit the impact on future development of adjacent properties because of the interdictions/restrictions related to the protection and safety zone of pipeline and associated installations, the Beneficiaries purchased additional parcels to the ones strictly required for construction of the gas pipeline and associated installations (e.g., NGMS). ***Thus, the restrictions to build generated by the installation of the pipeline, apply only on the land surfaces owned by the beneficiaries of the Neptun Deep Project.***

Restrictions/interdictions within the 200 m safety distance

According to the applicable regulations (ANRGN Decision no 1220/2006), a written endorsement must be issued by the pipeline operator for any new construction planned to be built within the safety zone of 200 m width on both sides of the pipeline and associated installations. The pipeline operator endorsement will be included on the list of approvals/endorsements required through the Urbanism Certificate.

The scope of the endorsement is to check the compliance of the new construction to the minimum safety distance criteria listed in the Technical Norm for design and execution of the upstream gas pipelines approved by the Decision no 1220/2006 issued by ANRGN. As per current applicable regulations, no tax/tariff will be required by the pipeline operator for issuance of the written endorsement.

The only construction restrictions applicable to the landowners located within the 200 m width safety zone include: construction of nuclear plants, munitions and explosive material warehouses or shooting ranges.

Any other restrictions for construction of buildings such as: houses, guesthouses, hotels, administrative buildings, recreational buildings, etc. are only limited within the land owned by the beneficiaries. In this sense, no housing or touristic buildings (guesthouses, hotels, etc.) construction restrictions will be implemented for the properties from the safety zone of 200 m width that are located adjacent the property limits owned by the project beneficiaries.

3.6.2.2.2 Fiber Optic Cable

A FOC will be routed parallel to the production pipeline to provide communication between the offshore normally unstaffed SWP and the operators working from the onshore staffed CCR and VSAT control for back up and redundancy.

The FOC will enable control of the offshore facilities and wells from the CCR and surveillance through cameras on the SWP. Internet access will be provided in the SWP local equipment room and Wi-Fi on the SWP (as part of the control system) will allow for process surveillance via local hand-held devices while operations and maintenance (O&M) personnel are present.

The FOC route includes:

- A riser pulled through a J-tube on the SWP;
- An offshore section;
- A trenchless shore crossing;
- An onshore underground splice;

- An onshore FOC section, including a railroad crossing, several road crossings, and connection to the CCR.

The FOC splice box will be located at the onshore side of the shore crossing to splice the onshore FOC to the offshore FOC.

The FOC will be installed along and adjacent to the pipeline alignment from the SWP to the onshore CCR located adjacent to the NGMS.

The FOC, running between onshore CCR and the SWP, follows a similar route alignment as the production pipeline with an offset of 30 m along most of the offshore route. The offset is increased up to approximately 52 m when approaching the platform to accommodate the respective tie-in locations at the platform. For the onshore and shore approach sections, the FOC is routed in close proximity of the pipeline as the FOC will be installed in the same trench and tunnel.

The FOC route from the SWP to the onshore CCR is shown on the Production Pipeline Alignment Sheets (Appendix C).

The offshore section of the FOC will be buried to a target depth of 1.0 m below seabed with 0.5 m as a minimum depth. In areas of faults, the seabed shall not be trenched for burial. The faults crossing configuration will consider the cable accounting for trawl gear protection. A selection of coordinates along FOC offshore route is presented below in Table 7.

Table 7 – Selection of coordinates along FOC offshore route

No.	Stereo 70 Coordinate System		WGS84 TM30NE Coordinate System	
	North (m)	East (m)	North (m)	East (m)
1	281233.000	794081.700	4869527.710	392810.300
2	280513.737	796410.055	4868667.282	395087.798
3	280292.711	797659.102	4868370.264	396319.872
4	280300.277	798502.711	4868326.075	397161.630
5	289854.192	863077.695	4873885.465	462134.117
6	293134.973	885785.732	4875758.026	484972.197
7	293738.935	891919.520	4875982.198	491123.321
8	294672.530	899719.837	4876432.098	498955.631
9	298735.133	933968.167	4878368.672	533339.041
10	298878.188	940964.647	4878079.318	540320.105
11	298567.033	947767.469	4877349.191	547079.923

At the trenchless shore crossing, the FOC will be installed in a High-Density/PE100 Polyethylene (HDPE/PE100) conduit of 250 mm diameter preinstalled in the crossing tunnel during tunnel construction and installation. The details of the shore crossing are presented in Section 3.6.2.2.3.

The onshore FOC conduit will be installed with the onshore GPP in a trench. The coordinates of onshore route were presented in Section 3.6.2.2.1.

The main design parameters of the FOC between SWP and the CCR are summarized below:

- Estimated length: 160 km;
- Number of fiber optic pairs: 12 pairs (24 core);
- Type of system: repeaterless;
- Operating wavelength: 1,550 nm (Nanometers);

- Single mode fiber optic type: single mode, Non-Dispersion-Shifted Fiber G.652 or G.654;
- Overall design: loose tube, armoured;
- Maximum optical loss @ 1,550 nm: 0.181 dB/km;
- Riser type for SWP: static (j-Tube);
- Minimum offshore burial depth: 0.5 m;
- Target offshore burial depth: 1 m;
- Shore crossing: pre-installed conduit;
- Maximum loss per splice: 0.1 dB (decibels).

The cable will have a minimum life span rating of 25 years in the subsea environment in which it is installed.

A VSAT backup system will be utilized for the project to pass critical Internet Protocol traffic between the CCR and the SWP upon loss of fiber optic communications.

3.6.2.2.3 Shore Crossing

The production pipeline and fiber optic cable shore crossing are planned as a bundle installation using the microtunneling method and will under cross the local road De 259, the cliff and the beach.

The shoreline is crossed at the designated landfall site located in Tuzla shore area. The landfall will be constructed as a trenchless shore crossing by means of a two-meter diameter pipejacking tunnel. The microtunnel execution plan will require anchored vessels. The microtunneling construction method was selected rather the more traditional open cut method in order to minimize as much as possible the environmental impact associated with shore crossing construction.

The shore crossing will be constructed to provide a landfall for the 762 mm (30-inch) production pipeline of the Neptun Deep project as well as a FOC (in a protection conduit of a 250 mm diameter) for data communication.

The shore crossing microtunnel will be constructed over a length of 890 m between the onshore starting point at kilometric point (KP) 156.965 of the pipeline route and KP 156.075 at the offshore end. The onshore entry point of the microtunnel will be located within the private land (S4 site) owned by OMV Petrom with superficies rights for EMEPRL. The exit point of the microtunnel will be located within the coastal waters of the Black Sea. The public local unpaved road De269, seafront (private domain of Tuzla locality) and beach (public domain of National Administration "Apele Române" – Water Basin Administration "Dobrogea – Litoral") will be undercrossed by the microtunnel.

The calculated area occupied by the landfall crossing is of 2,136 m² from which:

- 678 m² is in the onshore area;
- 1,458 m² is in the nearshore area.

Stereo 70 and World Geodetic System (WGS) coordinates for microtunnel entry point and exit point are provided in Table 8.

Table 8 – Microtunnel entry point and exit point coordinates

Location	Stereo 70 Coordinate System		WGS84 TM30NE Coordinate System	
	North (m)	East (m)	North (m)	East (m)
Onshore Entry point	281495.4	793230.7	4869841.70	391977.73
Offshore Exit point	281233.0	794081.7	4869527.71	392810.30

The main design parameters of tunnel alignment include:

- Length of drive: 890 m;
- Maximum depth: 25 m;
- Radius: 2,500 m;
- Exit angle: 2°.

The details of the shore crossing are shown in Appendix C.

The key dimensions of the pipeline and FOC at the shore crossing are:

- Production pipeline:
 - OD: 762 mm (30-inch);
 - Wall thickness: 30 mm;
 - Material: DNV 450 FDU;
 - Density: 7,850 kg/m³;
 - External coating: 3.4 mm 3LPE.
- Conduit for fiber optic cable:
 - Diameter: 250 mm;
 - Wall thickness: 22.7 mm (Standard Dimensional Ratio - SDR11);
 - Material: HDPE / PE100.

The cross section of the shore crossing microtunnel is shown in the Figure 3.

Figure 3 – Shore crossing cross – section

3.6.2.2.4 Local Roads and Railway Onshore Crossing

The communal road DC 4, local unpaved roads De 277 and De 259/4 and Constanta – Mangalia railway line will be undercrossed by the onshore section of the production pipeline and fiber optic cable (Appendix C). Local roads and railway under crossings will be installed by auger bore or horizontal directional drilling methods. The pipeline will be protected from corrosion by anticorrosion coating and a cathodic protection system with test stations.

Stereo 70 and WGS84/TM30NE coordinates of the area impacted by the local roads and railway crossing are listed in Table 9.

Table 9 – Local Road and Railway Crossing Corridor Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE	
	North (m)	East (m)	North (m)	East (m)
1	281493.6	792471.8	4869887.930	391218.410

8	281514.3	792518.5	4869905.710	391266.250

3.6.2.3 Domino and Pelican South Fields Offshore Infrastructure

The proposed objective of the Neptun Deep project is to develop the natural gas reserves from the Domino and Pelican South.

The main components of the Domino Field include:

- Gas production wells drilled and connected to two subsea manifolds in a cluster arrangement. The wells and subsea manifolds will be located at 2 separate drill centers, DODC1 and DODC2, connected by a 14-inch flowline and electrical hydraulic control umbilical;
- 1 dual diameter (14-inch (355.6 mm) /18-inch (457.2 mm) of approximately 36.5 km long rigid steel flowline tied back to the SWP. For hydrate mitigation purposes, the 18-inch /14-inch flowline will be DEH and insulated;
- 2 electrical and hydraulic control umbilical segments: 1 between the SWP and DODC1 and 1 between DODC1 and DODC2. The umbilicals will also supply chemicals to the subsea facilities. Flying leads will then connect the umbilical from the subsea distribution unit at the drill center to the wells and manifold;
- Subsea pig launchers will be included to allow pigging of the flowlines to the SWP;
- Suction pile foundations will be used for manifolds;
- Mud-mat foundations will be used for umbilical termination assembly / subsea distribution unit (SDU).

The main components of the Pelican South Field include:

- Gas production wells drilled and connected to a subsea production manifold in a cluster arrangement at PSDC1 drill center. The wells and subsea manifold will be equipped with over-trawl protection structures for protection from fishing activity;
- One 10.75-inch (273 mm) diameter heated flexible flowline tied back ~1.5 km to the SWP from PSDC1; the flowline will be buried for protection from fishing activity;
- Electrical and hydraulic control umbilical between the SWP and PSDC1. An umbilical will also supply chemicals to the subsea facilities. The umbilical will be buried for protection from fishing activity. Flying leads will then connect the umbilical from the SDU at the drill center to the wells and manifold;
- Due to the presence of shallow gas throughout the Pelican South field, the foundation for the manifold and trawl protection will be a mud-mat with skirt penetrating no more than 4 m.

3.6.2.3.1 Gas Production Wells

The current development drilling plan consists of drilling and completing of maximum 12 subsea gas production wells (8 planned wells and 4 optional wells), respectively:

- 5 planned + 1 optional wells will be drilled to 3,000 m vertical depth from DODC1 and DODC2 drill centers (3 wells/drill center) at Domino field in 800 – 1,100 m water depth;
- 3 planned + 1 optional wells will be drilled to 3,400 m vertical depth from a single drill center (PSDC1) at Pelican South field in 120 – 130 m water depth;
- 2 optional wells (these wells will be separately authorized if their drilling will be decided in the future).

The production wells that are subject to this presentation memorandum are presented below in Table 10.

Table 10 – Domino and Pelican South Production Wells

Drill Center Name	Well Name	Well Acronym	Well Drilling Status	Production Wells Coordinates			
				Stereo 70		WGS84 / TM30NE	
				North (m)	East (m)	North (m)	East (m)
DODC1	Domino 1-1	D1-1	Optional Well	280042.05	964337.03	4857867.47	562446.693
DODC1	Domino 1-2	D1-2	Planned Well	280051.98	964319.45	4857878.449	562429.79
DODC1	Domino 1-3	D1-3	Planned Well	280076.85	964333.47	4857902.363	562445.294
DODC2	Domino 2-1	D2-1	Planned Well	279056.05	959247.85	4857199.066	557315.098
DODC2	Domino 2-2	D2-2	Planned Well	279080.81	959262.09	4857222.858	557330.814
DODC2	Domino 2-3	D2-3	Planned Well	279090.88	959244.59	4857233.971	557313.998
PSDC1	Pelican Sud 1-1	PS1-1	Planned Well	297886.85	948232.72	4876642.666	547501.534
PSDC1	Pelican Sud 1-2	PS1-2	Planned Well	299322.42	949911.44	4877969.51	549263.006
PSDC1	Pelican Sud 1-3	PS1-3	Planned Well	299482.55	948653.75	4878206.755	548019.63
PSDC1	Pelican Sud 1-4	PS1-4	Optional Well	299329.51	947062.06	4878152.553	546424.078

The well design concept was mainly based on data collected during the drilling exploration program and the reservoir production requirements for Domino and Pelican South. The well design life is required to be 20 years.

3.6.2.3.2 Drilling Centers

The Domino drilling centers will be arranged as traditional deep-water clusters, while the Pelican South field will be configured in a cluster arrangement with trawl-resistant coverings over each structure and protective mattresses or alternative type of cover as needed over jumpers and flying leads. The orientation of the drilling centers will take into consideration the general flowline/umbilical approaches, along with the assumed drilling rig mooring pattern. The layouts of the drilling centers will accommodate installation and precommissioning considerations along with future expansion possibilities.

The layout of each drill center is shown in the following drawings:

- Drawing no. ROND-EW-YDPAL-22-0012-B: DODC1 drill center layout;
- Drawing no. ROND-EW-YDLAY-22-0005-B: DODC2 drill center layout;
- Drawing no. ROND-EW-YDLAY-22-0003-B: PSDC1 drill center layout.

The above-mentioned layout plans are presented in Appendix C.

The underwater areas that will be occupied by the Domino and Pelican South drill centers are summarized below:

- 8,686 m² represents the area occupied by DODC1 and related subsea equipment (manifold, trees, etc.);
- 8,722 m² represents the area occupied by DODC2 and related subsea equipment (manifold, trees, etc.);

- 11,088 m² represents the area occupied by PSDC1 and related subsea equipment (manifold, trees, etc.).

A selection of Stereo 70 and WGS coordinates for Drilling Centers (DCs) locations is provided in Table 11.

Table 11 - SWP and Drilling Centers Coordinates

Location	Stereo 70 Coordinate System		WGS84 TM30NE Coordinate System	
	North (m)	East (m)	North (m)	East (m)
PSDC1	299471.109	948682.675	4878194.000	548048.000
DODC1	280058.975	964335.021	4857884.918	562445.992
DODC2	279072.992	959245.900	4857216.520	557314.550

The configuration of the drilling centers will include dual pressure multiplexed electro-hydraulic control system with comms on power for communication.

The DODC1 and DODC2 will be provided with SDU and Umbilical Termination Assembly (UTAs) at each drilling center sharing the same foundation structure. The connection between UTA and SDU will be via flying leads.

The PSDC1 will be provided with hydraulic and chemical lines from the umbilical connected directly to the manifold with a multi-bore connector. The distribution of hydraulic, chemicals, electrical power, and control signals will be integrated into the manifold.

3.6.2.3.3 Domino and Pelican South Production Flowlines

The main characteristics of production flowlines are summarized below:

- 1 dual diameter Domino DEH production flowline of approximately 36.5 km long ~26 km long, 457.2 mm (18-inch) OD DEH flowline from the SWP to DODC1 and ~10.5 km long, 355.6 mm (14 inch) OD DEH flowline from DODC1 to DODC2 including a Flowline End Termination (FLET) at the SWP, an In-line Tee Assembly (ITA) at DODC1 where the flowline diameter changes, and a FLET at DODC2. The route from Domino to the SWP requires crossing a scarp along the continental shelf.
- 273 mm (10.75-inch) internal diameter (ID) Pelican South EH flexible production flowline of ~1.5 km long from the Pelican field to the SWP including a subsea connection to the manifold and a topside termination on the SWP.

The underwater areas that will be occupied by the production flowlines are summarized below:

- 73,260 m² represents the area occupied by Domino flowline;
- 2,952 m² represents the area occupied by Pelican South flowline.

Domino Direct Electric Heating Flowline

Open DEH flowlines will be used at Domino to provide active hydrate management by means of electrical heating. The production DEH system will include:

- Power, control, and monitoring equipment (SWP and CCR components);
- 1 dual core or coaxial riser cable with pull head, bend restrictors, and J-tube seal (if applicable);
- 1 subsea junction box;
- 1 or 2 armored feeder cable(s) depending on cable core design;

- 1 piggyback cable of approximately 37 km long with trawling protection and attachment system;
- 2 flowline terminations (1 at SWP, 1 at DODC2);
- 2 Current Transfer Zones (CTZs) with concrete mattress foundations to ensure CTZ sits proud of seabed.

The dual diameter Domino DEH production flowline has the following main characteristics, but not limited to:

- Carbon steel pipeline;
- Corrosion and thermal insulation;
- Anodes, flanges/connectors, etc.;
- Riser and tie-in spools;
- Open DEH system.

The route of the Domino DEH flowlines has been determined based on the findings of a flowline routing study conducted by a third-party contractor. The routing study included assessment of the route survey data (e.g., geophysical survey), flowline data, gas field details, SWP and manifolds tie-in details.

The route of the Domino flowlines from SWP to DODC1 and from DODC1 to DODC2 is shown in Appendix C.

A selection of coordinates along the route of the Domino flowlines is shown in Table 12.

Table 12 - Selection of coordinates for Domino production flowline

Pelican South Electrically Heated Flowline

Open Electrically Heated (EH) flowlines will be used at Pelican South to provide active hydrate management by means of electrical heating. Pelican South EH flexible production system will be provided with power, control, and monitoring equipment (SWP and CCR components).

The Pelican South EH production flowline will have the following main characteristics, but not limited to:

- Pull head, bend restrictors, and J-tube seal (if applicable);
- Power, control, and monitoring equipment;
- Fiber optic temperature and condition monitoring;

- Option: combine the EH flexible flowline and Pelican South static umbilical into a single Integrated Production Bundle.

The route of the Pelican EH flowline and umbilical between the SWP and the Pelican South manifold has been determined based on the findings of the flowline routing study conducted by a third-party contractor. The routing study included assessment of route survey data (e.g., geophysical survey), flowline data, Pelican South field details, SWP and Pelican manifold tie-in details.

The routes of the flowline and umbilical are straight for most of the route length except at the approach to the Pelican manifold, with the umbilical routed parallel at a distance of 30 m from the flowline route centerline.

The route of the Pelican flexible flowline is shown in Appendix C.

A selection of coordinates along the route of the Pelican South flowline is shown in Table 13.

Table 13 - Selection of coordinates for Pelican South production flowline

3.6.2.3.4 Domino and Pelican South Umbilicals

The Domino and Pelican South subsea systems will be monitored and controlled using electrical and hydraulic control systems connected to the SWP by dedicated umbilical control connections.

The Domino subsea system will include two electrical and hydraulic control umbilical segments: one between the SWP and DODC1 and one between DODC1 and DODC2. The umbilicals will also supply chemicals to the subsea facilities. Flying leads will then connect the umbilical from the SDU at the drill center to the wells and manifold.

The Pelican South subsea system will include an electrical and hydraulic control umbilical between the SWP and PSDC1. An umbilical will also supply chemicals to the subsea facilities. The umbilical will be buried for protection from fishing activity. Flying leads will then connect the umbilical from the SDU at the drill center to the wells and manifold.

The main characteristics of umbilicals are summarized below:

- Domino infield static umbilical of approximately 6 km long from DODC1 to DODC2;
- Domino slope static umbilical of approximately 26.5 km long from the SWP to DODC1;
- Pelican South static umbilical of approximately 1.5 km long from the SWP to PSDC1.

The underwater areas that will be occupied by the Domino and Pelican South umbilicals are summarized below:

- 2,952 m² represents the area occupied by SWP - PSDC1 umbilical;
- 52,280 m² represents the area occupied by SWP – DODC1 umbilical;
- 12,040 m² represents the area occupied by DODC1 – DODC2 umbilical.

The routes of the umbilicals between the SWP and both Domino and Pelican South manifolds have been determined based on the findings of specific routing studies conducted by a third-party contractor. The routes of the Domino and Pelican South umbilicals are shown in the following drawings and attached in Appendix C:

- Drawings no. ROND-EW-YDPAL-22-003 ÷ ROND-EW-YDPAL-22-008: Domino Umbilical SWP-DODC1 alignment sheets;
- Drawings no. ROND-EW-YDPAL-22-009 ÷ ROND-EW-YDPAL-22-010: Domino Umbilical DODC1-DODC2 alignment sheets;
- Drawing no. ROND-EW-YDPAL-22-0001: Pelican Umbilical alignment sheet.

A selection of coordinates along the routes of the Domino and Pelican South umbilicals are shown in Table 14 and Table 15.

Table 14 - Selection of coordinates for Domino umbilicals

Table 15 – Selection of coordinates for Pelican South umbilicals

No.	Stereo 70 System		WGS84 TM30NE System	
	North (m)	East (m)	North (m)	East (m)
1	298546.514	947776.631	4877328.610	547088.044
2	298616.904	947858.514	4877393.697	547173.987
3	298600.027	948011.182	4877367.451	547325.075
4	299466.468	948684.774	4878189.250	548049.812

The configuration for the subsea umbilical will include:

- A pull-in head, used to connect the umbilical to the topside system and to pull the umbilical into position on the host facility;
- A topsides umbilical termination hang-off assembly used to hang-off and secure the umbilical to the host facility;
- Static umbilical segments;
- UTAs and associated foundation structures connected to the subsea ends of the main umbilicals, and to both ends of the infield umbilical;
- Bend restrictors at each umbilical-UTA interface to prevent umbilical over-bending during installation and retrieval;

- Cathodic Protection system covering umbilical and UTA with anodes placed on the UTA;
- Bellmouth at the end of each J-tube through which the 2 static umbilicals will be pulled onto the SWP;
- Centralizers inside J-tubes for installation and/or operation;
- One-off repair splice for Domino and Pelican South;
- Umbilical armoring included in areas where trenching is required;
- Umbilical to account for and mitigate concerns that are present as a result of operation of the DEH system that is part of the Domino Flowline (AC Corrosion, induced voltage, communication interference, grounding etc.).

3.6.2.3.5 Manifolds, suction piles and mudmats

Each drill center will contain wells placed in a cluster arrangement around a production manifold. The production wells will be connected to 2 production manifolds at DODC1 and DODC2, respectively one production manifold at PSDC1.

Foundation suction piles and/or mudmats will be included for subsea equipment, as follows:

- 2 Suction Piles with associated platforms for the two Domino production manifolds;
- 1 Suction Pile with associated platform for the Domino production flowline ITA;
- 1 Suction Pile with associated platform for the Domino production FLET at DODC2;
- 1 Mudmat for the Domino production flowline FLET at the SWP;
- 1 Mudmat for the Production pipeline PLET at the SWP.

3.6.2.3.6 Other subsea equipment

The following FLETs, PLETs, and ITAs will be installed:

- One 457.2 mm (18-inch) Domino production flowline FLET at the SWP;
- One 355.6 mm (14-inch) Domino production flowline FLET at DODC2;
- One 457.2 mm (18-inch) / 355.6 mm (14-inch) Domino production flowline ITA (with 14 to 18-inch concentric expander and DEH piggyback cable integration) at DODC1;
- One 762 mm (30-inch) production pipeline PLET at the SWP.

A total of 2 risers (one for production pipeline and one for Domino production flowline) and 7 J-tube will be provided within the project.

The ancillary equipment includes:

- One 355.6 mm (14-inch) Domino production flowline subsea pig launcher that also includes 457.2 mm (18-inch) major barrel and is used to maintain the multi-diameter Domino production flowline;
- One 273.1 mm (10.75-inch) ID Pelican EH flexible production flowline subsea pig launcher / receiver (for pre-commissioning only).

3.6.2.4 Shallow Water Platform

3.6.2.4.1 SWP Overview

The Domino and Pelican South production will be tied back to a standalone, normally unmanned production SWP comprising of a jacket structure with two-level topsides facilities. The SWP will be located on the continental shelf in water ranging from 120-130 m deep and will occupy an underwater area of **3,547 m²**. Stereo 70 and WGS coordinates of SWP location are provided below in Table 16.

Table 16 - SWP Coordinates

Location	Stereo 70 Coordinate System		WGS84 TM30NE Coordinate System	
	North (m)	East (m)	North (m)	East (m)
SWP	298534.294	947751.252	4877318.000	547062.000

The SWP will have a minimum 20-year design life. SWP main design parameters are listed in Table 17.

Table 17 - SWP Design Parameters

Parameter	Characteristics
Estimated Produced Water Rate	Up to 60 m ³ /hr
Electrical Power Generation	3 x 50%
Gas dehydration unit/cMIST	1 x 100% or 3 x 33%
TEG Regeneration	1 x 100%
Persons Onboard	Unstaffed

Notes:

1. There is no provision for condensate handling. Hydrocarbon liquid rate anticipated to be 0 m³/h.
2. Short term produced water rates of 830 m³/h to be managed during pigging operations.
Estimated Annual Mean Gas Production Daily Rate: 19,000,000 m³/day (average of daily production estimated for entire project, including all wells and both Domino and Pelican South gas fields).

The topside facilities will process the full well stream fluids producing a dry gas sales stream. The dehydrated gas will be exported via a production pipeline to an onshore NGMS for custody transfer to the Romanian NTS.

Treatment of produced water will be handled on the facility, accounting for expected increases in liquid handling throughout the facility's life. Due to the expected 99.4% concentration of dry gas / methane with no liquid hydrocarbons present in the Domino and Pelican South flow streams, the process equipment on the facility is not designed to accommodate liquid hydrocarbons.

The description of process flow at the SWP is presented in Section 3.6.3.1.

The production processes on the SWP will be monitored and controlled remotely via the FOC from the onshore CCR located adjacent to the NGMS site.

The SWP will also provide electric power, utilities, and controls to the associated subsea developments.

The list of major facilities and systems at the SWP includes:

- Structural systems, including:
 - Steel Piled Jacket provided with foundation appurtenances, boat landing, sea deck, jacket leg storage tanks, and external corrosion protection and
 - Topsides provided with helideck, access and egress systems.
- Process Facilities, including:

- Inlet Manifold;
- Inlet separator;
- Gas Dehydration Unit/cMIST;
- Glycol Regeneration System;
- Pigging Facilities;
- Well Clean-Up Facilities.
- Utilities and Process Support Facilities, including:
 - Vent Systems;
 - Fuel Gas Systems;
 - Instrument Gas Systems;
 - Nitrogen System;
 - Hydraulic Power Unit;
 - Platform Crane;
 - Open Drain System;
 - Utility Liquid Storage;
 - Methanol System;
 - Chemical Injection System.
- Electrical Systems, including:
 - Main Power Generation System;
 - Essential Power Generation System;
 - Power Distribution System;
 - Local Equipment Room;
 - Uninterruptible Power and DC Power Systems;
 - Lighting;
 - Earthing;
 - DEH and Electrical Trace Heating Power Systems.
- Control Systems, including Instrumentation and Controls;
- Facility Communication and Security Systems;

- Safety Systems, including: Emergency Shutdown and Isolation System, SIS, Relief Blowdown and Flare Systems, Fire and Gas Detection System, Active and Passive Fire Protection Systems, HVAC Systems, Internal and External Communication Systems, Escape, Evacuation and Rescue Systems.

3.6.2.4.2 SWP Infrastructure

The SWP structural system consists of an integrated deck topside and a four-legged, steel piled jacket substructure. Figure 4 below shows a 3D Conceptual Model of the SWP.

Figure 4 – Shallow Water Platform 3D Model

Topsides

The current conceptual layout of topsides calls for 2 deck levels. The Upper Deck level consists primarily of process equipment and power generation equipment. The Lower Deck level consists primarily of utilities and subsea control equipment.

The steel piled jacket is four-legged steel braced structure with skirt piles. The jacket will support the integrated topsides, appurtenances, and piping. The jacket configuration will facilitate a floatover installation of the topsides.

Topsides will accommodate the required process, utilities, subsea controls, and other functional requirements. The topsides will also house a pedestal crane and a vent boom structure. A truss system along the main gridlines will be used to support each level and provide resistance to lateral loads. A series of beam grillage will form the flooring system that will support the deck grating and/or plating.

A 500 m safety zone shall be established around the platform that unauthorized vessels are prohibited from entering. Navigation aids specific to offshore platforms will be installed at the SWP.

The main processes, utilities, controls, etc. accommodated within the topsides are summarized below:

- A minimum 20 year service life;
- Weight estimate: 4,557 metric tons (neat, ex-deck support frame);
- Honeywell Process Control System / SIS; process will be controlled remotely from onshore control room via FOC & VSAT back-up;
- 2-phase gas-liquid separation - 60 m³/h liquid capacity;
- Gas Dehydration Unit/cMIST;
- TEG regeneration large, but standard technology;
- Small process flare for routine gas emissions;
- Cold vent for emergency upsets;
- Produced fluids filtered and discharged to Black Sea;
- 9 MW gas-fired power generation with 3 x 50% Solar Centaur 50 turbines;
- Gas-fired essential services generator;
- Local equipment room for electrical and control systems, including subsea control system;
- Topsides module for DEH power supply and control;
- Shared hydraulic power unit for subsea and topsides;
- Platform crane to support maintenance campaigns;
- Routine access via boat landing; non-routine access via helideck.

Jacket

The main design characteristics of the jacket are summarized below:

- 120 m fixed jacket support structure;
- Weight estimate: 6,847 metric tons (neat, including buoyancy, ex. piles)
- 41.5 m gap to accommodate topsides float-over;

- Secured to sea floor with eight x 84-inch (2133.6 mm) diameter, 110-meter-long piles.

The jacket will be founded to the soil using skirt piles, instead of main piles driven through the legs of the jacket. The use of skirt piles will allow for storage of fluids inside the legs of the jacket. The design calls for 2 skirt piles per leg, for a total of eight piles. Based on current information, the target penetration for each pile is 90 m below mudline.

The SWP will be provided with process facilities, such as: inlet manifold, inlet separator, gas dehydration system, TEG regeneration system, pigging facilities (pig receiver for Domino flowline, pig launcher for the GPP), and produced water treatment facilities. The description of process flow and related facilities is presented below in Section 3.6.3.1.

The platform jacket will support 5 caissons, respectively 1 caisson will be for the produced water discharge and the other 4 caissons (1 caisson for open drain fluids storage, 1 caisson for lean TEG storage, 2 caissons for methanol storage) will connect to leg storage tanks for various utility liquids.

The jacket will utilize the top compartment of all four legs as storage tanks of 200 m³ each for process fluids (1 tank for lean glycol storage, 2 tanks for methanol storage and 1 tank for collected open drain fluids) that will be used during platform operations. Pump caissons will run down vertically from the Sea Deck and will be connected to the leg storage tanks via interconnecting piping. A closure diaphragm will separate the leg tank storage compartment from the bottom compartment of the jacket leg, which will be flooded with seawater during upending of the jacket. The inside of the jacket legs will be coated and provided with cathodic protection via sacrificial anodes to prevent corrosion from the liquids being stored inside the leg tanks.

Precipitation that falls onto decked areas around the SWP equipment will be captured and diverted into an open drain system. Similarly, any wash down water that falls into decked areas will likewise be captured and diverted into the open drain system. All open drain water will be diverted to the storage tank of 200 m³ located in one of the steel legs of the SWP.

2 Risers and 7 J-tubes will be installed at the SWP in order to receive production flows and house umbilicals and power cables for subsea equipment. The risers/J-tubes will route up through the jacket and terminate on a platform near the top of the jacket. Cables and pipes from the topsides will then connect down to the platform that house these terminations and junction boxes. To minimize the impact of a riser event, all risers have been located on the east side of the facility, closest to the vent and furthest from the power generation.

The jacket will have a Sea Deck level near the top of the jacket. The Sea Deck will support the anchor flanges for the risers and J-tubes. The Sea Deck is designed to allow for umbilicals and cables to be pulled in and terminated before the topsides has arrived. This installation would require that the Sea Deck be designed to support a winch system which would be required for pull-in of the cables and umbilicals through the J-tubes.

The platform was designed to accommodate future facilities. In this sense, 2 J-tubes slots will be pre-installed on the jacket for future facilities installation.

The main electrical equipment provided at the SWP will include:

- Main power generation system consisting of three Solar Centaur 50 gas turbine generators operating in a N+1 configuration, thus allowing one main generator to be spare (e.g., cold standby) at all times. The rated output of two Centaur 50 generators at -4.4°C and 27°C are approximately 8.9 megawatt (MW) and 7.3 MW, respectively. The generators will be sized to supply all electrical loads including DEH under all operating conditions. DEH is the dominant electrical load representing over 60% of the entire load;
- One natural gas driven essential service generator of 400 VAC (Volts of Alternating Current) will be provided for black start, and for SWP and subsea essential loads (e.g., life safety, equipment protection, critical heat tracing, critical operating equipment and to safety and control systems). For black start

purposes the essential generator will be fed with fuel gas from the sales gas pipeline via an electric operated bypass valve. The essential generator is sized to support starting of the main power gas turbine generators and can be started from the onshore CCR;

- A Local Equipment Room will be utilized to provide efficient distribution of electric power on the SWP in order to minimize/optimize cable size and length and provide protection to equipment from the outdoor ambient environment. There will be one standalone 2-level pressurized LER where a transformer room separated by a switchgear will consume the first level and a battery & ICSS room along with an outside redundant HVAC system will encompass the second level. The Local Equipment Room will house all necessary electrical, instrumentation, control, and fire protection equipment to serve the process and infrastructure requirements;
- Non-redundant 230V AC UPS systems with an autonomy time of 90 minutes will provide power to loads that cannot tolerate power interruption or that require reliable and regulated AC power;
- A DEH container will be installed to supply and control single phase power to the DEH Domino flowline while allowing remote control and delivery of the required current for resistance heating to each flowline. Fiber optic monitoring will be included in the Domino piggyback cable for distributed temperature indication and protection of the system;
- Pelican electrically heated flexible system that will be housed in the Local Equipment Room.

Two separate hydraulic power units will be provided on the SWP, respectively: one utilizing an aqueous motive fluid and a second utilizing an environmentally safe, low volatility mineral oil. The aqueous hydraulic power unit provides pressurized hydraulic fluid for operation of the subsea hydraulic power system as well as actuation of the large bore shutdown valves topside. The mineral oil hydraulic power unit provides drive fluid to the hydraulically driven caisson pumps serving the jacket leg storage.

Emergency shutdown and isolation equipment (e.g., shutdown valves) and measures will be provided at the SWP for protecting hydrocarbon processing facilities.

An Emergency Relief Vent is sized to relieve the upside potential gas rate in the event of blocked flow. It is also capable of lesser vent rates such as flowline depressurization, gas blow-by, and other credible scenarios.

Continuous hydrocarbon vents on individual systems or equipment, including the produced water flash drum flash gas, the gas streams from the TEG regeneration package, the blanketing gas for the jacket legs, and exhaust of the pneumatic actuators, are disposed of to a low-pressure flare. This flare is equipped with spark type ignitors as the primary method of ignition with a self-aspirating flame front generator as the secondary means of ignition.

Fire and Gas Detection Systems will be installed to detect and notify personnel of fires, hazardous accumulations of flammable gas, oxygen deficient and/or hazardous atmospheres as applicable, and to interface with other systems to minimize the extent and severity of these events. Flame, gas, and smoke detectors will be located across the platform as appropriate.

Active fire protection systems will be provided in order to protect personnel, provide the means for extinguishing and preventing escalation of fires where possible, and reduce fire damage and thus enable the facility to return to a safe status as soon as possible after a fire. The active fire protection system at the SWP will include:

- The helideck equipped with a self-contained foam-based Deck Integrated Fire Fighting System;
- Self-contained Fine Water Mist System in Gas Turbine and Essential Generator Enclosures;
- Fire Extinguishing System for LER and DEH Buildings;

- Fire extinguishers.

The helideck will be provided for emergency medical evacuation or for urgent operational need. The helideck will be sized to accommodate an Agusta/Westland AW 139 helicopter. No refueling facilities will be provided. The helideck will be located on the west side of the facility, away from the risers, flare, and cold vent. It has been located to minimize the impact of the exhaust from the Gas Turbine Generators on to the availability of the helideck.

Passive Fire Protection will be provided as required at the Installation to prevent the spread of fire, and also protect personnel, equipment, and the structural integrity of the platform. The primary functions of fireproofing on offshore facilities are to prevent the collapse of the portions of the structure needed for safe platform evacuation, prevent escalation of fire from one area to an adjacent area, and protect systems and equipment that are of essential importance to safety.

HVAC system will be installed to provide an acceptable environment (temperature, humidity, and filtration standards) within all enclosed areas (e.g., LER), and to maintain segregation of hazardous and nonhazardous areas by way of pressure differentials and/or dilution ventilation.

Internal and external communications systems (e.g., alarms, very high frequency radios, etc.) will be installed at the SWP in order to provide general audible communication during normal and emergency operations, provide audible and visual indication of changes to the platform status, keep personnel informed of potentially hazardous work activities, and provide means (hand portable radio) for person-to-person communications.

Escape, evacuation, and rescue systems will be provided at the SWP, and will include primary and secondary escape routes, evacuation routes, and a temporary shelter.

The jacket is designed with a single boat landing on the west side of the platform, which is on the opposite side of the risers, vent, and flare. The boat landing is designed to accommodate marine personnel transfer via swing rope or from a heave-compensated gangway mounted on a supply vessel.

The crew boat provides primary means of access to the platform, via a heave compensating "Walk to Work" gangway. The boat also provides accommodation and welfare facilities for personnel while visiting the platform. The crew boat accommodation will be designated as primary muster point for the platform and evacuation to the crew boat through the heave compensated gangway is considered the primary means of evacuation from the platform during an emergency.

No permanent accommodation will be included on the platform, as no personnel will be continuously located on the facility. A temporary shelter will be provided for protection from the elements should the normal means of egress be temporarily unavailable. The temporary shelter is designed to accommodate 12 personnel for overnight stay and will be provided with 12 beds to enable each person to take rest and sleep. The shelter will be large enough to accommodate typical O&M team of 20 personnel based on a minimum size of 0.6 to 0.7 m² per person.

The shelter is designed with blast and fire resistance to maintain its integrity and provide protection to personnel, and will be used in case of:

- Major abrupt boat failure leading to inability to approach and connect to SWP. The personnel may stay stranded on SWP for 18-20 hours;
- O&M team of 6-8 members (including pilots) will travel to platform by helicopter in case of operational emergencies. If the helicopter does not start or suffers an equipment failure on arrival at SWP then the pilots and operations/maintenance personnel will move to SWP temporary shelter and await the arrival of the boat and additional crew.

An electrically driven platform crane fixed length box boom with 30 m boom, will be provided to facilitate transfer of supplies and equipment to and from the platform as well as to assist in major maintenance activities. The crane may also be utilized as a secondary means of personnel transfer when boat landing is not practical, e.g., medical transfer. The crane will be located on the Upper Deck of the platform and will require a boom rest. A laydown area will be provided on the Lower Deck within the crane's reach.

3.6.3 Description of the production processes of the project

3.6.3.1 Offshore production processes

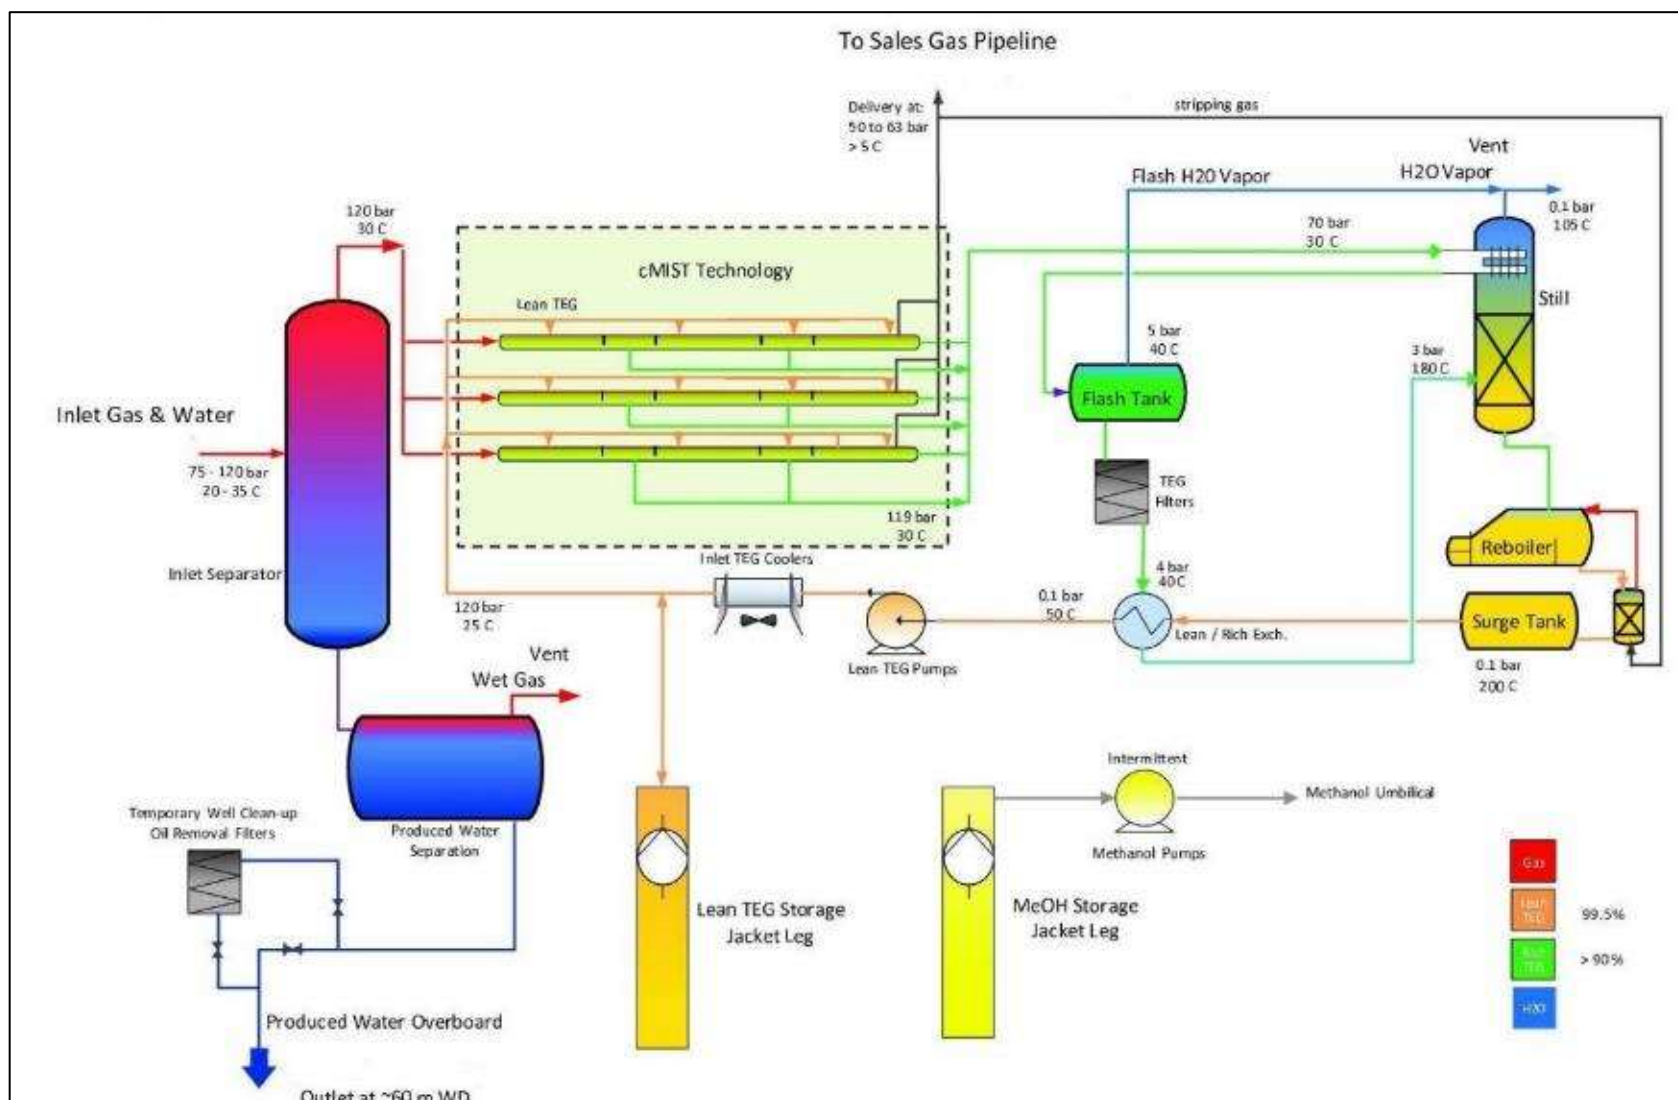

The proposed objective of the Neptun Deep project is to develop the natural gas reserves from the Domino (2 drill centers) and Pelican South (1 drill center) gas fields. The produced gas and water arrive on the SWP facilities via separate flowlines from the Pelican South and Domino fields drill centers.

The SWP will be provided with installations and facilities to support the gas production, separation, and dehydration process, such as:

- Production flowlines and inlet manifold;
- Inlet separator;
- Gas Dehydration Unit/cMIST;
- Glycol Regeneration System;
- Pigging facilities;
- Produced water treatment system.

Due to the expected 99.4% concentration of dry gas / methane with no liquid hydrocarbons present in the Domino and Pelican South flow streams, the process equipment on the facility is not designed to accommodate liquid hydrocarbons.

A simplified process flow diagram of the process flow at the SWP is shown in Figure 5. A summary description of process flow and equipment is presented in the paragraphs below.

Production manifold

The flow line system incorporates an open DEH system being used for continuous hydrate prevention for the Domino field and an EH flexible flowline for Pelican South. Power generated at the platform is used to energize both the DEH and flexible flowline heating systems. The Domino flowline will have a fixed riser and the Pelican flexible will run up the jacket inside a J-tube.

At the platform, the two risers pass through their respective boarding valves followed by barred tees. The flow path through the mainline of the barred tee provides piggable access to either a pig receiver for Domino or a connection for a temporary pig trap for Pelican.

A permanent pig receiver is provided for the Domino production flowline sized to accommodate the largest maintenance and ILI pig. Space shall be allocated to allow unloading of the pigs. Purging of the receiver shall be performed from a nitrogen system that also snuffing capability to the emergency relief vent and is sized to provide a minimum of three snuffing attempts in addition to maintenance purging. Pressurized nitrogen bottles are provided along with a distribution header to facilitate purging of equipment such as pig traps.

Through the side of each barred tee, the flow is routed to the Production manifold. Isolations as well as riser chokes are supplied on both lines of the manifold prior to being comingled. The return of the Domino pig receiver is also comingled with the production flow in the production manifold prior to being routed to the primary separator.

Heat tracing is provided from the splash zone of the risers through the inlet manifold and to the inlet separator to prevent hydrates in the winter. While ambient temperatures can reach -17°C, the heat tracing will maintain a process temperature above the hydrate formation temperature.

Gas Separation

Production from the Domino and Pelican fields will be manifolded in such a way that each field can be routed to the Inlet separator. The full well stream is then separated into produced gas and produced water via the inlet separator.

The Inlet separator is a traditional vertical gravity-based separator designed to provide vapor liquid separation as well as slug or surge capacity of 23 m³. The inlet separator size will be of 2.3 m diameter and 10.8 m length.

The operating pressure of the inlet separator will be 125 barg (gauge pressure) in early life but will reduce to as low as 75 barg in late life. Operating pressure will continue to reduce as rates decline and the export pipeline pressure drop decreases. The average arrival temperature is 25°C; however, the temperature could be as high as 30°C in the summer.

Defoamer is injected at the inlet of Primary Separator to prevent foaming within the separator. The separated wet gas from Primary Separator flows to the gas dehydration unit.

The liquid leaving the bottom of the separator is composed of produced water, injected chemicals, and solids (formation fines). Note that there is no hydrocarbon liquids content present in the liquid stream.

The inlet separator and piping are designed to ensure that the fines remain entrained in the water phase and passed to the produced water separator in order to prevent any sand accumulation within the separator system including piping.

While metering for well allocation occurs subsea at the tree and metering for fiscal custody transfer occurs onshore at the metering station, surveillance level metering is also provided on both the gas and water streams from the separator.

The separator liquid level will be controlled by a level controller and control valves provided in the liquid outlet. Pressure is controlled by a downstream pressure control located at the pipeline inlet. The temperature at gas outlet will be monitored to ensure it is operating above hydrate formation temperature (15°C) and below dehydration unit maximum temperature limit of 35°C and starts experiencing degraded performance at 30°C. Pelican South (high temperature fluids) and Domino flow rates may be adjusted as required to keep the temperature within the operating limits. A spool piece is provided at the separator gas outlet for installation of a Gas Cooler in case of such a requirement due to higher-than-expected arrival temperatures in the future.

Relief Valves and Blowdown valves are provided on the separator for over pressure protection and is relief and vents are routed to High Pressure (HP) Emergency Vent Header.

The gas from Inlet separator flows to the dehydration unit. The liquid leaving the bottom of the Inlet Separator is passed to the produced water degassing drum (horizontal two-phase gas-liquid separator) where the residual gas which remains in the mixture of produced water, fines, and chemicals is removed via a low pressure (0.5 barg) flash separation. The flashed gas is sent to an atmospheric vent and the remaining produced water effluent will be managed in accordance with relevant regulations in force.

Gas Dehydration/Drying

The produced gas from the Inlet Separator is dehydrated/dried in the gas dehydration/drying unit using lean TEG. Rich Glycol from the gas dehydration unit is regenerated in the TEG Regeneration system to produce lean TEG which is used in the gas dehydration unit. For makeup and initial fill, lean Glycol is stored in the TEG storage tank of 200 m³ storage volume installed in one of jacket legs.

The lean TEG absorbs water during the dehydration process and becomes rich TEG. The dehydrated gas leaving the gas dehydration unit system is routed to the onshore metering station via the subsea production pipeline to the onshore gas metering station and finally to the Romanian NTS.

The water rich TEG stream is regenerated in a conventional glycol regeneration system.

The lean TEG from the regeneration system is fed to the gas dehydration unit and the flow rate is controlled using a flow control valve. The TEG to each unit is divided into four streams that are fed to the individual stages. The TEG flow rate to the individual stages will be set by the operating team. The rich TEG from the gas dehydration unit and the polishing unit will be combined together and sent to the TEG regeneration unit.

The liquid level in the monoline separators will be controlled by a nucleonic level controller and control valve provided in the liquid outlet line. A control valve is provided downstream of the polishing unit on all dehydration units for balancing the pressure between the parallel units and for isolation of units. Pressure drop across each gas dehydration unit stage will be measured to detect plugging and liquid carry over issues. Pressure drop will also be measured across the mist eliminator in the monoline separator boots. The water content of the gas will be measured downstream of the polishing units using online moisture analyzers.

Alarms and trips are provided as required to facilitate safe operation of the system.

Triethylene Glycol (TEG) Regeneration

The combined rich TEG liquid outlet from gas dehydration system is routed to the TEG Regeneration system. The rich TEG is regenerated for reuse by flashing it to low pressure, heating and by fuel gas stripping. Regenerated lean TEG is routed back to the gas dehydration system. Make-up Lean TEG will be added to the system to maintain the optimal operating parameters of the system.

The TEG Regeneration section is composed of (listed according to flow sequence):

- TEG Reflux Condenser: mounted at the top of the TEG Still Column (inside);
- Rich TEG Flash Tank (vertical 2-P Separator);

- Rich TEG Filters;
- Lean/Rich Glycol Cross Exchangers;
- TEG Still Column (vertical) mounted on top of TEG reboiler;
- TEG Reboiler (horizontal) with TEG Reboiler Electric Heater located inside;
- TEG Reboiler Electric Heater (4 x 200 kW) consisting of 4 bundles, each bundle with 33% excess elements (not connected to power supply) required as spare;
- Gas Stripping Stahl Column (vertical);
- Lean TEG Surge Vessel (horizontal drum);
- Lean TEG Pumps;
- Lean TEG Air Cooler: combined unit with reboiler vent air cooler using shared fans; during normal operation single fan will operate; both fans will operate during peak demand;
- Reboiler Vent Air Cooler: combined unit with TEG air cooler using shared fans;
- Reboiler Vent Knock Out Drum: vertical 2-P separator with outlet connected to low pressure flare.

TEG Regeneration Unit is a package unit. All the equipment above and associated piping are included in the scope of package unit except Reboiler Vent Knock Out Drum which is located outside the skid.

In the rich TEG inlet line to Regeneration unit, a hand control valve is used to reduce the pressure down to rich TEG Flash Drum operating pressure of 6 barg (from 125 to 75 barg in gas dehydration unit). The rich TEG is pre-heated in the TEG Reflux Condenser (located at the top of TEG Still Column) by heat exchange with the vapor from the TEG Reboiler. From the condenser, the rich glycol flows to the rich TEG Flash Drum, where the glycol is flashed to remove any dissolved gases to Low Pressure (LP) Flare Header. Rich TEG Flash Drum is to liberate the residual gas and formation water that were dissolved in the TEG during gas drying process by depressurization and heating. Note that there is no hydrocarbon liquid present in the production fluids and hence no liquid hydrocarbon is expected in the TEG Regen system. Hence no hydrocarbon separation system is provided in the Flash Drum and also no charcoal filters required for hydrocarbon adsorption. However, the TEG system is a closed loop where decomposition and corrosion residues could accumulate. The rich TEG from the Flash Drum flows through Glycol Filters to remove any solids/impurities larger than 5 microns size. Two filters are provided, one for operation and the other in standby.

After the Glycol Filters, the rich glycol is heated further in the Lean/Wet Glycol exchanger by cross exchange with the hot lean glycol coming from the TEG Reboiler. After the Lean/Wet Glycol exchanger, the rich glycol flows to the TEG Still Column where the water is removed from the glycol through distillation. The Still Column operates at approximately 0.5 barg. The temperature is 204°C at the bottom of the still and vapor leaving the TEG Reflux Condenser is controlled to ~100°C by the flow of cold Rich TEG through the cooling coils and its bypass. The non-refluxed vapor not condensed by the overhead condenser is sent to Vent Cooler. This cross exchange cools the column overhead vapors providing reflux in the Still Column to minimize glycol losses. Liquids from the Still Column flow to the glycol Reboiler located at the bottom of the Still Column. The TEG Reboiler uses Electric Heaters to heat and vaporize the water from the glycol. The temperature in the TEG Reboiler is kept at 204 °C.

From the TEG Reboiler, the lean glycol flows via an overflow pipe to the Gas Stripping Stahl Column. In the column TEG flows counter current to a small amount of stripping gas (fuel gas) for final water removal. The required concentration of Lean TEG to dehydrate the gas is reached in this column. This stripping gas is taken from the LP Fuel Gas System and is preheated by flowing through a coil inserted in the TEG Reboiler. Excess stripping gas can cause high TEG losses in the TEG Still Column and hence the flow rate shall be controlled.

The bottoms of the Stahl column flow through the Surge Drum while the overhead returns to the glycol Reboiler. The Surge Drum feeds the Lean/Rich Exchanger where the lean glycol is cooled by cross exchange with the rich glycol. After the Lean/ Rich Exchanger, the lean glycol flows to the TEG Surge Vessel. This liquid flows by gravity. The TEG Surge Vessel provides a buffer volume for the circulating glycol and is used to maintain a suitable inventory of TEG in the system to provide reasonable operating time before TEG must be added to the system. It is also designed to hold sufficient Lean TEG volume and contain TEG volume displacement due to thermal expansion when the system is heated.

The Lean TEG is pumped from the TEG Surge Vessel by the Lean TEG Pumps through Lean TEG Air Cooler into the gas dehydration system. There are two Lean TEG Pumps with one operating and the other stand by. When the duty pump trips the standby pump shall start automatically. The Lean TEG Air Cooler further reduces the temperature of Lean TEG for the gas dehydration unit injection. Note that Lean TEG supply temperature would be adjusted based on gas dehydration unit operating temperature and ambient temperature conditions.

The overhead non-refluxed vapor from TEG Reflux Condenser is sent to Reboiler Vent Air Cooler and then to Reboiler Vent Knockout Drum. The condensed water is separated and disposed via Produced Water Disposal Caisson. The separated gas from the top of the knockout drum is vented to LP Flare.

TEG Still Column Top/ Reflux Condenser overhead gas temperature is controlled by adjusting the bypass control valve around the condenser exchanger. Flash Drum liquid level will be controlled by a level controller and control valve provided in the liquid outlet. Flash Drum Pressure is controlled by pressure control valve located at vapor outlet. Reboiler Rich TEG temperature is controlled by heater element control. Fuel gas flow (stripping gas) is controlled by a Flow Controller in the fuel gas supply line. A minimum flow control is provided for Lean TEG Recirculation pump protection.

Lean TEG supply temperature controlled by the Lean TEG bypass control provided across Lean TEG Air Cooler. Surge Drum level is controlled by the on-off mode operation of Lean TEG Storage pump.

Relief Valves and Blowdown valves are provided for equipment/piping over pressure protection.

Gas export to shore

Downstream of the gas dehydration units, the treated gas flow is manifolded together for export to shore. A backpressure control valve is provided on the combined stream to allow for constant platform pressure independent of pipeline packing, depletion, or gas sales rate at the onshore NGMS. A dew point analyzer is provided to ensure gas outlet to pipeline meets dew point specification. A slip stream is then taken to supply the fuel gas system prior to the remaining gas departing the platform through a rigid riser and traveling to shore in the production pipeline.

For maintenance of the production pipeline, a single pig launcher is provided and sized to accommodate the largest maintenance pig appropriate to that pipeline. Space shall be allocated to allow loading of the pigs as well as the addition of a trap barrel extension for receiving of an ILI pig. Purging of the launcher shall be performed from the nitrogen system. The motive fluid for kicking and driving the pig will be sales gas from the gas dehydration unit system.

3.6.3.2 Onshore production processes

After processing the natural gas at the SWP in order to comply with contractual gas transmission specifications, the gas production pipeline will transport it to the onshore NGMS for measurements prior to transfer to the downstream Transgaz Pipeline supplying the Romanian NTS.

NGMS will include a combination flow and pressure control system to control gas deliveries into the Romanian NTS. Control of gas volumes transferred into the Romanian NTS will be achieved via the two control valves installed at the NGMS downstream of the metering equipment.

There will be no hydrocarbon processing at the NGMS. All separation and processing of the natural gas will take place at the offshore SWP prior to flowing through the production pipeline to the NGMS. While no liquids are anticipated to accompany the processed gas arriving at the NGMS during normal operations, an inlet filter / separator equipped with level switches, alarms and manual dump valves will be installed at the NGMS to protect the NGMS meters from potential small amounts of water being sent to the NGMS by process upsets at the SWP.

A pig receiver assembly will be installed at the inlet of the NGMS to facilitate in-line inspection and maintenance pigging of the production pipeline. The pressure rating (design pressure and maximum operating pressure) of the NGMS piping and associated gas handling equipment will match that for the production pipeline pressure rating. Design of the pig receiver assembly will allow for use in the reverse direction as may be required for pre-commissioning de-watering activities.

The NGMS piping design includes provisions to enable "temporary" receipt of gas from the NTS to support commissioning of the offshore production pipeline and SWP during early project start-up. A "temporary" dedicated custody transfer quality meter, complete with moisture analyzer and gas chromatograph equipment, will be installed on the reverse pressurization line for fiscal measurement and accounting of gas volumes obtained from the NTS.

The CCR will serve as the primary operations control center for all Neptun Deep project facilities (subsea, shallow water platform, production pipeline, and NGMS). The CCR will house the facilities for monitoring and remotely operating project facilities.

The process flow diagrams are shown in Appendix D.

3.6.4 Raw materials, energy and used fuels, and their supply

The onsite construction and installation works proposed by the project will be executed using natural resources (fresh water, sea water, wood, etc.), mineral aggregates (e.g., sand, gravel, limestone, bentonite, etc.), building materials (e.g., concrete, geotextiles, and other project specific building materials), energy, fuels, chemicals and other project specific materials and products.

The freshwater will be ensured by water trucks supplied from water sources located within project area based on specific agreements signed with the regional water supply operator (RAJA Constanta). For offshore construction/installation activities, the fresh water will be provided by construction/installation vessels supplied from authorized water sources in the Constanta Port.

The sea water required for construction/installation activities (e.g., pipeline/flowline hydrostatic testing, tunnel backfilling, drilling fluid) will be taken from the Black Sea.

The mineral aggregates (e.g., sand, crushed stone, bentonite, etc.) will be brought from authorized sites with sufficient production capacities, located within Constanta County (less than 100 km) for a better efficiency and for reducing the impact on the environment due to transport equipment emissions. The materials will be loaded from the extraction site and transported by authorized vehicles to the onshore construction sites or to the project designed shore base location and then onboard of the offshore construction/installation vessels.

The specific building materials required for project construction/installation will be purchased based on contractual agreements executed with authorized specialized suppliers. All building materials will be fabricated in accordance with applicable standards and norms and will be accompanied by certificates of conformity. The building materials and equipment will be properly stored and managed in accordance with applicable legislation and standards.

The overall philosophy used in the selection of materials is based on minimizing full life-cycle costs (capital and operating costs), ensuring intended production design life, and maintaining schedule for fabrication, while working to minimize needed maintenance and acknowledging the generally longer response times to any loss

of containment and realizing that during operation the scheduled trips to the offshore SWP will likely occur every 3 months.

The chemicals used for onshore construction/installation will be procured from authorized suppliers and temporarily stored at the onshore construction sites. The chemicals used for offshore construction/installation (e.g., pipelines precommissioning chemicals) will be procured from authorized suppliers and temporarily stored at the designated onshore project quayside location. The chemicals will be further transported to the offshore sites by specialized installation vessels. The chemicals will be stored and managed in accordance with legal provisions and material safety data sheets requirements. Details on chemicals management during project lifecycle are presented in Section 6.1.9.

Power will be required during construction, installation, and commissioning of onshore, shore crossing and offshore facilities. The required power will be sourced by:

- An electrical power transformer that will source power to the facilities (including offices and lighting) and equipment at the onshore NGMS construction site. The power transformer will be connected to the local power supply network (located at approximately 1,400 m South to the onshore project site). ***The electrical power connection (power transformer and connection to the power network) is not part of the project scope described in this technical memorandum and will be subject to a separate permitting/regulatory procedure;***
- Power diesel generators will be temporarily installed at the microtunneling construction works site and pipeline stringing yard and will provide power to tunneling related equipment and facilities, pipe assembly related facilities, and administrative offices;
- Specific power generation and distribution systems installed onboard of offshore support vessels;
- A portable power generator will be provided at the SWP to support the first-time startup of the SWP.

Details on onshore and offshore power supply are presented in Sections 3.6.5.1.3 and 3.6.5.2.3.

The fuels for onshore construction/installation equipment and vehicles will be regularly supplied from local fuel stations and transported via fuel tanker trucks by local distributors. The fuels will be temporarily stored onsite in approved/certified tanks provided with the possibility of collecting potential leaks.

The fuels for offshore vessels and equipment will be supplied by Regional Quayside Distributor (Constanta area) and transported to the offshore project area via supply vessels. The fuels for offshore vessels and equipment will be stored onshore at the project quayside location and then onboard the offshore vessels.

3.6.5 Connection to utility networks in the area

3.6.5.1 Onshore Utilities

3.6.5.1.1 Water Supply

No connections to local water supply network are planned during construction and operation phases.

The NGMS design premise is a normally unstaffed facility. This eliminates the need for an onsite water system at the NGMS.

The CCR area will be provided with standalone freshwater tank. No water connections to local utilities are planned. The freshwater tank will be an elevated tank to gravity feed the building water facilities. The freshwater tank will be periodically supplied by water trucks based on specific agreements signed with certified contractors.

The freshwater tank consists of an above-ground metal tank of 12 m³ volume that is equipped with thermal insulation and electrical resistance against frost. A submersible pump (electronic hydrophore type) with Q (flow) = 50 l/min, H (height) = 30 m, P (power) = 1.1 KW will be incorporated to the water tank. The pressure and flow in the installation will be ensured by means of this electronic hydrophore. The capacity of the water tank was dimensioned considering a water requirement of 20 days.

The fresh water will be used for sanitary installations (toilets, washbasins, sinks). This water will not be used for human-digestive consumption or for the preparation of food or edible liquids.

The water supply system inside the CCR building will be made of polypropylene pipe for water supply with thermo fusion connection having diameters between DN 20 mm and DN 32 mm. The hot water supply will be made from an electric boiler with a volume of 50 liters equipped with electric resistance P = 2,000 W.

Cold and hot water pipes will be insulated with thermal insulation and anti-condensation sleeves. The external pipes up to the frost depth will be thermally insulated and will be protected by antifreeze electrical cables controlled by a thermostat for temperatures lower than 5°C.

The water needs during construction/installation phase include sanitary water for site offices and crews (e.g., showers, toilets) and fresh water for construction/installation works (e.g., tunneling process, pipeline installation and testing, etc.). The onshore construction works sites will be provided with temporary water supply and storage tanks supplied by water trucks based on specific agreements signed with certified contractors. Details on water supply facilities installed at the construction works sites are presented in Section 10.

Fresh water needs (domestic water, process water) required during project lifecycle will be ensured from the local water sources operated by the regional water supply provider (RAJA Constanta).

The drinking water during both construction and operation phases will be ensured from commercial sources (bottled water) based on specific agreements signed with certified contractors.

3.6.5.1.2 Wastewater Management

No connections to local wastewater sewage networks are planned during construction and operation phases.

There will be no wastewater systems at the NGMS. The NGMS is not a normally staffed facility so this eliminates the need for onsite sewer systems.

The CCR area will be provided with standalone domestic wastewater (septic) tank. No sewer connections to local utilities are planned. The domestic wastewater tank will be an underground septic tank for gravity drainage from CCR building facilities. The underground septic tank will be periodically emptied by vacuum trucks based on specific agreements signed with certified contractors.

A rainwater drainage tank will be installed adjacent to the south-east corner of CCR site on a total surface of 25 m². The tank will collect the rainwater that drains through concrete areas inside CCR fenced site.

Details on wastewater management facilities installed at the CCR fenced site are presented in Section 6.1.1.3.

The construction works sites will be provided with temporary wastewater management facilities that will be periodically emptied by trucks and transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors. No sewer connections to local utilities are planned.

The main wastewater streams generated during onshore construction phase include domestic wastewater (graywater, blackwater) from administrative areas and produced water generated from construction/installation works (e.g., shaft construction, microtunnelling process, pipeline hydrotesting, etc.). Details on wastewater management facilities installed at the construction works sites are presented in Section 10.

3.6.5.1.3 Power Supply

Power for operation of onshore project components (NGMS, CCR, etc.) will be sourced from the local power provider (ENEL) using the electrical power transformer that will be installed on the east side of the NGMS site. The power connection project will include an access road and perimeter fence. ***The electrical power connection project is not part of the project scope described in this presentation memorandum and will be subject to a separate permitting procedure.***

The electric power supplied from the local power grid will serve as the primary power source for the onshore facilities. Power and cable distribution will be buried to the extent possible and designed to minimize above ground obstructions.

A standby diesel generator, complete with automatic power transfer switch, will be installed at the CCR site and will provide backup power to both CCR and NGMS. The standby generator will be sized to support essential operational loads for both NGMS and CCR during power outages. A small diesel fuel tank sized to support 3 days of continuous operation at full load, will be installed/incorporated within the standby generator. If necessary, the small diesel tank will be supplied by fuel trucks based on specific agreements signed with certified contractors.

An Automatic Transfer Switch will be provided to ensure automatic transition to and back from generator power.

Power supply is required at the onshore construction sites (NGMS construction site and microtunneling construction site). The power supply for NGMS construction site will be ensured from the electrical power transformer (***not part of the project scope described in this presentation memorandum and will be subject to a separate permitting procedure***) that will be installed on the east side of the future NGMS site. Electrical panels installed at the NGMS construction site will serve the power required for construction site facilities (including lighting) and equipment.

The power required at the microtunneling construction site will be ensured by three diesel powered generators of 750 kW each that will be installed at the microtunneling construction site. The diesel generators will ensure the power for microtunnelling related facilities (including lighting) and equipment. One diesel generator will be installed at the pipeline stringing yard and will provide power for pipe assembly related facilities.

3.6.5.1.4 Gas Supply

No connection to local gas supply networks is planned during construction and operation phase.

NGMS and CCR related offices and welfare facilities will be provided with electrical heating. Similarly, the onshore construction sites related buildings will be provided with electrical heating.

3.6.5.1.5 Heating, Ventilation, and Air Conditioning

HVAC system will be installed at the onshore located LER and CCR buildings. HVAC system will consist of an air treatment control unit connected to an external Variable Refrigerant Volume evaporation unit with high efficiency and low energy consumption. The air conditioning system will be mounted on the building roof.

The distribution of the air conditioning in the rooms will be done through rectangular air channels made of galvanized sheet, thermally insulated with basalt mineral wool mattresses.

The selection of the routes of the distribution channels was done considering the location of the air treatment plant and the possibilities of laying and masking the pipes.

Discharge vents have been provided for the introduction of air into the rooms for ceiling mounting. The connection between the discharge mouth and the flexible aluminum connection with which it is connected to the air inlet pipe is made by means of a telescopic plenum.

The evacuation of the air from the rooms will be done through the air recirculation / exhaust vents with the grid for mounting in the false ceiling, these being provided with an exhaust flow control system.

3.6.5.1.6 Telecommunication and Security

Communication between the LER and CCR, and then between the CCR and SWP will be via the direct link FOC routed parallel to the production pipeline. The FOC will provide communication between the SWP and operators working from the onshore staffed CCR. Fiber optic has been selected upon the basis of bandwidth, and availability for remote process control application.

The CCR will have provisions to communicate with the NGMS and SWP. The offshore FOC will serve as the primary means for communication with the SWP. A VSAT satellite dish will also be installed at the CCR to provide backup for communications with SWP.

Telephone and internet service will be sourced from local providers. There will be a dedicated fiber optic Multi-Protocol Label Switching connection with minimum 30 Mbps bandwidth for primary wide area network (WAN) link to the Business local area network (LAN). There will also be a wireless (IBPC) connection with 30 Mbps bandwidth for Dual-Line phone service that will provide secondary WAN connection to Business LAN. Antennae for the wireless connection will be located on the CCR roof.

The CCR will be provided with specialized security systems, including monitored CCTV system and access card readers. Security badge access will be required for access to the control room restricted area of the CCR building. In addition, the NGMS site will be provided with security systems including CCTV system, intrusion detection, and card reader access gates. Security systems and cameras will be connected to the CCR for alarming and remote monitoring. Both CCR and NGMS sites will be provided with perimeter fencing.

Telecommunication at the construction works sites will be done with mobile phones and very high frequency radios.

3.6.5.2 Offshore Utilities

3.6.5.2.1 Water Supply

No connections to water supply networks are planned during drilling/construction/installation, operation, and decommissioning phases.

The SWP is normally an unstaffed platform with personnel arriving on site only in case of emergency and for scheduled maintenance. The maintenance crew will be housed on the transport boat thus no fresh domestic water system is needed on the SWP.

Utility Water is required when people are on board to perform maintenance operations and to supply fresh water to the safety showers. Water is provided by support vessel, which includes pressure regulation and over pressure capability. Water is fed to the SWP via hose. To avoid cross contamination, hose connections will be customized so boat connection only fits corresponding SWP hose connection.

The safety showers tanks will be replenished with fresh water coming from the Support Crew Boat via freshwater header permanently piped to the units.

The eye wash units will be replenished from potable water cans brought from shore.

The fresh water for domestic/sanitary and drinking need at the drilling rig will be ensured by transport from port or by desalinization of sea water through desalinization systems available on the drilling rig. Sea water or desalinized sea water will be used for firefighting. Desalinized sea water will be used for equipment cooling.

Sea water pumped out of the Black Sea will be desalinized and utilized for preparation of drilling fluids required for production wells drilling.

For offshore construction/installation activities, the fresh water will be provided by construction/installation vessels supplied from authorized water sources located in Constanta Port.

Project hydrotesting of the production pipeline from NGMS pig receiver to SWP, and Domino and Pelican South flowlines will use sea water. Fresh water will be used for shore crossing microtunnel hydrotesting.

The drinking water during project lifecycle will be ensured from commercial sources (bottled water) brought from shore based on specific agreements signed with certified contractors.

3.6.5.2.2 Wastewater Management

No connections to wastewater sewage networks are planned during project lifecycle.

The wastewater streams generated during drilling/construction/installation/commissioning will include hydrostatic test water, well drilling and start up water discharges, wastewater (gray water, black water) and rainwater generated by drilling platform/support vessels.

The main wastewater streams generated during operation phase will include produced water and well restart fluids, subsea valve actuator fluids, SWP platform drains discharges, wastewater (gray water, black water) and rainwater generated by operations and maintenance vessels.

Decommissioning will require just pigging the flowline twice with sea water without additional chemicals.

All above mentioned wastewater streams will be managed in accordance with the appropriate regulations on wastewater management and will be transported via barges to shore-based wastewater treatment facilities (e.g., well start up water discharges) or discharged into the Black Sea marine environment (e.g., hydrostatic test water, water based drilling fluids, produced water, rainwater and other wastewaters that meet specification for discharge to sea), upon approval by the competent authorities.

The wastewater (gray water, blackwater) and rainwater generated by drilling rig and support vessels during project life (drilling, construction/installation, commissioning, production, decommissioning) will be managed following the appropriate maritime regulations regarding disposal of wastewater.

The water-based drilling fluid will flow on sea floor during the first two sections of the wells when drilling as is done riserless. Once the riserless sections are drilled and the riser installed, the drilling switches to a closed system and therefore to the NAF (Non-Aqueous Fluid) drilling fluid. This fluid returns to the drilling platform where is separated from the cuttings and stored temporarily on the drilling rig prior to being shipped onshore for treatment/disposal at an authorized waste facility.

Details on offshore wastewater sources and wastewater collection, treatment, and discharge systems are presented in Section 6.1.1.

3.6.5.2.3 Power Supply

No connections to power networks are planned during project lifecycle.

The vessels used during different project phases (construction/installation, precommissioning, commissioning, maintenance & operations, and decommissioning) will be provided with specific power generation and distribution systems to ensure power supply onboard of vessels.

The drilling rig will be powered by a minimum 32.065 kW main engine and will be equipped with an emergency generator capable of simultaneously supplying the services necessary for the safety of personnel in an emergency for at least 18 hours.

The required power for operation of offshore infrastructure (SWP, subsea systems, lighting systems, etc.) will be produced on site using natural gas from the production pipeline as a fuel source.

The main power will be generated offshore by three Solar Centaur 50 gas turbine generators operating in a N+1 configuration, thus allowing one main generator to be spare (e.g., cold standby) at all times. The rated output of two Centaur 50 generators at -4.4°C and 27°C are approximately 8.9 MW and 7.3 MW, respectively. The generators will be sized to supply all electrical loads including DEH under all operating conditions. DEH is the dominant electrical load representing over 60% of the entire plant load.

The main power will be generated at 6 Kilovolt (kV), 50 Hertz (Hz). Loss of one generator will require load shedding of DEH. It is expected that site conditions will allow 2 turbines to satisfy normal DEH operating load while maintaining N+1 configuration. However, the spare turbine generator will be required to meet DEH cold restart conditions expected approximately once per year.

If all main power gas turbine generators are down, all subsea wells will be shut down and topside equipment will be blocked in. Electrical power is not required to safely isolate the subsea or topside equipment. All valves required to safely isolate the facility are "fail safe" meaning that on loss of power they move to the safe position of closed or open via a mechanical spring.

Backup to the gas turbine generators is a non-redundant 230 VAC UPS system which is a battery system whose function is to provide power to maintain control and communication equipment for many hours. Another electrical backup system is the Essential Generator that is fueled with gas from the export pipeline.

One natural gas driven essential service generator will be provided for black start, and for SWP and subsea essential loads. The essential generator is sized to support starting of the main power gas turbine generators and can be started from the onshore CCR. The essential generator will be 400 VAC, 3-phase, 50 Hz, designed for the worst-case ambient conditions. The total calculated load essential load is 630 kW (kilowatt), excluding contingency. The essential power distribution system shall be designed to provide power to essential loads such as life safety, equipment protection, critical heat tracing, critical operating equipment and to safety and control systems such as fire and gas detection system, emergency shutdown and blowdown system, essential lighting, telecommunication, and process control system. For black start purposes the essential generator will be fed with fuel gas from the sales gas pipeline via an electric operated bypass valve.

If an event occurs that disrupts the use of gas turbine generators and essential generator, personnel will be required to visit the SWP by supply vessel for a manual restart. Proper SWP safety checks will be performed before attempting to restart essential generator. If the essential generator cannot be restarted, a portable generator will be brought to the SWP and an electrical connection at the sea deck is provided to plug in. The portable generator will be sized to provide power to the essential equipment of the gas turbine generators (lube oil pumps, heaters, starter). After the essential equipment is operating from the portable generator the gas turbine generators will be restarted with gas from the export pipeline.

For the initial startup of the SWP (1st time), a portable generator will be located on the platform to support the commissioning effort and used to power control, communications and critical SWP equipment. If buy-back gas is available in the export pipeline, that will be used to start-up the essential generator and gas turbine generators. If buy-back gas is not available, then first gas well will be opened to provide the initial gas for gas turbine generators start-up.

The main and essential power will be distributed via 6kV and 400V (Volt) switchboards, respectively, located in the LER. Main power is distributed at the same voltage generated in order to reduce weight/complexity of the platform. Feeders in cable trays will be used to provide power to various areas on the upper and lower deck of the offshore platform. For step-down distribution, 2 transformers of 6kV/0.415kV will provide power to LV switchgear where a secondary selective system will be incorporated. Transformers will be of the dry type and located inside LER. DEH and Pelican systems will be fed from the main 6kV switchgear.

LER will be utilized to provide efficient distribution of electric power on the SWP in order to minimize/optimize cable size and length and provide protection to equipment from the outdoor ambient environment. There will be one standalone 2-level pressurized LER where a transformer room separated by a switchgear will consume the first level and a battery & ICSS room along with an outside redundant HVAC system will encompass the second level. LER will house all necessary electrical, instrumentation, control, and fire protection equipment to serve the process and infrastructure requirements.

3.6.5.2.4 Gas Supply

Fuel Gas System

No connection to gas supply networks is planned during construction and operation phase.

Downstream of the gas dehydration unit and prior to entering the production pipeline, a slip stream of dehydrated sales gas is taken to be used as fuel gas for power generation and instrument gas for process control valves. The sales gas pipeline will function as a receiver for storing instrument gas during a shutdown.

During black start and early life operation, this gas stream is appropriately superheated with an electric heater to meet the requirements of the selected primary power generators and to avoid low temperatures due to Joule-Thomson effect in the letdown valves, where the pressure is reduced to about 30 barg. Temperature is kept to at least 0 °C before entering the fuel gas scrubber. A bypass is provided around the heater for mid and late life of the platform when the pressure decreases in the system.

Redundant parallel control valves are installed to insure a robust fuel gas and instrument gas supply. The parallel control valves provide redundancy to prevent the failure of a single control valve from causing a loss of fuel gas and instrument gas to the entire facility. A bypass is provided with a self-contained pressure regulator to supply Fuel Gas to the Essential Generator during black start. Bypass valves need to be manually operated to let the fuel gas from production pipeline to the superheater. Power will be supplied from UPS during this operation, thus restricting it to 15 kW. Once Essential Generator is online, power supplied to superheater will be fed from essential bus.

From the letdown station, fuel gas is routed to a 1x100% scrubber. The majority of the flow downstream of the Fuel Gas Scrubber is sent to the 3x50% Main Power Generators, where each package is provided with 2x100% Fuel Gas Filters, coalescer type, at the inlet to each turbine.

The remaining flow is sent to the Essential Generator and to a second let down station with the same configuration as previous valves (redundant parallel control valves and bypass with self-regulating valve for black start). The pressure is reduced to 7 barg to supply LP Fuel Gas to purge/blanket/stripping gas and to the Instrument Gas system. Relief valves set at 10 barg are located downstream of the control valves to provide overpressure protection to the end users.

Instrument Gas System

The project basis is to utilize a combination of hydraulic, pneumatic, and electric valves. For process control valves requiring pneumatic actuators, instrument gas drawn from the fuel gas system will be provided in lieu of instrument air.

A slip stream is taken from the LP Fuel Gas Header and routed to the Instrument Gas Filters prior distribution. The instrument gas distribution header will normally run at 7 barg and the low-pressure trip is set at 5.5 barg. This low-low pressure in the instrument gas distribution initiates a Process Shut-Down that is implemented by two out of three voting of pressure transmitters

The instrument gas is distributed to the instrument manifolds and other users. The returned instrument gas is collected and manifolded back together for disposal to the flare. This arrangement is to avoid local fuel gas emissions.

During black start, the three bypasses provided with self-contained pressure regulators need to be manually operated to let the fuel gas from production pipeline to instrument gas users. Power will be supplied from UPS to open the bypass shutdown valves during this operation. After gas dehydration unit is operating and fuel gas has been dehydrated, then bypass valves will be closed to establish normal operation to the fuel gas system.

3.6.5.2.5 Heating, Ventilation, and Air Conditioning

Offshore vessels will be provided with specific heating systems onboard of vessels.

HVAC system will be installed at the SWP to provide an acceptable environment (temperature, humidity, and filtration standards) within all offshore enclosed areas, and to maintain segregation of hazardous and nonhazardous areas by way of pressure differentials and/or dilution ventilation.

3.6.5.2.6 Telecommunication and Security

The main offshore communications and security systems will include:

- FOC and backup VSAT satellite;
- Ultra-High Frequency (UHF) radio system;
- Marine radio system;
- CCTV system;
- Hot-line voice system and satellite phones;
- Automatic Identification System.

FOC will transmit dedicated Voice (Hot) Lines between CCR and SWP, General Alarm (GA) as part of the SIS, Video Camera, Marine Radio and Two-Way Radio. Remote access capabilities for Company business network and to allow vendors to remotely access their respective networks from the SWP will be included.

In the unforeseen loss of FOC, the SWP is equipped with a backup satellite (VSAT) to provide data transmission between the SWP and onshore CCR. Bandwidth shedding/ network prioritization philosophy is to be outlined to determine what level of control and surveillance will be lost when on back-up VSAT rather than FOC. The SWP will continue to operate normally on the backup communication (VSAT). If both FOC and VSAT cannot transmit data from SWP to onshore CCR, the SWP will shut down safely based on the controls and interlock systems are located on the SWP.

UHF radio system

The system will provide radio communications for personnel on the platform, and the control room operators onshore for emergency and maintenance activities. The onshore and offshore portions of the system shall be linked via the fiberoptic cable to/from shore, so personnel can communicate between all sites. The control room operator interface to the radio system shall be available at the CCR console. The system shall consist of radio repeaters, handhelds radios, and control stations. The pedestal crane/operator shall be fitted with a UHF radio for loading and unloading activities.

Marine radio system

The system will provide communications between the supply/crew boats, SWP, drilling rig, and control room operators for marine operations. The marine radio on the SWP shall be located in the LER and include remote control functionality for operation in the Temporary Shelter. The radio on the SWP shall be linked to the control room operators via the fiber optic link. The control room operator interface to the SWP marine radio shall be

available at the CCR console. The pedestal crane/operator on the platform shall also be fitted with a marine radio for communications with supply/crew boats.

CCTV System

This system will provide high-definition video to the control room operators of most areas of the SWP. The CCTV system shall be a dual-purpose system for operations and security and include the most recent technology for unmanned platform monitoring and security surveillance. The system design shall provide a detailed view of most areas/equipment's on the SWP for the control room operators. Thus, should a major hazard event happen while operators are onboard SWP, control room operators will be able to potentially monitor major hazard event including areas impacted and thus help the onboard operators with situation awareness.

Hot-Line Voice System and satellite phones

A hot-line voice system will provide for immediate voice communications between the onshore control room operators and various locations on the SWP. Locations for the hot line will include the LER, Temporary Shelter, and the DEH Building. The operator interface for the hotline system will be available at the CCR console. Satellite phone capability will be made available for critical or emergency phone service from the SWP. Satellite phones also will serve as backup communications to the CCR in case of failure of the hot-line system.

Automatic Identification System

On the SWP, an automatic identification system will broadcast a safety message to similar equipped vessels near the SWP. The received data from similar equipped vessels in the SWP area will be displayed on a console screen at the CCR. It uses transponders on ships and will be used to eliminate vessel collisions with the SWP.

3.6.6 Description of the site restoration works in the areas impacted by the project execution

Upon completion of the project construction and installation works, site restoration works (ecological reconstruction for restoring the site to the original land quality) will be carried out in areas impacted by the onshore construction works sites (NGMS and microtunneling construction works sites), temporary construction roads and railway crossing, pipeline and fiber optic cable installation corridors, offshore trenches and other temporary areas impacted by the project execution.

The site restoration works will mainly include:

- Removal of buildings and facilities installed at the NGMS and microtunneling construction works sites;
- Removal/demolition of the temporary construction infrastructure (temporary construction roads, temporary railway crossing, technological platforms, parking areas, storage areas, etc.);
- Backfilling of the onshore, nearshore, and offshore pipeline and FOC installation trenches;
- Removal of construction and installation equipment used for project execution;
- Proper management of wastewater, waste, chemicals, and materials used during construction and installation phase in accordance with legal provisions;
- Rehabilitation (scarifying, backfilling, levelling, and revegetating, as appropriate) of all areas disturbed by the construction and installation works. Where contamination is identified, the site will be rehabilitated, and contaminated material will be managed in accordance with legal provisions;
- Site revegetation (use of grass seeds, fertilizers, and chemical amendments, as appropriate);
- Completion of the taking over protocol for restoring the onshore site to the original land quality.

The restoration works will be carried out by the appointed Contractors, under direct supervision of the Beneficiary, and will be executed in compliance with the relevant national permitting and environmental regulations.

3.6.7 New access ways or changes to existing ones

Onshore site access

From west to east, the onshore project site is currently crossed by the following transportation infrastructure (as shown in Appendix C):

- Communal Road DC4 located to the east of S1 site (cadastral number 109216);
- Railway line Constanta – Mangalia (cadastral number 109182) located between communal road DC4 and local road De277;
- Local Road De277 located between railway line Constanta – Mangalia and S3 site (cadastral number 109659);
- Local Road De259/4 located between S3 site and S4 site (cadastral numbers 109729 and 100819).

The onshore project area can be currently accessed using the existing communal or local public roads located within the project area, as listed below:

- S1 site can be accessed through the graveled communal road DC4 (4 m width) located to the east and local earth road De229/1 (4 m width) located to the north. Both local roads can be accessed from National Road DN39;
- S3 site can be accessed from Tuzla or Costinesti localities through the earth local road De277 (4 m width) located to the west;
- S4 site can be accessed from Tuzla or Costinesti localities through the earth local road De269 (4 m width) located to the east.

The access to the onshore area during project lifecycle will be ensured from the European Road E87 (National Road DN 39) through a new access road of approximately 2 km long that will connect the European Road E87 (National Road DN 39) located to the west of NGMS and CCR site and the communal road DC4 located to the east of the NGMS and CCR site. The new permanent access road will support the construction and operation of the onshore project facilities.

The access road construction project is not part of the project scope described in this presentation memorandum and will be subject to a separate permitting procedure.

In the early construction phase, until completion of the new access road to the NGMS and CCR sites, the project site will be accessed via the existing local roads within the project area (e.g., communal road DC4). However, the public access to the sea front via the local earth road De269 will not be impacted/blocked due to the onshore construction and installation works and no access to the construction sites will be ensured through this road.

After construction of the new access road to the NGMS and CCR construction works site, the access to the construction sites will be directly ensured from the National Road DN39 with no needs of accessing the sites via the existing local roads within the project site.

In addition, a temporary railway crossing and temporary construction roads will be installed during the construction phase in order to grant access of the personnel and equipment to the microtunneling construction and pipeline installation areas located on the left side of the railway line Mangalia – Constanta. After

completion of construction and installation works, the temporary railway crossing, and construction roads will be decommissioned, and the areas impacted by the temporary works will be restored.

Traffic safety signs will be installed at the temporary and permanent access roads and temporary railway crossing in accordance with specific legislation in force.

Offshore site access

Access to offshore components during construction and operation will be achieved by water or air.

During drilling/construction/installation phase, access to the offshore development will be realized by water with special construction and installation vessels with personnel shifts being transported by helicopter. The departure point for the support and transport vessels will be Constanta Port and for the helicopters will be one of the two airports located in Constanta County.

The SWP is designed as an unattended facility with only periodic visits by specialized operations personnel to carryout scheduled and unscheduled maintenance activities. The SWP will be accessible for normal operations by marine vessels only.

Marine fleet will include a fast supply vessel and or platform support vessel capable of reaching the SWP in approximately 8 hours from the Constanta area.

Vessels will be outfitted with a heave compensated gangway, and this will be the primary method of personnel transfer. Vessel will remain in close proximity to the platform (with gangway connected when possible) whenever personnel are on the platform.

For urgent operation support or for medical emergency evacuation, the SWP is fitted with a 17 m diameter helideck that can support a take-off weight of 6.8 tonnes, suitable for an AgustaWestland AW139, a 15-seat medium-sized helicopter.

Any visit to platform when no vessel is in attendance will be regulated by a visit specific platform operations and emergency response plan that will address operating criteria, e.g., duration of stay, weather windows, etc. along with plans for responding to emergencies during this operational phase.

3.6.8 Natural resources used during construction and operation

Natural resources (freshwater, sea water, mineral aggregates, etc.) will be used during construction and installation phase. The use of natural resources will be mainly indirect, the natural resources being purchased from authorized suppliers/contractors based on contractual basis.

Natural resources (natural gas, freshwater, petroleum-based fuels) will be used during the operation phase. The purpose of the proposed project includes utilization of a natural resource, respectively natural gas reserves from the Pelican South and Domino offshore gas fields, and delivery of dehydrated gas to the Romanian NTS. The estimated annual mean gas production daily rate is 19,000,000 m³/day, representing the average of daily production estimated for entire project, including all wells and both Domino and Pelican South gas fields.

During the operation phase, downstream of the gas dehydration unit and prior to entering the production pipeline, a slip stream of dehydrated sales gas will be used offshore as fuel gas for power generation and instrument gas for process control valves.

The freshwater sourced by onshore suppliers will be used for domestic and sanitary water needs at the onshore facilities and onboard of operations & maintenance offshore vessels.

Refined oil-based fuels (e.g., diesel, jet fuel) purchased from onshore authorized suppliers will be used during operation phase to source the diesel-powered generators (e.g., backup diesel powered generator installed at the CCR site, vessels power generators), offshore vessels and helicopters.

If required, mineral aggregates (e.g., sand, gravel, concrete) will be used for maintenance/rehabilitation of interior roads, parking, and technological platforms during operation of the onshore NGMS and CCR.

Onshore power will be ensured by connection to the local power network (ENEL) via the power transformer to be installed at the NGMS and CCR sites during construction phase.

3.6.9 Methods used in construction/demolition

3.6.9.1 Construction and Installation

3.6.9.1.1 Onshore NGMS and CCR

The onshore facilities will be constructed and installed on site in approximately one year and will consist of a prepared surface, foundations, skidded and un-skidded equipment, and prefabricated and stick assembled structures and piping assemblies.

The current assumption is that fabrication of equipment and modules will occur to the extent possible offsite at regional or international fabrication facilities. Pre-fabricated modules and equipment components will be shipped to Romania via marine transportation. Once in Romania, the components and equipment will be stored at a quayside storage facility until needed. When required at the construction site, the modules and equipment components will be loaded onto tractor trailers and transported to site via public roads and dedicated permanent access road. The site will have only limited temporary storage and does not have direct sea nor railroad access facilities in place.

The NGMS and CCR related construction and installation works will include:

- Construction of temporary construction works sites (NGMS construction site, microtunneling construction site, temporary railway crossing, access roads to construction sites, etc.) and installation of related facilities and equipment required for execution of permanent facilities;
- Construction/installation of NGMS facility (including pig receiver);
- Construction/installation of CCR facility;
- Construction/installation of other permanent facilities/areas at the NGMS and CCR sites (e.g., interior roads, platforms, buildings, fencing, landscaping, utilities, etc.);
- Execution of civil works leading to the Transgaz pigging facility (e.g., internal access road to this facility). (***Transgaz pigging facility is not part of this project and will be subject to a separate permitting procedure.***)

Following underground construction, equipment, piping, and buildings will be installed on their foundations. Details on building and equipment foundations were presented above in Section 3.6.2.1.

Interconnecting pipe and cabling will then be installed and tied in.

The onshore gas production pipeline isolation valve will be installed as part of the pipeline installation campaign.

Simultaneous operations with Transgaz pipeline and pigging equipment installation will be coordinated and managed to minimize disruptions to either party.

3.6.9.1.2 Gas Production Pipeline and Fiber Optic Cable

The full procedure for completion of GPP and FOC installation will include procurement, fabrication, transportation and installation, system completion (including flooding testing and gauging, system integrity testing, dewatering, disposal of residual hydrotest water, drying, and inerting), and commissioning support for 30-inch (762 mm) GPP and FOC from the SWP to the NGMS.

GPP components (pipeline end termination, riser tie-in spool induction bends, etc.) will be fabricated, integrated, completed, tested, and commissioned to the maximum extent possible prior to delivery to the installation.

It is envisioned that fabricated and manufactured components and equipment will be shipped to Romania via marine transportation. Once in Romania, the components and equipment will be stored at a quayside storage facility until needed. When required at the onshore construction sites, the components and equipment will be loaded onto tractor trailers and transported to site via public roads and dedicated permanent and temporary access roads. The construction sites will have only limited temporary storage and does not have direct sea nor railroad access facilities in place.

The line pipe (30-inch/762 mm outer diameter) for the GPP will be manufactured, internally coated for flow assurance purposes and externally anti-corrosion coated. Following completion of manufacturing and coating the pipe will be transported from the pipe coating mill(s) to their location for storage/ preparation for offshore installation. If required, the offshore GPP pipe will be counter bored, have concrete weight coating applied and have anodes, and other installation aids installed prior to the pipe being stored in preparation for delivery to the offshore installation vessel.

Tunnel jack pipe will be manufactured offsite at specialty concrete pipe manufacturing facility.

If required, the nearshore, shore crossing and onshore GPP pipeline will be prepared and stored prior to delivery to the NGMS/microtunneling construction sites or to the installation vessel. Any concrete weight coating required, will be applied onshore prior to delivery to the offshore installation vessel.

Upon completion of the offshore pipeline section, shore crossing, onshore pipeline section and NGMS construction, installation, and precommissioning, the gas production pipeline section and components will be tied in and made ready for dewatering, drying, inerting, and commissioning. The GPP will be flooded from subsea to onshore using filtered and treated seawater for hydrotesting and leak testing purposes.

The FOC will be manufactured, spooled, and stored at the manufacturer's facility for loading directly to the offshore installation vessel or delivering to the onshore construction sites. Miscellaneous FOC system components will be manufactured by various international manufacturing facilities and shipped to the regional shore base for shipment to the installation vessel or to the onshore construction site. A FOC section of approximately 5 km for installation between the onshore junction vault (near the shore crossing) and the CCR will be delivered to the NGMS location. The onshore section of FOC will have same specifications as the offshore section and will be manufactured by the same supplier.

Site acceptance testing will be conducted on the FOC (end-to-end) after installation. These tests will include optic loss measurements end-to-end, and terminal station equipment tests together with the submarine fiber cable. At the commissioning and site acceptance testing, the initial parameters will be recorded, and periodically the parameters will be retested in accordance with local government regulations, industry standards, and beneficiary preventive maintenance schedules.

The main construction and installation works of onshore, shore crossing and offshore GPP and FOC are summarized in the sections below of this document.

A. Onshore construction and installation of GPP and FOC

The onshore GPP section, block valve station, local roads and railroad crossing and tie-in to the pig receiver at the NGMS will be constructed utilizing conventional onshore construction methods and equipment.

The onshore GPP section will have approximately 1 km length and will be installed using conventional onshore pipeline installation and burial methods in a 2 m deep trench (with a burial depth to top of pipe of 1.25 m below natural ground level and a minimum separation of 0.5 m from any foreign pipeline or utility in any direction). Local roads and railway under crossings will be installed by auger bore or horizontal directional drilling (HDD) methods.

The onshore FOC will be installed using conventional onshore cable installation and burial methods and connected to the shore crossing and offshore sections by splicing the cables in a preinstalled underground cable splice vault. The FOC conduit will be installed with the onshore section of the GPP in a trench that will be lined with an impermeable geomembrane. A sand bed will be used to protect the geomembrane from the pipeline and FOC conduit. A weak concrete mix (8 MPa) will be used for backfilling (flowable fill) to the top of the loess soil layer. Native topsoil will be used from the top of the loess layer to the ground surface.

The cable will be buried to a depth of 1 meter as minimum onshore from the CCR to the entry of the shore crossing microtunnel. For railroad and road crossings, cable will be installed at a depth of 1.5 m as minimum.

A temporary pipeline corridor will be ensured for installation of onshore production pipeline and FOC. The underground pipeline installation corridor will have a total surface of 16,523 m² (Appendix C). The installation corridor will have a width of 21 m (13.3 m width on the southern part of the pipe position and 7.7 m width to the northern side of the pipe position) along the entire length of approximately 787 m. The pipeline installation corridor will not be fenced and will be marked by safety tapes. The execution of pipeline corridor will include removal of the vegetal soil layer on a thickness of 30 cm. The removed vegetal soil will be stored on a width of 4.26 m at the southern limit of the working corridor.

Local roads and railway under crossings will be installed by auger bore or HDD methods. A temporary pipeline corridor will be ensured for execution of local roads and railway undercrossing by the onshore production pipeline and FOC conduit (Appendix C). The total surface temporarily occupied for execution/installation of pipeline undercrossing of railway and local roads is 539 m². The execution of the corridor will include removal of the vegetal soil layer on a thickness of 30 cm and signaling within the area.

Transgaz will be responsible for construction, installation, tie-in, mechanical completion, and commissioning of the pig launcher, onshore pipeline, and any other facilities required downstream of the meter station for tie-in to the NTS.

B. Shore Crossing Construction/Installation of GPP and FOC

The shore crossing tunnel and pipeline will be installed prior to the offshore pipeline installation in order to avoid the requirement for an above water tie-in if possible. This interface point between the offshore pipeline installation contractor and shore crossing installation contractor will be closely monitored. Where possible shore crossing construction activities will be scheduled and performed in compliance with any and all local regulations to reduce the environmental impact. However, during tunneling operations, 24 hour/day operations will be required, and environmental mitigation measures (e.g., noise abatement, dust control, etc.) will be utilized if required to comply with all applicable local environmental regulations.

In order to minimize the environmental impact as much as possible on the ROSCI 0273 Cape Tuzla marine protected area, the shore crossing undercrosses this area. Offshore dredging for shore-crossing construction and near shore pipeline on-bottom stability will only be required adjacent to this Natura 2000 environmentally sensitive area. Dredging methods will be selected to minimize turbidity and it will be monitored during dredging operations.

The tunnel and near shore pipeline execution plans will require anchored vessels. For safe control of station keeping and vessel movements, these vessels require some anchors to be set within the Natura 2000 environmentally sensitive areas.

The main shore crossing related construction and installation works will include:

- Preparation of construction site area;
- Construction of the tunneling launch shaft;
- Execution of tunneling works;
- Preparation of pipeline for installation, including stringing, welding, testing;
- Offshore recovery of the tunneling machine and preparation of pipe trench;
- Installation of the pipeline;
- Backfilling of the tunnel and offshore trench;
- Reinstating works.

The above execution plan is based on the preparation of a pipeline on shore which is pulled to sea for a later connection to the offshore pipeline section. The design of the landfall tunnel describes an alternative which alters the pipeline installation process to pull ashore a pipeline from an offshore vessel. This may be considered at a later stage and is not considered to represent a significant change to the execution of the onshore works.

An estimated total construction duration of 13 months has been determined from start of shore crossing construction to the end of the reinstating works.

The execution of the shore crossing will include both onshore and offshore construction/installation works, as detailed in the paragraphs below.

Onshore construction/installation works

The main sequences of the onshore microtunneling construction and pipeline installation works include:

- Preparation of the onshore construction site, including construction access road, tunnel site, launch shaft, and pipeline stringing yard, welding, and storage areas;
- Execution of tunneling works; and
- Pipeline installation.

Onshore Microtunneling Construction Site

The onshore construction works will start with the site preparation and installation of the onshore construction works site, including tunnel site organization, pipeline stringing yard, pipeline storage area, welding area and temporary access roads to the construction works site. The details of the construction works site and associated facilities and construction methods are presented in Section 10.

Construction of launch shaft

The launch shaft will be executed by either driving sheet piles or drill secant piles. Water will be required for making up drilling fluid during the drilling of secant piles. The excess water will be collected in two

containerized steel tanks and tested prior to disposal for parameters required by the disposal facility. Each tank will have a volume of 30 m³ and the following dimensions: 6 m x 2.5 m x 2 m.

After the shaft walls are built, the shaft can be excavated (wet or dry) depending on ground water level. The excavated soil from the shaft (approximately 3,270 m³) will be stored on a temporary storage area of 1,100 m² (55 m x 20 m), near the launch shaft area. It is currently anticipated that a volume of approximately 1900 m³ from the total volume of excavated soil from the launch shaft will be used for shaft backfilling at the end of the works, and a volume of approximately 1,370 m³ resultant from drilling of secant piles will be transported with trucks to an authorized disposal facility.

Then the concrete floor is poured. After curing of the concrete, the shaft may still be partially filled with ground water. This water will be tested inside the shaft prior to pumping out and disposing. The water will remain in the shaft until the test results are available.

Once the shaft is constructed, it will be equipped for microtunneling operations (seal, jacking frame, tunnel boring machine, etc.).

Execution of tunneling works

Once the construction works site is completed, mobilized and all equipment is installed thereon, the tunneling process will start with the installation of the tunnel boring machine (TBM) into the executed launch shaft.

At the front of TBM the soil is mechanically excavated with a rotating cutter head and hydraulically transported back to the microtunnel construction site through a closed drilling fluid system.

On site, the water based drilling fluid is processed in a separation plant, where soil or rock is separated from the drilling fluid through a series of sieves and hydro cyclones. The soil will temporarily be stored on site for sampling and testing prior to disposal to an appropriate/licensed site. The total estimated amount of soil to be excavated by the tunneling process is 4,030 m³.

Soil cuttings (excavated soil from the tunneling process) are separated from drilling fluid in the separation plant and will be stored on site within the separation plant area. Depending on the testing regime additional space may be used on site, before transporting the cuttings to a licensed facility. The soil cuttings dumping area at the separation plant may be surrounded by a berm and sealed with a polyethylene (PE) foil to prevent residual drilling fluid draining to the soil. Alternatively, the dumping area can be constructed with a concrete floor.

Recycled drilling fluid is reused and pumped from the separation plant back to the TBM. Although it is 'recycled' in the separation plant some will have to be replaced/exchanged to keep optimal usage parameters. Upon requirements, the used drilling fluid can be stored on site in container units or an additional tank with enough storage capacity that need to be installed on site. Then, the used drilling fluid is tested and disposed at a licensed facility.

The drilling fluid is not only used to convey excavated material from the TBM but also to stabilize the soil face in front of the TBM and to lubricate the outside of the tunnel pipes.

Due to the permeability of the ground, the drilling fluid will continuously penetrate and partially seal the formation. The majority of this volume is excavated during the advance of the TBM, but a fraction of the drilling fluid may not be reclaimed. To make up for these losses, new bentonite with water drilling fluid will constantly be mixed on site to replenish the system.

During tunneling execution, water is required to make up drilling fluid and to clean the tunnel. The total estimated amount of water required for completion of the tunneling process (including drilling fluid system and cleaning) is 5,450 m³.

The tunneling operation is carried out over a total length of 890 m until the TBM reaches the offshore target pit where it will be recovered from a vessel.

Prior to the recovery of the TBM however, all service lines will be removed from the tunnel and conduits for the FOC and backfilling lines will be installed.

The installation of the conduits is often combined with the tunnel clearing works to limit the number of transports into the tunnel. The HDPE conduits are mounted to the tunnel ceiling with brackets, where they are interconnected by means of electro couplings.

Onshore Pipeline Installation

During the tunnel construction, assembly of the pipeline for its installation into the tunnel is carried out inside the string yard area (see details of the area in Section 10).

Individual pipes are transported to site for temporary storage, lined up, welded, and tested.

The limited overall string yard length requires the pipeline to be prepared as five partial strings. During the installation process, these strings will be moved laterally and welded together at the forward end of the string yard.

Movement of the complete strings will be carried out by lifting plant such as side booms or crawler cranes. As a safer alternative, lateral movement by means of bogies is proposed. This way the string will only have to be lowered from the bogies onto the installation rollers.

The pipe string will be pulled towards the tunnel on a series of roller supports and along a curved alignment. For the insertion of the pipe into the tunnel it is required to extend the launch shaft for approximately 50 m length.

While the sheet piles for this shaft extension may be installed together with the launch shaft piles, excavation of this shaft section may only be carried out once the main jacks and abutment have been removed after completion of the TBM drive.

To protect the pipeline from mechanical damage in the tunnel and on the seabed, protective collars and sleeves will be mounted around the pipe during the installation process.

Offshore construction/installation works

The main sequences of the offshore microtunneling construction and pipeline installation works include:

- Recovery of the tunnel boring machine;
- Excavation of the offshore reception pit and pipe trench;
- Offshore installation of the pipeline into the tunnel.

As the first step, the recovery pit will be excavated to remove coarse material or rock from the exit pit area. The reception pit will have 26 m length x 22.5 m width and will occupy a total surface of 585 m².

The pit will then be backfilled with gravel and ballast material may optionally be placed over the tunnel end to secure the tunnel against flotation.

After these preparations, the tunneling operation are carried out until the TBM reaches the reception pit. The tunnel is now fully constructed, and all services are stripped from the tunnel and conduits are installed.

In the next phase, the tunnel has to be flooded to prevent the tunnel from becoming buoyant when the TBM is extracted. Tunnel flooding is commonly done through inlets on the TBM that are operated by divers (as all electrics and other equipment has been stripped from the tunnel). After flooding the tunnel, the TBM can be recovered and the water level in the tunnel/shaft corresponds to the sea water level.

After excavation the TBM will be lifted from the tunnel end and transported to shore.

Then the excavation of the transition to the offshore trench (1,600 m length x 17 m width, total surface of 27,200 m²) is completed and the pipeline is pulled from onshore through the tunnel to the end of the trench. Excess water that is displaced by the pipeline is relieved to sea.

After installation of the production pipeline and the FOC conduit, the trench and shore crossing reception pit will be backfilled using locally sourced gravel.

After the trench and exit pit are backfilled, the tunnel will be filled from onshore with a grout material. For this operation the seaside end of the tunnel will to be closed by backfilling the offshore transition shaft. Grouting will be wet in wet, the grout being poured through dedicated fill lines to the low end of the tunnel. To grouting operation will displace the sea water from inside the tunnel. This excess water will no longer reach the sea, as the tunnel end is blocked and will be displaced into the shaft. This water will be pumped and temporary stored on site into the storage water tank until testing and disposal.

The individual offshore construction phases are addressed in the paragraphs below.

Excavation of reception pit and pipe trench

For the preparation of the reception pit and pipe trench, an estimated total volume of 40,950 m³, respectively 950 m³ for execution of the recovery pit and 40,000 m³ for execution of the pipe trench, will be excavated and transported to an authorized dedicated dumping area.

Due to the seabed composition of weathered limestone with larger blocks or rock fragments, this material will have to be excavated by suitable equipment.

Typically, a back-hoe excavator on a spud leg pontoon will be used for this work. Excavation with this equipment can be carried out to water depths beyond 20 m.

The excavated material will be loaded to (split) barges and sailed to an authorized onshore dump site or relocated on the seafloor to an area designated by the competent authorities.

Recovery of the tunnel boring machine

For recovery and excavation of the TBM from the reception pit different equipment will be used. Sand from the pit will be removed by mass flow excavation tools (pumps) and diving operations will be required to activate a separation module on the TBM.

Once the TBM has been uncovered and pushed off the tunnel end it may be recovered by a lifting vessel. It is envisaged, that excavation, diving, and recovery works will be executed from a single vessel / barge.

Depending on the lifting capacity of the vessel, and distance from port, the TBM will either be fully recovered to deck or transported to port suspended under water.

Pipeline installation

For the installation of the pipeline from onshore to offshore a pull barge with a winch will be deployed. The pull capacity for this project has been estimated as 500 t, for a length of 2,500 m pipeline and a submerged weight of 0.9 kN/m.

To pull the pipe, a pull wire is led through the tunnel and attached to both the pipe at the onshore site and the winch frame on the pull barge. During the pull operation, the winch and barge are moved together with the pipe, while pull forces are introduced to a back-anchoring system.

As a result, a working corridor (as shown in Appendix C) is required for the pull operation. Anchor handling vessels and tugs are used to position and secure the barge.

C. Offshore Construction/Installation of GPP and FOC

The GPP offshore section will be installed by recovering and tying into the end of the near shore pipeline section and laying the pipeline toward the SWP using a DP S-lay pipeline installation vessel. As a contingency in case the GPP landfall crossing and near-shore sections have not yet been installed, the GPP offshore section can be installed with a pipeline end flange via a dead-man anchor. Thus, the offshore section can be tied later into the near shore section using a flanged spool piece tie-in. As a third alternative, if the GPP landfall crossing and near-shore sections have not yet been installed, the offshore section can be initiated from a dead-man anchor, installed, and tied into the shallow water section using the over water tie-in method at a later date.

The GPP will be installed in a trench for a portion of its length for on-bottom stability purposes, and the FOC will be laid in a trench over its entire length for stability and/or over trawl protection purposes. Pre-trenching is considered the base case for the GPP while simultaneous installation trenching is considered the base case for the FOC. GPP on-bottom stability will be managed through a combination of pipe steel wall thickness, concrete weight coating and the noted trenching methods utilizing constructability/installability as a key decision criterion. A combination of post installation jetting and pre-installation trenching utilizing dredging is expected.

Dredged material from the pipeline installation on the sea floor will be set aside and after the pipeline is installed it is put back on top of it.

Installation of offshore seafloor rock berms using conventional fall pipe rock dump vessel will be required for pre-installation seabed remediation in specific areas along the GPP route for span mitigation at fault crossings.

The FOC can be installed before or after the offshore SWP has been installed. The J-tube on the SWP jacket shall be designed to facilitate installation of FOC riser prior to and/or after installation of the topsides.

The near shore FOC conduit and GPP section will be installed to the offshore pipeline installation vessel tie-in point and abandoned. The near shore pipeline and FOC trenches will be excavated in advance of pipeline and FOC conduit installation activities.

A plow will be used for FOC trench to lay the cable in the trench and allow to backfill naturally for the entire length.

3.6.9.1.3 Shallow Water Platform

SWP will be fabricated off site by specialized companies and will be delivered to location by boat in 2 separate pieces, respectively:

- SWP Steel Pile Jacket, including:
 - 2 preinstalled risers;
 - 7 preinstalled J-tubes of which five have planned use and 2 are spares;
 - 5 Caissons;
 - Sea deck to support pull-in of the FOC, umbilicals, the Domino DEH electrical cable, and the Pelican heated flexible flowline;

- SWP topsides gas processing facilities.

The foundation of steel pile jacket will include the installation of eight skirt piles (2 skirt piles per leg).

The jacket and topsides will be designed and fabricated to comply with transportation motions and height restrictions.

The jacket will be loaded onto a transportation and launch barge by skidding, sea fastened and transported to a regional fabrication/staging site for installation preparation.

The foundation piles will be loaded onto a transportation barge, sea fastened and transported to a regional fabrication/staging site for installation preparation.

For the base case float over topsides installation method is assumed, the topsides will be loaded onto a transport barge or heavy transport vessels by skidding, sea fastened and transported to the regional fabrication/staging site for installation preparation.

All structures that are not fabricated in the Black Sea will be designed to the 58 m height restriction of the Istanbul Bosphorus Bridges to allow for transport via cargo barge or heavy lift vessel. This height restriction is from the waterline to the top of loaded out structures. In addition to the 58 m clearance, an appropriate safety factor will be applied.

The topsides and jacket will undergo preparations for the final offshore tow and installation while at the regional fabrication/staging location. After preparations are complete, the jacket will be towed offshore.

The jacket, with 2 external buoyancy tanks pinned to jacket legs, will be end launched from the transport barge after final sea fastening removal, then upended by ballasting with crane assist and set on the seafloor. The skirt piles will then be stabbed and driven to grade utilizing underwater hammers. Skirt pile sizing will be monitored as part of the constructability effort to ensure that the pile cap, hammer, and crane block will be submerged after self-weight penetration.

The SWP jacket will be designed to facilitate installation of heated flexible flowline, umbilicals, FOC, and DEH cable risers prior to and/or after installation of the topsides.

After jacket installation and final quayside preparations, the topsides will be towed offshore for the float over operation. A barge or heavy lift vessel with a breadth of no more than 36.6 m will be used to float the topsides over the jacket.

The helideck, crane, and vent stack will be evaluated for installation at the regional fabrication/staging site, at the installation site, or at post topsides installation.

Once the topsides structure is set on the jacket, the following Subsea Umbilicals Risers and Flowlines installation activities and offshore Hook-Up and Commissioning activities will be performed prior to handing the facility over to the start-up team:

- The topsides will be welded out to the jacket;
- Flowline, GPP, umbilical, DEH power cable, and FOC tie-ins to the facilities will be performed;
- Flowline and GP system leak testing and dewatering will be performed;
- Final system completion activities will be performed.

The heated flexible flowline, umbilicals, and DEH cable layout at the SWP will be designed to facilitate first end riser installation while the FOC riser can be installed either first or second end. The SWP jacket shall be designed

to facilitate installation of heated flexible flowline, umbilicals, FOC, and DEH cable risers prior to and/or after installation of the topsides.

3.6.9.1.4 Subsea systems

The full development of offshore subsea systems (manifolds, production flowlines, umbilicals, risers, etc.) will include onshore fabrication and transportation, offshore installation, system completion and commissioning activities.

The subsea equipment and components will be fabricated, integrated, tested, and completed to the maximum extent possible prior to leaving the fabrication or integration facilities. Fabrication will take place in multiple worldwide locations.

Offshore vessels capable of performing the work and also capable of meeting the Bosphorus Strait bridge passage height restriction will be utilized for installation of subsea systems. If required, vessels will be modified to enable crane and other vessel mounted structures to meet the Bosphorus Strait bridge passage height restriction.

Flexible pipe/umbilical installation vessel, flowline installation vessel or either dedicated Multi-Purpose Service Vessel - MSV will be used for installation of the following subsea components:

- Production manifold foundation and the manifolds;
- Flexible and/or rigid flowline and well jumpers between the subsea flowlines, manifolds, and trees;
- The hydraulic and electrical flying leads between the subsea umbilical termination assemblies, subsea distribution units, manifolds, and trees.

The subsea equipment components, insulated rigid steel flowline with DEH cable, in-line tee assembly, flowline end termination and subsea pig launcher, and heated flexible flowline, umbilicals, well jumpers, flowline jumpers, and flying leads will be installed by the offshore subsea umbilicals, risers and flowlines contractor. The subsea trees and flowbases/tubing-hanger spools will be installed separately by drilling contractor.

The general execution philosophy for the offshore installation work will be to initiate the flowline installation as early as possible.

It is currently envisioned that flowline and DEH piggyback cable will be installed simultaneously and strapped together during flowline installation operations. At this time, installation of the flowline using the same S-lay vessel that installs the GPP is envisioned as the most likely offshore installation option.

The Domino Flowline DEH power cable riser section can be installed and connected to the piggyback cable either by the pipeline installation vessel or separately by the flexible pipe / umbilical installation vessel or a dedicated MSV.

To reduce riser tie-in spool length, the Domino flowline route assumes flowline installation prior to installing the SWP. If the schedule changes and the SWP is installed prior to the flowline, then the flowline routing will require adjustment at the base of the jacket to provide adequate clearance between the pipelay vessel and the SWP.

It is currently envisioned that the Pelican South heated flexible flowline and DEH power cable riser will be installed by a dynamic positioning flexible pipe / umbilical installation vessel initiating the installations with 1st end riser installations at the SWP and laid from the SWP to PSDC1 for the flowline and the subsea junction box location for the DEH riser.

The PSDC and DODC1 umbilicals will be installed from the SWP J-tube risers to the drill centers, and the DODC2 umbilical will be installed in either direction. It is currently envisioned that the control umbilicals will be

installed by a deep-water flexible pipe / umbilical installation vessel. Any direct connection of the control umbilicals to the SDUs and / or manifolds can be performed either by the deep-water flexible pipe / umbilical installation vessel or a dedicated MSV.

Offshore trenching and naturally backfilling of the Pelican South flowline and umbilicals over their entire length and Domino flowline and umbilical from the SWP to the 200 m water depth contour will be required for over-trawl protection. A marine mechanical trenching machine will be used to run over pipe.

3.6.9.2 Wells Drilling

The well construction scope includes drilling and completion of gas producers in the Miocene formation of the Neptun Deep Block in the western Black Sea. In general, the wells will be located in the main reservoir compartments of both the Domino and Pelican South fields.

Wells will be drilled in a continuous drilling and completion campaign using a thruster-assisted/moored Mobile Offshore Drilling Unit - MODU. Tubing head spools and subsea trees are planned to be installed offline using a multi-purpose support/installation vessel. After tie-in to the subsea facilities, the wells will be unloaded to the SWP.

Drilling Rig

The drilling rig must provide a stable platform from which the seabed can be drilled with the following operating characteristics:

- Operating conditions riser connected, drilling conditions – maximum wind velocity 17.7 m/s, wave height 2.8 m, surface current speed 0.35 m/s;
- Operating conditions riser connected, non-drilling conditions – maximum wind velocity 30.6 m/s, wave height 6.8 m, surface current speed 0.67 m/s;
- Minimum Transit speed (calm seas): 2.32 m/s.

Drilling rig storage capabilities ensure that will accommodate the storage of casings sufficient marine riser for maximum operating depth and drill pipe and drill collars; cement; barite/bentonite; brine for drilling fluid; chemicals for drilling fluid; rig fuel; potable water; and fresh water for drilling.

The drilling rig will be fitted with desalinization systems in order to generate potable water onboard the drilling vessel at a minimum rate sufficient for maximum capacity of personnel on board.

The drilling rig will be powered by a minimum 32.065 kW main engine and emergency generator capable of simultaneously supplying the services necessary for the safety of personnel in an emergency for 18 hours. The drilling rig will utilize low sulfur diesel fuel with < 0.1% sulfur.

The rig Top Drive will have a minimum static load rating of 810 MT Main, 405 MT Aux, a minimum horsepower rating of 745.7 kW (continuous) and a minimum pressure rating of 517 bars. Top drives will be capable of continuous operation at 250 rpm and 81.34 kN-m.

The drilling rig will be equipped with the following installations: Electric Logging Unit, drilling fluid logging unit, Subsea support facility with vertical access to the sea, MWD/Directional Drilling unit, Cement Unit, ROV Units, Gravel Pack Skid Equipment, High Flow Brine Filtration Equipment, Coil Tubing Unit, Bucking Unit, Simplified landing String / Subsea Test Tree – HPU (hydraulic power unit), Umbilical reeler, Completion control line reelers, Workshop containers, Contingency equipment and Slickline/Eline units.

The drilling rig will be equipped with two deck cranes able to reach any area on the deck including the helideck and well test areas. Each crane will have a 10 MT minimum dynamic lift capacity with the whip line. The maximum anticipated crane load during the drilling and completion is 65 MT.

The drilling rig will be fitted with a helicopter landing platform designed to accommodate a S92 Helicopter, or equivalent helicopter.

The helideck will have fueling capacities with a permanent storage capacity for 4,500 liters (1,190 gal) of tested, usable helicopter fuel. The helideck will be fitted with foam monitor stations with heat protection shields and at least two Stairway Exits.

Wells

The wells will be drilled to total depth in the Miocene and completed across the target reservoir intervals with deviated wellbores. Wells will be designed to maximize wellbore productivity and to deliver from 2,825,214 m³/day to 4,237,820 m³/day at initial reservoir conditions. Tubing size is planned to be 7-inch (177.8 mm) outside diameter. All wells will be equipped with permanent downhole pressure and temperature gauges.

The wells drilling will be done progressively, in successive stages, until the final depth. The general well structure construction will consist of:

- 36-inch (914.4mm) casing:
 - Drilling a 42-inch (1066.8 mm) wellbore through jetting with water-based drilling fluid (WBDF);
 - Installing the 36-inch (914.4 mm) casing;
 - Cementing the casing up to mudline;
- 22-inch (558.8 mm) casing:
 - Drilling a 26-inch (660.4 mm) borehole with WBDF;
 - Installing the 22-inch (558.8 mm) casing reduced to 20-inch (508 mm);
 - Cementing the casing up to mudline;
 - Installing a 18-3/4-inch (476.25 mm) and 1,035 bars well head.
- 13-3/8-inch (339.72 mm) casing:
 - Drilling a 17.5-inch (444.5 mm) borehole with NAF;
 - Installing the 13-3/8-inch (339.72 mm) casing;
 - Partial cementation of the casing.
- 10-3/4-inch (273.05 mm) casing:
 - Drilling a 14-inch (355.6 mm) borehole with NAF;
 - Installing the 10-3/4-inch (273.05 mm) casing reduced to 9-5/8-inch (244.47 mm);
 - Partial cementation of the casing.

- 5-1/2-inch (139.7 mm) screen base pipe:
 - Drilling a 9.5-inch (241.3 mm) borehole with NAF, to the final depth of the well;
 - Installing the 5-1/2-inch (139.7 mm) screen base pipe to the final depth of the well;
 - Installation of filter gravel package.

During well drilling different measurements will be done down the borehole.

Details on each well structure is presented below.

Domino 1-1 well will be drilled at water depth of -978 m MSL (Mean Sea Level). The total depth (TD) of the well bore will be -3,133 m MSL TVD (True Vertical Depth).

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -978 m MSL to -1,078 m MSL TVD, cemented up to ML (Mud Line);
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -978 m MSL to -1,619 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -978 m MSL to -2,035 m MSL TVD, cemented between -1,678 m MSL and -2,035 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) from -978 m MSL to -2,542 m MSL TVD, cemented between -2,182 m MSL and -2,542 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,242 m MSL to -3,133 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -978 m MSL and -1,619 m MSL TVD;
- NAF between -1,618 m MSL and -3,133 m MSL TVD.

A total of 4,278 m³ of WBDF and 2,053 m³ of NAF will be used in order to reach the TD.

Domino 1-2 well will be drilled at water depth of -978 m MSL. The TD of the well bore will be -3,125 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -978 m MSL to -1,078 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -978 m MSL to -1,619 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -978 m MSL to -2,050 m MSL TVD, cemented between -1,678 m MSL and -2,050 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -978 m MSL to -2,500 m MSL TVD, cemented between -2,150 m MSL and -2,500 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,500 m MSL to -3,125 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -978 m MSL and -1,619 m MSL TVD;
- NAF between -1,619 m MSL and -3,125 m MSL TVD.

A total of 4,278 m³ of WBDF and 2,310 m³ of NAF will be used in order to reach the TD.

Domino 1-3 well will be drilled at water depth of -978 m MSL. The TD of the well bore will be -2,615 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -978 m MSL to -1,078 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -978 m MSL to -1,620 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -978 m MSL to -2,110 m MSL TVD, cemented between -1,831 m MSL and -2,110 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -978 m MSL to -2,457 m MSL TVD, cemented between -2,374 m MSL and -2,457 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,457 m MSL to -2,615 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -978 m MSL and -1,620 m MSL TVD;
- NAF between -1,620 m MSL and -2,615 m MSL TVD.

A total of 4,278 m³ of WBDF and 2,189 m³ of NAF will be used in order to reach the TD.

Domino 2-1 well will be drilled at water depth of -949 m MSL. The TD of the well bore will be -2,701 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -949 m MSL to -1,049 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -949 m MSL to -1,648 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -949 m MSL to -1,937 m MSL TVD, cemented between -1,726 m MSL and -1,937 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -949 m MSL to -2,410 m MSL TVD, cemented between -2,125 m MSL and -2,410 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,419 m MSL to -2,701 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -949 m MSL and -1,648 m MSL TVD;

- NAF between -1,648 m MSL and -2,701 m MSL TVD.

A total of 4,581 m³ of WBDF and 1,933 m³ of NAF will be used in order to reach the TD.

Domino 2-2 well will be drilled at water depth of -949 m MSL. The TD of the well bore will be -2,693 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -949 m MSL to -1,049 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -949 m MSL to -1,648 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -949 m MSL to -2,130 m MSL TVD, cemented between -2,109 m MSL and -2,130 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -949 m MSL to -2,500 m MSL TVD, cemented between -2,235 m MSL and -2,500 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,500 m MSL to -2,683 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -949 m MSL and -1,648 m MSL TVD;
- NAF between -1,648 m MSL and -2,683 m MSL TVD.

A total of 4,581 m³ of WBDF and 2,474 m³ of NAF will be used in order to reach the TD.

Domino 2-3 well will be drilled at water depth of -949.5 m MSL. The TD of the well bore will be -2,690 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -949.5 m MSL to -1,049 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -949.5 m MSL to -1,648 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -949.5 m MSL to -2,086 m MSL TVD, cemented between -1,954 m MSL and -2,086 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -949 m MSL to -2,430 m MSL TVD, cemented between -2,165 m MSL and -2,430 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,430 m MSL to -2,690 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -949.5 m MSL and -1,618 m MSL TVD;
- NAF between -1,648 m MSL and -2,690m MSL TVD.

A total of 4,575 m³ of WBDF and 2,029 m³ of NAF will be used in order to reach the TD.

Pelican South 1-1 well will be drilled at water depth of -126.5 m MSL. The TD of the well bore will be -3,135 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -126.5 m MSL to -252 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -126.5 m MSL to -810 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -126.5 m MSL to -1,875 m MSL TVD, cemented between -1,476 m MSL and -1,875 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -126.5 m MSL to -2,943 m MSL TVD, cemented between -2,500 m MSL and -2,943 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,943 m MSL to -3,135 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -126.5 m MSL and -810 m MSL TVD;
- NAF between -810 m MSL and -3,135 m MSL TVD.

A total of 4,716 m³ of WBDF and 2,411 m³ of NAF will be used in order to reach the TD.

Pelican South 1-2 well will be drilled at water depth of -126.5 m MSL. The TD of the well bore will be -3,135 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -126.5 m MSL to -252 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -126.5 m MSL to -810 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -126.5 m MSL to -1,904 m MSL TVD, cemented between -1,433 m MSL and -1,904 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -126.5 m MSL to -2,984 m MSL TVD, cemented between -2,655 m MSL and -2,984 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,984 m MSL to -3,135 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -126.5 m MSL and -810 m MSL TVD;
- NAF between -810 m MSL and -3,135 m MSL TVD.

A total of 4,716 m³ of WBDF and 2,307 m³ of NAF will be used in order to reach the TD.

Pelican South 1-3 well will be drilled at water depth of -126.5 m MSL. The TD of the well bore will be -3,157 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -126.5 m MSL to -252 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -126.5 m MSL to -810 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -126.5 m MSL to -1,842 m MSL TVD, cemented between -1,445 m MSL and -1,842 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -126.5 m MSL to -2,665 m MSL TVD, cemented between -2,465 m MSL and -2,665 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,665 m MSL to -3,157 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -126.5 m MSL and -810 m MSL TVD;
- NAF between -810 m MSL and -3,157 m MSL TVD.

A total of 4,716 m³ of WBDF and 2,191 m³ of NAF will be used in order to reach the TD.

Pelican South 1-4 well will be drilled at water depth of -126.5 m MSL. The TD of the well bore will be -3,167 m MSL TVD.

The well casing will consist of the following:

- 36-inch (914.4mm) casing from -126.5 m MSL to -252 m MSL TVD, cemented up to ML;
- 22-inch (558.8 mm) reduced to 20-inch (508 mm) casing from -126.5 m MSL to -810 m MSL TVD, cemented up to ML;
- 13-3/8-inch (339.72 mm) casing from -126.5 m MSL to -1,822 m MSL TVD, cemented between -1,428 m MSL and -1,822 m MSL TVD;
- 10-3/4-inch (273.05 mm) reduced to 9-5/8-inch (244.47 mm) casing from -126.5 m MSL to -2,903 m MSL TVD, cemented between -2,490 m MSL and -2,903 m MSL TVD;
- 5-1/2-inch (139.7 mm) screen base pipe from -2,903 m MSL to -3,167 m MSL TVD.

The well bore will be drilled using two types of drilling fluid:

- WBDF between ML at -126.5 m MSL and -810 m MSL TVD;
- NAF between -810 m MSL and -3,167 m MSL TVD.

A total of 4,716 m³ of WBDF and 2,385 m³ of NAF will be used in order to reach the TD.

The schematic well execution/drilling is presented in Figure 6.

Figure 6 – Schematic well execution

The wells will be constructed using dual-zone intelligent completions. Each zone will be selectively managed by means of a surface-controlled downhole valve installed as a part of the upper completion. Zonal isolation will be achieved using open-hole packers installed as a part of the lower completion.

Well integrity throughout the drilling program will be maintained using features of the program such as:

- Well control practices and procedures;
- Sufficient drilling fluid density for overbalance;
- Surface hole drilling and surface casing setting to address any potential shallow hazards;
- Intermediate and production drilling and casing set through a blow-out preventer;
- Casing seats selected to provide integrity for well control; and
- Testing of well control equipment.

The wells will be fitted with 5-inch (127 mm) x 2-inch (50.8 mm) vertical trees with tubing head spool, connection to a single-header manifold, flexible jumpers with vertical connectors at tree end and horizontal connectors at the manifold end and a static electro-hydraulic and chemical umbilical.

The shut-in tubing pressures at the subsea wellheads are:

- Domino – 319 bar;
- Pelican South – 321 bar.

The wells are expected to be high permeability and therefore would require no stimulation. Thus, no acid returns are expected. Limited NAF returns are expected over the initial months of production based on unplanned losses into the formation during the drilling process.

When the wells will be handed over from drilling, associated brine containing Sodium (Na) and Calcium (Ca) will be transported back to SWP.

Due to the unconsolidated nature of the reservoir, open-hole completions with sand control will be required for each well. Sand control will be achieved through the combination of direct wire wrap screen technology and open-hole gravel pack technology. Downhole zonal isolation and active zonal control are required in a select number of wells and will be achieved through the use of intelligent completion technology.

Sand detection monitors will be installed on each production tree to detect a completion failure in case of occurrence. When detected, the wells will be choked back to a sand-free rate or shut in until the sand control completion is repaired.

Fines are expected to be deposited in the Domino flowline in mid to late life due to low velocities after the flow rate in the line drops below 10,735,811 m³. Fines are expected to be deposited in the Pelican South flowline in late life after flow rate in the line drops below 2,825,213 m³.

3.6.9.3 Precommissioning/Commissioning

System completion will be completed to the greatest extent practical at the fabrication/manufacturing facilities and the regional fabrication/staging site prior to mobilizing for onshore and offshore installation. The list of key system completion activities to be performed before onshore and offshore infrastructure start-up is shown below:

- Testing and verification of topside facilities following fabrication and prior to sail away, including:
 - Completion of loop and function testing;
 - Gas turbine generators commissioning performance testing at factory acceptance testing, and up to fail-to-fire in the fabrication yard, then full testing, load shedding, etc. offshore after hydrocarbon gas;
 - Commissioning performance testing of Essential Power Generator at factory acceptance testing, up to fail-to-fire testing onshore, and then full testing offshore with hydrocarbon gas;
 - Circulation cleaning of process and utility systems;
- Prior to installation, testing (including hydrotesting and drift pigging, as applicable) of the following:
 - All jacket and topside piping including the preinstalled pipeline, flowline risers, and mechanical, control, and electrical systems;
 - All subsea equipment components and controls systems, well and flowline jumpers, and riser tie-in spools;
- External seal testing all subsea flowline and riser connections;
- Flooding, pigging, chemical inhibition, and hydrostatic testing of the entire GPP, as well as testing of subsea flowlines prior to installation of jumpers and riser tie-in spools;
- Bulk dewatering and chemical treatment of residual hydrotest water in the entire GPP and flowline systems; the activity will be performed using pig trains with fresh water and thermodynamic hydrate inhibitor slugs driven by compressed air to discharge the filtered and chemically treated seawater hydrotest medium to sea. The bulk dewatering will be followed by packing the gas production and flowline systems with 95% to 98% nitrogen to a predetermined pressure for start-up readiness;
- Drying the GPP to midstream gas transmission pipeline criteria;
- Hydrotesting umbilical tubes and testing and verification of umbilical controls and communications functions after installation;
- Leak testing of umbilical systems after installation of hydraulic flying leads;
- Leak testing of the entire GPP, flowline systems (after installation of jumpers and riser tie-in spools), and topsides piping and equipment;
- Electrical continuity and function checks of all subsea controls after installation of electrical flying leads and fiber optic flying leads;
- Testing and verification of fiber optic communication cable integrity after installation;

- Testing and verification of topside facilities and functions after post installation hook-up (including utility systems re-commissioning and testing with communication to the onshore control room prior to the introduction of hydrocarbons);
- Testing and verification of onshore GPP facility functions after installation and hook-up;
- Well clean-up to the SWP;
- Precommissioning and commissioning activities of onshore components, such as:
 - Onshore GPP section cleaning, flooding, hydrotesting, pigging, gauging, leak testing, dewatering, drying/preservation;
 - FOC insertion loss and optical time domain reflectometer tests for each installed segment from NGMS to CCR;
 - Onshore pigging equipment cleaning, hydrotesting, gauging, pigging, leak testing, and loop checks;
 - Precommissioning and commissioning of NGMS related equipment (e.g. filter separator, ultrasonic metering skid, etc.) at modularization yard (hydrotest, flushing cleaning, dewatering, drying, cleanliness checks and calibration; vessel closure inspection/certification, preservation/inert vessel; instrument loop tests; prove alarm, trip, controls to ICSS; calibration of level transmitters of the separators by filling with water, drain, dry; test prove meter loop, etc.) and onshore site (e.g. loop checks, function test analyzers on calibration gases, recheck systems after transport, turnover to operations);
 - Gas analyzers loop checks and commissioning of all analyzers (e.g., gas chromatograph);
 - LER equipment testing (e.g., functional acceptance testing of assembled system, ground system verification, factory acceptance testing integration test on applicable equipment installed in building, etc.);
 - Process Shutdown System and Emergency Shutdown (ESD) precommissioning (e.g., loop checks, function test and devices) and commissioning activities (e.g., function testing);
 - Process control system precommissioning and commissioning activities (e.g., loop checks, function tests and devices);
 - Onshore venting system pre-commissioning at modularization yard (e.g., flushing and cleaning, leaking test, loop checks, function test, preserve) and onshore site (complete cleanliness blows, drying; loop checks or reconfirmation of loops already tested; leak test of entire system, etc.) and commissioning activities (e.g., function test of entire system, function test vent as part of ESD testing);
 - Fire & Gas System precommissioning and commissioning (e.g., complete function loop testing; installation and commissioning of catalytic and electrochemical fire and gas devices, complete systems testing, etc.);
 - Cathodic protection precommissioning and commissioning activities (e.g., installation of monolithic isolation joints or comparable equipment for electrical isolation of NGMS piping from the upstream offshore production and downstream Transgaz pipelines; complete mechanical completion and loop checks; test current and integrity of anode systems; energize system and verify controls, current and integrity for impressed current systems; etc.);

- CCTV system pre-commissioning (e.g., loop checks, function test and devices) and commissioning (e.g. system integrity checks, certifications verification, commissioning of CCTV cabinet and cameras, integrated function testing, cameras adjusting, ensuring full mechanical functionality and remote control);
- HVAC system checks and tests conducted at modularization yard (e.g., loop checks, test fans, louvers, and dampers) and onshore site (e.g., loop checks and stating testing on mechanically complete system; energization of the fans, louvers and dampers; carrying out electrical & mechanical function check for condensing unit; verification system performance; leak/pressure test building and enclosure with HVAC, etc.);
- UPS precommissioning activities (e.g., complete installation checks; loop checks; inspection prior to energizing, etc.);
- Other pre-commissioning and commissioning activities of the onshore equipment/systems (e.g. power distribution system, standby power generator, sewage systems, water supply systems/facilities, fire-fighting equipment, lighting and grounding system, telecoms management system, and other systems/equipment installed at the onshore site).

3.6.9.4 Decommissioning/Demolition

The current land use of the onshore NGMS and CCR sites (site S1, cadastral number 109216) is agricultural with no presence of existing buildings, infrastructure, or utilities on site.

The existing local roads, railway line and buried utilities (e.g., water lines) present within the onshore project area will be impacted by the installation works of onshore section of proposed pipeline and fiber optic cable route. The underground shore crossing microtunnel will under cross the local road De 259, the cliff and the beach.

The execution of onshore infrastructure does not include any demolition works of existing infrastructure present within the project area (e.g., local roads, railway line, existing utilities).

However, upon completion of the project construction and installation works, site restoration works (e.g., removal/demolition of temporary infrastructure, building, facilities, and equipment installed at the construction works sites; management of wastewater, waste, chemicals, and materials in accordance with legal provisions, site rehabilitation and restoration to the original land used) will be carried out in areas impacted by the onshore construction and installation works. In addition, once access to the shore crossing and beach side of the railroad is no longer required, the temporary rail crossing road will be decommissioned and restored to the required condition.

No demolition/decommissioning works are planned to be performed during the construction and installation phase of the project offshore infrastructure.

3.6.10 Execution plan

The current assumption is that fabrication of equipment and modules will occur to the extent possible offsite at regional or international fabrication facilities. The components and equipment will be stored at the quayside storage facility before shipping to onshore or offshore sites for installation.

According to the current schedule, it is anticipated that construction and installation of project infrastructure will be completed in approximately 2 years. The main onshore, shore crossing and offshore construction/installation sequences are summarized in the paragraphs below.

The onshore and offshore facilities will operate for a life period of 20+ years. At the completion of end life, the facilities will be decommissioned/abandoned according to specific decommissioning/abandonment plans prepared in compliance with specific legislation in force at that date. The decommissioning/abandonment

works will be performed in accordance with an appropriate execution plan (schedule) that will be part of decommissioning/abandonment plans.

Construction/installation of onshore infrastructure

The main phases of the onshore construction/installation activities will include:

- Construction/installation of temporary NGMS and CCR construction works site (including site preparation, earthworks, storage areas, installation of containers, etc.) and other temporary works (e.g. pipeline installation working corridor, temporary railroad crossing, temporary construction roads, etc.);
- Construction/installation of permanent NGMS and CCR sites (including site preparation, earthworks, civil works, installation of buildings/offices and equipment, utilities, etc.) and other related facilities (utilities, interior roads and platforms, parking, fencing, landscaping, etc.);
- Installation of onshore section of GPP (including block valve site) and FOC, including execution of local roads, railway, and existing utilities crossings (e.g., existing RAJA water pipeline);
- Decommissioning of the temporary construction works (construction works site, temporary railroad crossing, temporary construction roads, etc.) and restoration of the land impacted by the construction/installation works.

The NGMS and CCR sites will consist of a prepared surface, foundations, skidded and un-skidded equipment, and prefabricated and stick assembled structures (prefabricated structural steel components), buildings (e.g. CCR building, LER, gas chromatograph and moisture analyzer shelter), equipment packages (e.g. electrical heaters, pig receiver, filter separator, transformers, standby diesel generator and incorporated diesel storage tank) and piping assemblies (including pipe, fittings, and valves), and interior roads, parking and platforms.

The installation of onshore GPP and FOC (including block valve station and crossings) will be managed to avoid simultaneous operations conflicts with the other onshore facilities.

At the completion of the construction/installation works the temporary works will be decommissioned and the sites impacted by the construction/installation works will be restored to the original use.

For certain operations, seasonal work restrictions and mitigation measures will be considered during construction phase and temporary works decommissioning and site restoration due to project site proximity to residential and tourist areas.

Construction/installation of GPP and FOC shore crossing

An estimated total construction duration of approximately **13 months** has been determined from start of shore crossing construction to the end of the reinstating works. Tunneling related works will be executed in 3-shifts, 24/7 h, respectively 10 work hours/day for other microtunneling related construction works. The execution plan of the shore crossing will include both onshore and offshore works as summarized below.

- Onshore works:
 - Construction of temporary access roads, reinforcement of construction works sites (tunneling site, stringing yards, pipe storage area), and reinstatement of temporary access roads, stringing yard, and tunneling construction site at the completion of construction works;
 - Launch shaft related works, including launch shaft construction, launch shaft conversion, and launch shaft removal;

- Tunneling construction works, including mobilization, tunnel drive (launching, operation, and arrival), tunnel preparation (strip out, install conduits, tunnel flooding), and equipment demobilization;
- Pipeline construction, including delivery, stringing, welding, nod-destructive testing, hydrotesting (preinstallation) and weld goose neck;
- Tunnel backfilling, including equipment mobilization, backfilling, and equipment demobilization.
- Offshore works:
 - Execution of tunnel boring machine recovery pit;
 - Recovery of tunnel boring machine;
 - Excavation of offshore trench;
 - Backfilling (partial) of the offshore trench;
 - Pipeline installation.

At the completion of the shore crossing related construction and installation works, the construction sites will be decommissioned, and the onshore and offshore areas impacted by the works will be restored.

Construction/installation of offshore infrastructure

According to the current schedule, it is anticipated that offshore infrastructure construction/installation will be completed in one season (year). The main phases of the offshore installation activities will include:

- Installation of offshore gas production pipeline (offshore installation vessel operations included):
 - Installation of prefabricated piping assemblies - offshore pipeline to nearshore pipeline tie-in spool, pipeline end termination and riser to pipeline tie-in spool;
 - Foundation execution for pipeline end termination;
 - Crushed stone/gravel reinforcement for rock berms at seabed fault features;
 - Prefabricated and manufactured pipeline installation and precommissioning aids;
- Offshore installation of Domino flowlines (offshore installation vessel operations included):
 - Installation of prefabricated piping assemblies – flowline end terminations, in-lie tee assembly, riser to flowline tie-in spool, flowline jumpers, subsea pig launcher and in-line direct electrical heating components;
 - Foundations execution for flowline end terminations, in-line tee assembly, and subsea pig launcher;
 - Installation of prefabricated and manufactured flowline installation and precommissioning aids;
- Offshore installation of Pelican South prefabricated and manufactured flowline and precommissioning aids (offshore installation vessel operations included);
- Offshore installation of Pelican South and Domino control umbilicals;

- Offshore installation (installation vessel operations included) of subsea equipment (manifolds foundations, manifolds, flowline jumpers, well jumpers, flying leads, flowline riser tie-in spools and over trawl protection structures, including:
 - Subsea production manifold foundation suction piles for Domino and Pelican South drilling centers;
 - Installation of subsea production manifolds (pre-filled with preservation fluid) for Domino drill centers (DODC1 and DODC2) and Pelican South drill center – PSDC1 (outfitted with a pre-installed trawl protection structure);
 - Installation of over trawl protection structures for PSDC1 wells;
 - Installation of rigid flowline jumpers at DODC1 and DODC2;
 - Installation of rigid well jumpers at DODC1 and DODC2;
 - Installation of production gas pipeline and Domino flowline riser tie-in spools at SWP;
 - Installation of GPP tie-in spools between offshore and near shore pipeline sections;
 - Installation and precommissioning of prefabricated and manufactured aids;
- Offshore SWP jacket and topside installation - installation vessel operations and hook up contractor personnel and accommodation vessel operations;
- Offshore installation of fiber optic cable between shore crossing and SWP.

Drilling campaign execution plan

The total period for drilling and completion is estimated to take approximately 80 days per well, with 5 wells available at startup, 4 wells at Domino (at least 3 wells at DODC2), and 1 well at Pelican South. All wells will be drilled in a continuous drilling and completion campaign using a thruster assisted, moored MODU, with an option to drill additional wells.

The remaining production wells are expected to be drilled and completed while the project infrastructure is operating.

3.6.11 Relation with other existing or planned projects

Existing or planned projects to be performed in the area of the Project Neptun Deep are presented in Tables 18 and 19.

Table 18 - Existing projects and activities in the area of the Neptun Dee Project

Project name	Project description	Connection to Neptun Deep Project
Reduction of coastal erosion Phase II (2014-2020), Beneficiary: The National Administration "Apele Române" – Water Basin Administration "Dobrogea – Litoral (ABADL)	The aim of this project is to ensure adaptation to climate change, prevention, and risk management by erosion protection of the shoreline through building dykes and beach enlargement. The project is funded by European funds under the Large Infrastructure Operational Program (POIM), Priority Axis 5 - Promoting adaptation to climate change, prevention and risk management, Specific Objective 5.1 - Reducing the effects and damage to the population caused by associated natural phenomena. Implementation period: 2018-2023	As part of this project, erosion protection works will be carried out in an area located between shipwreck Evangelia and Forum Hotel in Costinesti. The closest Neptun Deep Project component to the location of erosion protection works is represented by the microtunnel that is located approximately 1.5 km north to the northern limit of the above-mentioned erosion protection works area.
Cliff consolidation works in the area of Tuzla locality, Constanta County, Beneficiary: The National Administration "Apele Române" – ABADL	The aim of the project is to prevent the extension of landslides and to increase the tourist attractiveness in the coastal sector of Tuzla commune. The works will involve works to ensure a cliff slope of 1:1.5 like excavations and fillings, berms 2.5 m wide and 4 m high from the ground, protection of stone and concrete blocks at the base of the cliff and build an alley of concrete slabs. Currently, the works are suspended due to litigation between ABADL and Tuzla City Hall.	The cliff consolidation works will be carried out on the cliff located along the eastern side of the project onshore site. The Neptun Deep microtunnel will under cross the cliff area. The microtunnel will be drilled in the rock layer below the cliff without impacting the cliff or its consolidation works.
The regional water and wastewater infrastructure development project in the operating area of S.C. RAJA S.A. Constanta, between 2014-2020 - Rehabilitation and extension of distribution and sewerage networks, rehabilitation of wastewater pumping station and wastewater discharge pipes from Tuzla, Constanta County, Beneficiary: RAJA S.A. Constanta	The general objective of the project is to continue the strategy for the development of the water and wastewater sector, in order to achieve the targets assumed by Romania through the Treaty of Accession to the European Union, by preparing the Financing Application for accessing European funds for environmental infrastructure in the 2014 programming period. -2020 and the necessary technical-economic documentation. The purpose of the project also includes the rehabilitation and extension of the distribution and sewerage networks, rehabilitation of the wastewater pumping station and wastewater discharge pipes from Tuzla locality, Constanta County. The project is financed by European funds within the Large Infrastructure Operational Program (POIM), Priority Axis 3 - Development of environmental infrastructure in conditions of efficient management of resources, Specific Objective 3.2. - Increasing the level of collection and treatment of urban wastewater, as well as the degree of ensuring the drinking water supply of the population. Implementation period: Ongoing	The project also includes rehabilitation of a 500 mm discharge pipe that crosses from south to north the OMV Petrom owned site S3, by removing the old water pipeline and installing a new one along the local road De 277. The Neptun Deep Project related onshore section of gas production pipeline and fiber optic cable will under cross the new RAJA discharge pipe.
BRUA / Phase 2 - Black Sea Coast - Podisor Pipeline (RO) for collecting the gas from the Black Sea,	The project "Black Sea Coast – Podisor Pipeline (RO) for collecting the gas from the Black Sea" consists in the construction of a telescopic pipeline with diameters of 48-inch (Dn 1200) and 40-inch (Dn 1000), respectively, designed to transport natural gas to a pressure of 63 bar. The pipeline will have a total length of	As part of BRUA Phase 2 Project, a Transgaz Tie-In Point facility connected to the Neptun Deep Project NGMS will be constructed. The Transgaz Tie-In Point <i>(facility not part of the project scope described in this memorandum, subject to a separate permitting</i>

Project name	Project description	Connection to Neptun Deep Project
Beneficiary: The National Natural Gas Transport Company Transgaz S.A.	approximately 308 km and will connect the Black Sea coast with the Podisor Technological Node going through Amzacea and Vlasin. The pipeline will transfer the gas into the NTS with the possibility of transmission through the BRUA pipeline to other European countries the expected gas production of ExxonMobil and OMV Petrom from the Domino and Pelican South fields in the Black Sea. Implementation period: 2020-2022	procedure) will be installed on the private land owned by OMV Petrom with superficies rights for EMEPRL (site S1, cadastral number 109216). The Black Sea Coast – Podisor Pipeline will transport the gas produced by the Neptun Deep Project into the Romanian NTS.
Shipping in the Black Sea	Shipping in the Black Sea is performed along recommended and unilateral routes using traffic separation schemes, especially in congested areas such as the Bosphorus and the approach towards it and at large harbors such as Odessa and Constanta. Each of the Black Sea bordering countries uses sea transport in its trading and commercial activities.	Shipping lanes from Ukrainian and Romanian harbors and the Bosphorus and/or Bulgarian harbors are crossing the proposed Neptun Deep offshore production pipeline route.
Fishing	Professional fishing activities are expected to take place between 20 and 150 m water depth based on natural and legal limits. Practically, fishing is limited to shallower water depths due to the capabilities of most of the used vessels. The Romanian fleet operates up to 30 to 35 marine miles out in the Black Sea, or a water depth of approximately 60 m because of the characteristics of the vessels and their limited autonomy.	Fishing grounds are overlapping with the Neptun Deep production pipeline route and shallow water subsea infrastructure (e.g., Pelican South infrastructure).

Table 19 – Potential future projects in the area of the Neptun Deep Project

Project name	Project description	Connection to Neptun Deep Project
Neptun Deep – Construction of Access Road, Site Organization, Provision and Connection to Utilities, Access Road to them, related to Natural Gas Metering Station and Control Center, Beneficiary: ExxonMobil Exploration and Production Romania Limited and OMV Petrom	The general objective of the project is to build a new access road connecting the National Road DN39 to the onshore NGMS and CCR sites. The construction works for the new access road are anticipated to be performed before the NGMS and CCR construction.	The new permanent access road will support the construction and operation of the onshore Neptun Deep project facilities.
Construction of roundabout on the National Road DN39 - km 23 + 190, Tuzla commune, Constanta County, Beneficiary: The Romanian National Company for Road Infrastructure Administration (CNAIR)	The purpose of the project is to build a roundabout on the National Road DN39 - KM 23 + 190 to connect the new proposed access road for Neptun Deep Project and the new proposed access road to Tuzla airport, with DN39. The construction works for the new roundabout are anticipated to be performed before the NGMS and CCR construction.	The proposed roundabout will connect the new proposed access road for Neptun Deep Project with DN39.
Neptun Deep - Power supply for the NGMS and CCR Sites, Beneficiary: ExxonMobil Exploration and Production Romania Limited and OMV Petrom	The purpose of the project is to provide an electrical connection for the NGMS and CCR sites during construction and operation phases. The works will include construction and installation of: <ul style="list-style-type: none"> • An electrical Over Head power Line (OHL) connected to the existing electrical network in Costinești; • An electrical power transformer that will be installed on the east side of the NGMS site (20/0.4kV – 630kVA); and • An underground cable connection between the OHL network in Costinești and the substation (1,459 m length). 	The proposed power transformer will provide power for construction and operation of onshore project components (NGMS, CCR, etc.).
Midia Gas Development project, Beneficiary: Black Sea Oil & Gas SA together with its co-venture partners, Petro Ventures Resources SRL and Gas Plus Dacia SRL	Midia Gas Development project consists of the Ana and Doina gas fields which were discovered in 2007 and 1995 respectively. Both are of latest Miocene to Dacian age, shallow, marine sandstone (delta-tops), biogenic gas reservoirs, some 120 km offshore Romania, in the XV Midia Shallow area where the water depths are of 70 meters. In terms of facilities, the project consists of 5 production wells (1 well at Doina field and 4 wells at Ana field), a subsea gas production system over the Doina well which will be connected through a 18 km pipeline with a new unmanned production platform located over Ana field. A 121 km subsea pipeline will ensure the delivery of the gas from Ana platform to the shore, where a 4.1 km underground pipeline will connect to the new onshore gas treatment plant. The processed gas will be delivered into the NTS	The offshore Ana production platform of Midia Gas Development project is located at approximately 50 km distance west from the SWP of the Neptun Deep project and at approximately 4 km distance north from the gas production pipeline. By the time of installation and construction of the offshore facilities of Neptun Deep project, all the offshore facilities of Midia Gas Development project will be in place and under operation.

Project name	Project description	Connection to Neptun Deep Project
	operated by Transgaz at the gas metering station to be found within the onshore gas treatment plant. Planned implementation period: expected project drilling and construction completion: end of 2021.	
Modernization and Development of Airport Infrastructure at Tuzla Airport, Beneficiary: Regional Air Services SRL	The general objective of the project is development and modernization of airport infrastructure at Tuzla Airport. The main objectives of the project are construction of runways for the operative movement of the planes, rain collection system, light beacon installation for operation at night and in low visibility conditions, construction of the perimeter road inside the airport, construction of a perimeter security fence, development of a CCTV system for monitoring air operations, construction of a control tower and related annexes to ensure the safety and security of air traffic. Planned implementation period: 2018-2023	Tuzla Airport site is located at approximately 2 km north-west of NGMS. Tuzla Airport will have a new access road connected to the National Road DN 39 Constanta - Mangalia. The new roundabout planned to be constructed on the National Road DN 39 will provide access to both the new access road to the airport and the new access road to the Neptun Deep onshore facilities.
AGRI – LNG project, Beneficiary: The developer of this project is SC AGRI LNG Project Company SRL, shareholders ROMGAZ (Romania), SOCAR (Azerbaijan) and GOGC (Georgia)	AGRI is the first LNG (Liquefied Natural Gas) project to be developed in the Black Sea, which aims to transport natural gas from the Caspian Sea region to Europe. The Azerbaijan-Georgia-Romania-Hungary (AGRI) interconnector has been designed as an integral part of the Southern Corridor, providing the shortest direct route for Caspian gas to the European market. AGRI will transport Azerbaijani natural gas, which will be liquefied in Georgia, then transported across the Black Sea to a regasification terminal to be built on the Romanian Black Sea coast. From that moment, the gas will be pumped through the Romanian natural gas transmission system to Hungary, through the Interconnector between Romania and Hungary (Arad - Szeghed) and will be further transported to the European market. Planned implementation period: expected start of the project is 2026	LNG transport ships could cross above the Neptun Deep production pipeline, depending on the final position of the AGRI onshore terminal. No official information was available on the status of the project implementation.
White Stream, Beneficiary: White Stream LTD	The White Stream gas pipeline is a proposed cross-infrastructure pipeline in the Black Sea for gas transport from Turkmenistan through the second branch of the trans-Caspian pipeline directly to Romania and other EU member states. The White Stream pipeline is a component of the Southern Gas Transportation Corridor. The White Stream underwater pipeline will connect the South Caucasus pipeline to the Romanian terminal in Constanta. From there, the gas can flow through existing infrastructure from Ukraine, Slovakia, and the Czech Republic to Central and Northern European countries with some volumes of gas also supplying the new BRUA pipeline. Initial planned implementation period: 2018-2023	The White Stream pipeline could cross the Neptun Deep production pipeline depending on the final position of the onshore terminal. The European Network of Transmission System Operators for Gas (ENTSO) included both the Trans-Caspian Pipeline (TCP) and the White Stream project in Annex A of the Ten-Year Network Development Plan 2018 (TYNDP 2018). No official information was available on the status of the project implementation.

Project name	Project description	Connection to Neptun Deep Project
Romania – Turkey High Voltage Direct Current (HVDC) Interconnection Link, Beneficiary: C.N.T.E.E. TRANSELECTRICA S.A.	The project consists of a transmission link connecting the grid system in Romania at Constanta Nord substation, with that in Turkey at the Alibeyköy substation. The connection point of the cable to the Romanian power system will be the Constanta Nord 400 kV substation. The connection point to the Turkish power system will be the Alibeyköy 380 kV substation to the north-west of Istanbul. The approximate transmission length is 400 km. The project aims to strengthen the transmission capacity and improve the power exchange in the south-east Europe region, thereby enabling improved supply security, quantity, and quality. Planned implementation period: 5.5 years (no start date identified)	The Romania – Turkey HVDC cable could cross the Neptun Deep production pipeline. No official information was available on the status of the project implementation.

3.6.12 Details on the alternatives that have been considered

3.6.12.1 Alternative "Zero"

The zero alternative consists of non-implementation of the proposed Neptun Deep project. Non-implementation of the project means that there will be no natural gas development of Domino and Pelican South fields and construction and operation of onshore and offshore gas related infrastructure will not be performed.

For zero alternative, the studied areas will keep the current baseline conditions. By non-implementation of the project, no environmental or social impact will be generated over the onshore studied area. Similarly, no impact (neither adverse or positive) will be generated over the coastal and offshore marine environment or existing operations (e.g., shipping, fishing) from project studied area.

If the Project will not be started/implemented, the Neptun Deep project implementation objectives, such as: securing the national energy independency, ensuring feasible energy costs to public and private customers, additional revenues to local and national budgets, transfer of the dehydrated gas to the Romanian NTS will not be finally met. The project purpose and justification are detailed in Section 3.2.

The potential impact (adverse or positive) that might be generated by the project implementation will not occur and the current onshore, coastal, and offshore environmental and social conditions will remain unchanged.

3.6.12.2 Engineering/technological alternatives

During the early project stages of concept evaluation and selection, options to develop the gas reservoirs found in the Domino and Pelican South fields were further developed to understand the facilities and technologies required, confirm the ability to achieve business objectives, assess financial attractiveness, and identify potential safety and environmental risks and issues including those associated with major accident hazards.

A number of engineering concepts were considered at this early stage including consideration of aspects such as:

- Risk reduction associated with major accident hazards;
- The potential location of the gas processing facilities (onshore vs offshore);
- Whether the gas processing facilities could be designed to be operated as an unmanned facility;
- Whether the wellheads were located on the seabed or on an offshore platform;

- Hazards associated with the location of flowlines, pipelines, and processing facilities;
- Overall reduction in GHG emissions through use of technology.

Initially, the project concept was envisioned as minimum offshore facilities, including a well gathering platform, a gas pipeline to shore and, a staffed onshore treatment plant that included facilities such as gas dehydration, power generation and relief systems. After further assessment and obtaining more understanding of the socioeconomic and environmental drivers of the region, the concept evolved to a safer design which minimized the onshore facilities, moving most of the equipment offshore, and optimizing the offshore platform design in order to accomplish a normally unattended concept, where the operations and maintenance crew only need periodic visits to perform their planned activities.

There were also a number of concepts evaluated addressing system and equipment selection and design that are documented in the facility engineering technical decisions document. In terms of environmental performance and protection then a series of independent BAT evaluations have been completed addressing:

- Flaring, venting and valve actuators;
- Power and heat generation; and
- Chemicals and discharges to sea.

The independent BAT reports included evaluation of various technical alternatives with emphasis on environmental performance, technical applicability, and financial criteria. The results of these studies were used within the design concept selection process.

In terms of shore crossing construction, different construction methods alternatives were studied and assessed for selection of the best method for execution of shore crossing in the project area. The considered alternatives for shore crossing construction included the following methods: open cut, horizontal directional drilling, and microtunneling. The alternatives for pipeline installation in the shore crossing area include installation in either of two directions: offshore to onshore or vice versa, independent of the construction method used for shore crossing.

The outcome of the evaluation and selection process is the concept outlined in this Presentation Memorandum, respectively: the subsea tie-back of the Domino and Pelican South fields to the normally unmanned Neptun Deep SWP and further the dehydrated gas is transported through the gas production pipeline to the onshore NGMS for transfer to the Romanian NTS. This option best meets the overall business objectives when considering factors such as environmental risks and concerns, safety of personnel and the community, suitability and availability of technologies, and commercial considerations. The main factors considered for the selection of design concept include:

- Provision of unstaffed offshore platform with:
 - Digital remote monitoring and control from onshore CCR and worldwide assistance;
 - Fiber optic cable with VSAT back-up;
 - Electrically heated flowlines for hydrate mitigation;
 - Gas dehydration/drying unit technology for offshore platform dehydration system;
 - Simple process (e.g. no compression);
 - 3-month planned maintenance frequency (part of equipment specification & monitoring equipment).

- Design to facilitate the execution, including:
 - Single season offshore installation;
 - S-lay installation of deep water Domino DEH flowline;
 - Installation of platform topsides by float-over;
 - Minimized pipeline trenching / dredging;
 - Flexibility in tie-in method/sequence for onshore/offshore gas production pipeline interface;
 - Float-over topside concept facilitates minimizing mobilization cost and critical path offshore Hook-Up and Commissioning duration;
- Provision of single carbon steel Domino flowline to both drill centers (DODC1 and DODC2) provided with dual diameter flowline to ensure solids transport, as well as subsea pig launcher and pigs suitable for solids transport during dual diameter pigging;
- Provision of 30-inch (762 mm) production pipeline with internal flow coating (instead of 32-inch - 812.8 mm);
- Use of jacket legs for liquid storage (methanol, TEG, open drain) at the SWP;
- Simplified concept of SWP (e.g., removal of diesel and closed drain systems from platform, use of gas vs instrument air);
- SWP provided with flare for routine emissions, vent for emergency blowdown;
- Main access to the SWP ensured via vessel with heave compensated gangway, helideck for emergency only;
- No fiscal metering provided at offshore platform;
- Ensuring of integrated platform process and subsea controls;
- Use of 5-inch (127 mm) trees (instead of 7-inch - 177.8 mm);
- Provision of electric actuated chemical injection valves on subsea manifolds;
- Provision of Domino flowline in carbon steel not Corrosion-Resistant Alloy (CRA) or CRA-lined;
- Provision of CRA lined flexible flowline for Pelican.

3.6.13 Other activities that may occur as a result of the project

Upon project development completion, further connections to gas transmission network of new customers may occur due to the extension of natural gas NTS.

The access to the onshore area during project lifecycle will be made through a new access road (***not part of the project scope described in this presentation memorandum, subject to a separate permitting procedure***) that will connect the European Road E87 and the communal road DC4. The new permanent access road will support the construction and operation of the onshore project facilities.

A separate project for electrical power connection of onshore facilities to the local power supply ***network (not part of the project scope described in this presentation memorandum, subject to a separate permitting***

procedure) will be developed by the project beneficiaries. The extension of existing local power network up to the onshore project site may contribute to the further development of local power distribution network by connection to the new power line of other local landowners (currently not connected) from onshore site area.

The project development will consider use of natural resources, mineral aggregates, fuels, chemicals, building materials and other specific products that will be procured from certified local, regional, and international suppliers/contractors based on specific contractual agreements. The raw materials will be transported to the onshore and offshore project sites through authorized vehicles/vessels.

The project will not include any connections to the local water supply and wastewater sewage networks. The water supply will be ensured from water sources located within project area based on specific agreements signed with the regional water supply operator. The onshore transport and treatment of wastewater generated during project lifecycle will be performed by certified operators based on specific contractual agreements.

All waste generated during project lifecycle will be properly managed on site and will be transported and disposed to authorized waste management facilities, as per specific waste management regulations in force.

Onshore and offshore project operations will be supported by a shore base that will include port facilities and warehousing to provide storage, loading and unloading, trucking, security, monitoring and tracking of goods, material equipment and supplies. Helicopter services including medevac, search and rescue, and transport of personnel for time sensitive operations will occur during project lifecycle.

Operations and maintenance activities will require regular marine support of a supply vessel that can function as personnel transport from shore to SWP, accommodation vessel, supply vessel with sufficient deck space to transport materials and crane.

3.6.14 Other permits required for the project

According to the Urbanism Certificate no 85 from 29.04.2021 issued for the onshore project facilities by Constanta County Council, the following endorsements / approvals were requested in order to obtain the Construction Permit:

- Endorsements and agreements on urban utilities and infrastructure:
 - Water supply;
 - Sewage network;
 - Power supply;
 - Waste management/sanitation.
- Other Endorsements and Agreements:
 - Fire protection;
 - Public health.
- Specific endorsements / agreements of the central public administration and / or their decentralized services:
 - Cadaster and land registration office - OCPI – update of topographical support/cadaster;
 - Ministry of Culture – Constanta County Directorate for Culture;
 - Ministry of National Defense - MAPN – Major General State;

- Ministry of Internal Affairs - MAI;
- Romanian Intelligence Service - SRI;
- Ministry of Agriculture and Rural Development – Constanta County Directorate for Agriculture;
- Land Improvement Agency - ANIF - Territorial Branch Dobrogea;
- CN CF CFR SA – National Railway Authority, Regional Railway Agency Constanta;
- National Civil Aviation Authority - AACR;
- Water Basin Administration Dobrogea – Litoral – ABA-DL;
- National Coastal Zone Committee - CNZC;
- Transgaz Medias – Territorial Branch Constanta.

According to Offshore Law no 256 from 2018, the following agreements/approvals are requested in order to obtain the Construction Permit for the offshore project facilities:

- Water Basin Administration Dobrogea – Litoral – ABA-DL;
- Maritime Hydrographic Directorate - DHM;
- Romanian Naval Authority;
- Ministry of National Defense;
- Romanian Border Police;
- Ministry of Culture – Constanta County Directorate for Culture;
- Ministry of Foreign Affairs – MAE;
- Competent Authority for Offshore Oil Operations at the Black Sea – ACROPO.

As per Law no 256/2018, the final Construction Permits for the onshore and offshore components of the project will be issued by the Ministry of Energy.

4. Description of required demolition works

The project scope includes construction and installation of onshore, shore crossing and offshore infrastructure of Neptun Deep Project. No demolition works are planned to be performed during the construction and installation phase of the Neptun Deep infrastructure.

The execution of onshore infrastructure does not include any demolition works of existing infrastructure present within the project area (e.g., local roads, railway line, existing utilities, buildings, etc.).

Upon completion of the project construction and installation works, site restoration works will be carried out in areas impacted by the construction and installation works (details are provided in Section 3.6.6).

5. Description of the project location

5.1 Project Site Location

5.1.1 Onshore Site Location

The area proposed for construction/installation of the onshore facilities of the Neptun Deep project is located in the southern part of the administrative territory of Tuzla commune, Constanta County, close to the northern limit of the administrative territory of Costinești commune.

The onshore project site (represented by the private land owned by OMV Petrom S.A. with superficies rights for EMEPRL, respectively S1 site registered under cadastral number 109216, S3 site registered under cadastral number 109659, and S4 site registered under cadastral numbers 109729 and 100819) is situated between the east side of the National Road DN39 Constanta – Mangalia (from Constanta direction), km 23+190, and the local unpaved road De269 located along the sea front.

The surroundings of the onshore project site include:

- North: local road De 229/1 and private properties (parcel A259/89 cadastral number 108838 and parcel A259/91);
- East: local unpaved road De269, cliff, beach, and the Black Sea (at approximately 60 m);
- South: private property (parcel A289/3b), vegetal screen (cadastral number 109189), private properties (parcel A259/105, cadastral number 100794 and parcel A259/106, cadastral number 107526);
- West: private properties (parcel A289/1a, lot 2/1 cadastral number 109365 and lot 2/2 cadastral number 109364).

The Black Sea is located at approximately 60 m east of the eastern-most edge of the onshore project site.

Tuzla Airport is located to the northwest of the western limit of the onshore site at approximately 2 km distance.

Private dwellings were identified to the south and southeast of the onshore project site. The closest dwellings are located at approximately 100 m south from the limit of the site proposed for installation of the production pipeline and onshore entry point of the microtunnel shore crossing, respectively at approximately 350 m south-east from the limit of the site proposed for installation of NGMS, at the date of present document.

A private orchard is located in the vicinity of the western limit of the onshore project site.

Irrigation channel CDI-8 Biruinta, part of "Amenajarea 1340 Carasu – Biruinta" Facility, administrated by the ANIF – Constanta Branch is located to the north close to the project site.

The general onshore site location is shown in Appendix B.

5.1.2 Shore Crossing Site Location

The production pipeline and FOC shore crossing is planned as a bundle installation using the microtunneling method.

The onshore entry point of the microtunnel will be located within S4 site owned by OMV Petrom with superficies rights for EMEPRL, the Beneficiaries of the project. Local road De269 (cadastral number 109115), the cliff (cadastral number 110670) and the beach (cadastral number 106571) are located adjacent to the eastern

side of the onshore project site and will be undercrossed by the onshore section of underground shore crossing microtunnel.

The offshore exit point of the microtunnel will be located within the coastal waters of the Black Sea.

5.1.3 Offshore Site Location

The Neptun Deep field development area is located within the Neptun Deep block of the western Black Sea, outside of country territorial waters, in the Romanian Exclusive Economic Zone - EEZ. The offshore infrastructure crosses several different and unique physiographic provinces including a nearshore zone, the continental shelf, and the slope from the shelf to the basin. General offshore development location of the Neptun Deep Project is shown in Appendix B.

SWP is located on the continental shelf of the Black Sea approximately 160 km west of Tuzla locality, Constanta County in the Black Sea.

PSDC1 is located on the continental shelf of the Black Sea approximately 160 km west of Tuzla locality, at about 2 km northeast of the SWP in the Black Sea.

DODC1 and DODC2 are located on the slope from the shelf to the basin of the Black Sea approximately 175 km west of Tuzla locality, at about 24 km southeast of the SWP in the Black Sea.

5.2 Distance to borders

The nearest international border to the onshore project site is represented by Bulgarian territory border situated more than 25 km south of the southern-most edge of the onshore project site. Ukrainian Republic and Republic of Moldova' borders are located more than 100 km north of the onshore project area, at approximately 140 km (Ukraine) and 170 km (Republic of Moldova).

The production pipeline is approximately 160 km long on a west-east direction between the shore and the SWP location on the continental shelf. The pipeline is generally running in parallel with the southern limit of Romania's EEZ that borders northern part of Bulgaria's EEZ. The distance between the production pipeline and EEZ limit varies between 25 km near the shore and 46 km near the SWP location.

The SWP is located at approximately 46 km north from the south limit of Romania's EEZ (bordering the Bulgaria's EEZ) in the Black Sea.

PSDC1 is located at approximately 47 km north from the south limit of Romania's EEZ and DODC1 and DODC2 are located at approximately 35 km north from the south limit of Romania's EEZ (bordering the Bulgaria's EEZ) in the Black Sea.

5.3 Location of the site in relation with the cultural patrimony

5.3.1 Onshore

The onshore project site (S1, S3, and S4 sites, as defined above in Section 5.1.1) was investigated for presence of potential archaeological sites during the archaeological surveys performed in 2018, as part of the procedure for preparation and approval of the Archaeological Diagnostic Report for the project *"Establishment of natural gas metering station and control center, construction of access road and underground natural gas pipeline"*.

According to the findings of the Archaeological Diagnostic Report prepared by the Museum of National History and Archaeology from Constanta (MINAC) and approved by Ministry of Culture – Constanta County Cultural Direction, the studied area is located within an area with low archaeological potential, without conclusive archaeological trace.

The closest archaeological objective is represented by Costinescu Mound located at approximately 500 m distance to the north-west corner of the onshore project site.

According to the available public data (e.g., National Archaeological Record of Romania – RAN, <https://map.cimec.ro/Mapserver/>), a total of 7 archaeological sites and 31 mounds (cairns) were identified within a 5 km radius of the onshore project area. A summary description of the seven archaeological sites is shown below:

- Roman settlement of Tuzla: this site lies northwest of the project area and is approximately 1 km south of Lake Techirghiol. This settlement dates back to the 3rd century and was erected during the Roman Era.
- Archaeological site of Tuzla 1: this site lies north east of the project area and is very close (approximately 50 m) from the Tuzla lighthouse on the coast. This site dates back to the 3rd century and was developed during the Roman-Byzantine era.
- Archaeological site of Tuzla 2: this Roman era settlement is located in between "Tuzla Mica" Bay and "Tuzla Mare" Bay.
- Archaeological site of Tuzla 3: this site is located west of the "Tuzla Mare" Bay, on the first peninsula on the south side. This site was built in the Roman era.
- Archaeological Site "Parthenopolis of Costinesti": this site lies near the coast in the eroded shore approximately 250 m north of the Fishery. The site dates back to the Roman era.
- Archaeological Site of Costinesti: the archaeological site of Costinesti is located north of the small promontory located between the sea and the lake. This site dates back to the Roman Era.
- Hellenistic Settlement of Costinesti: the Hellenistic settlement in Costinesti is 2 km northeast of the intersection of the Constanta - Mangalia National Road with the road to Costinesti. The site dates back to the Hellenistic era in the 4th century BC.

The onshore cultural heritage resources located within a radius of 25 km from project site are shown in Figure 7.

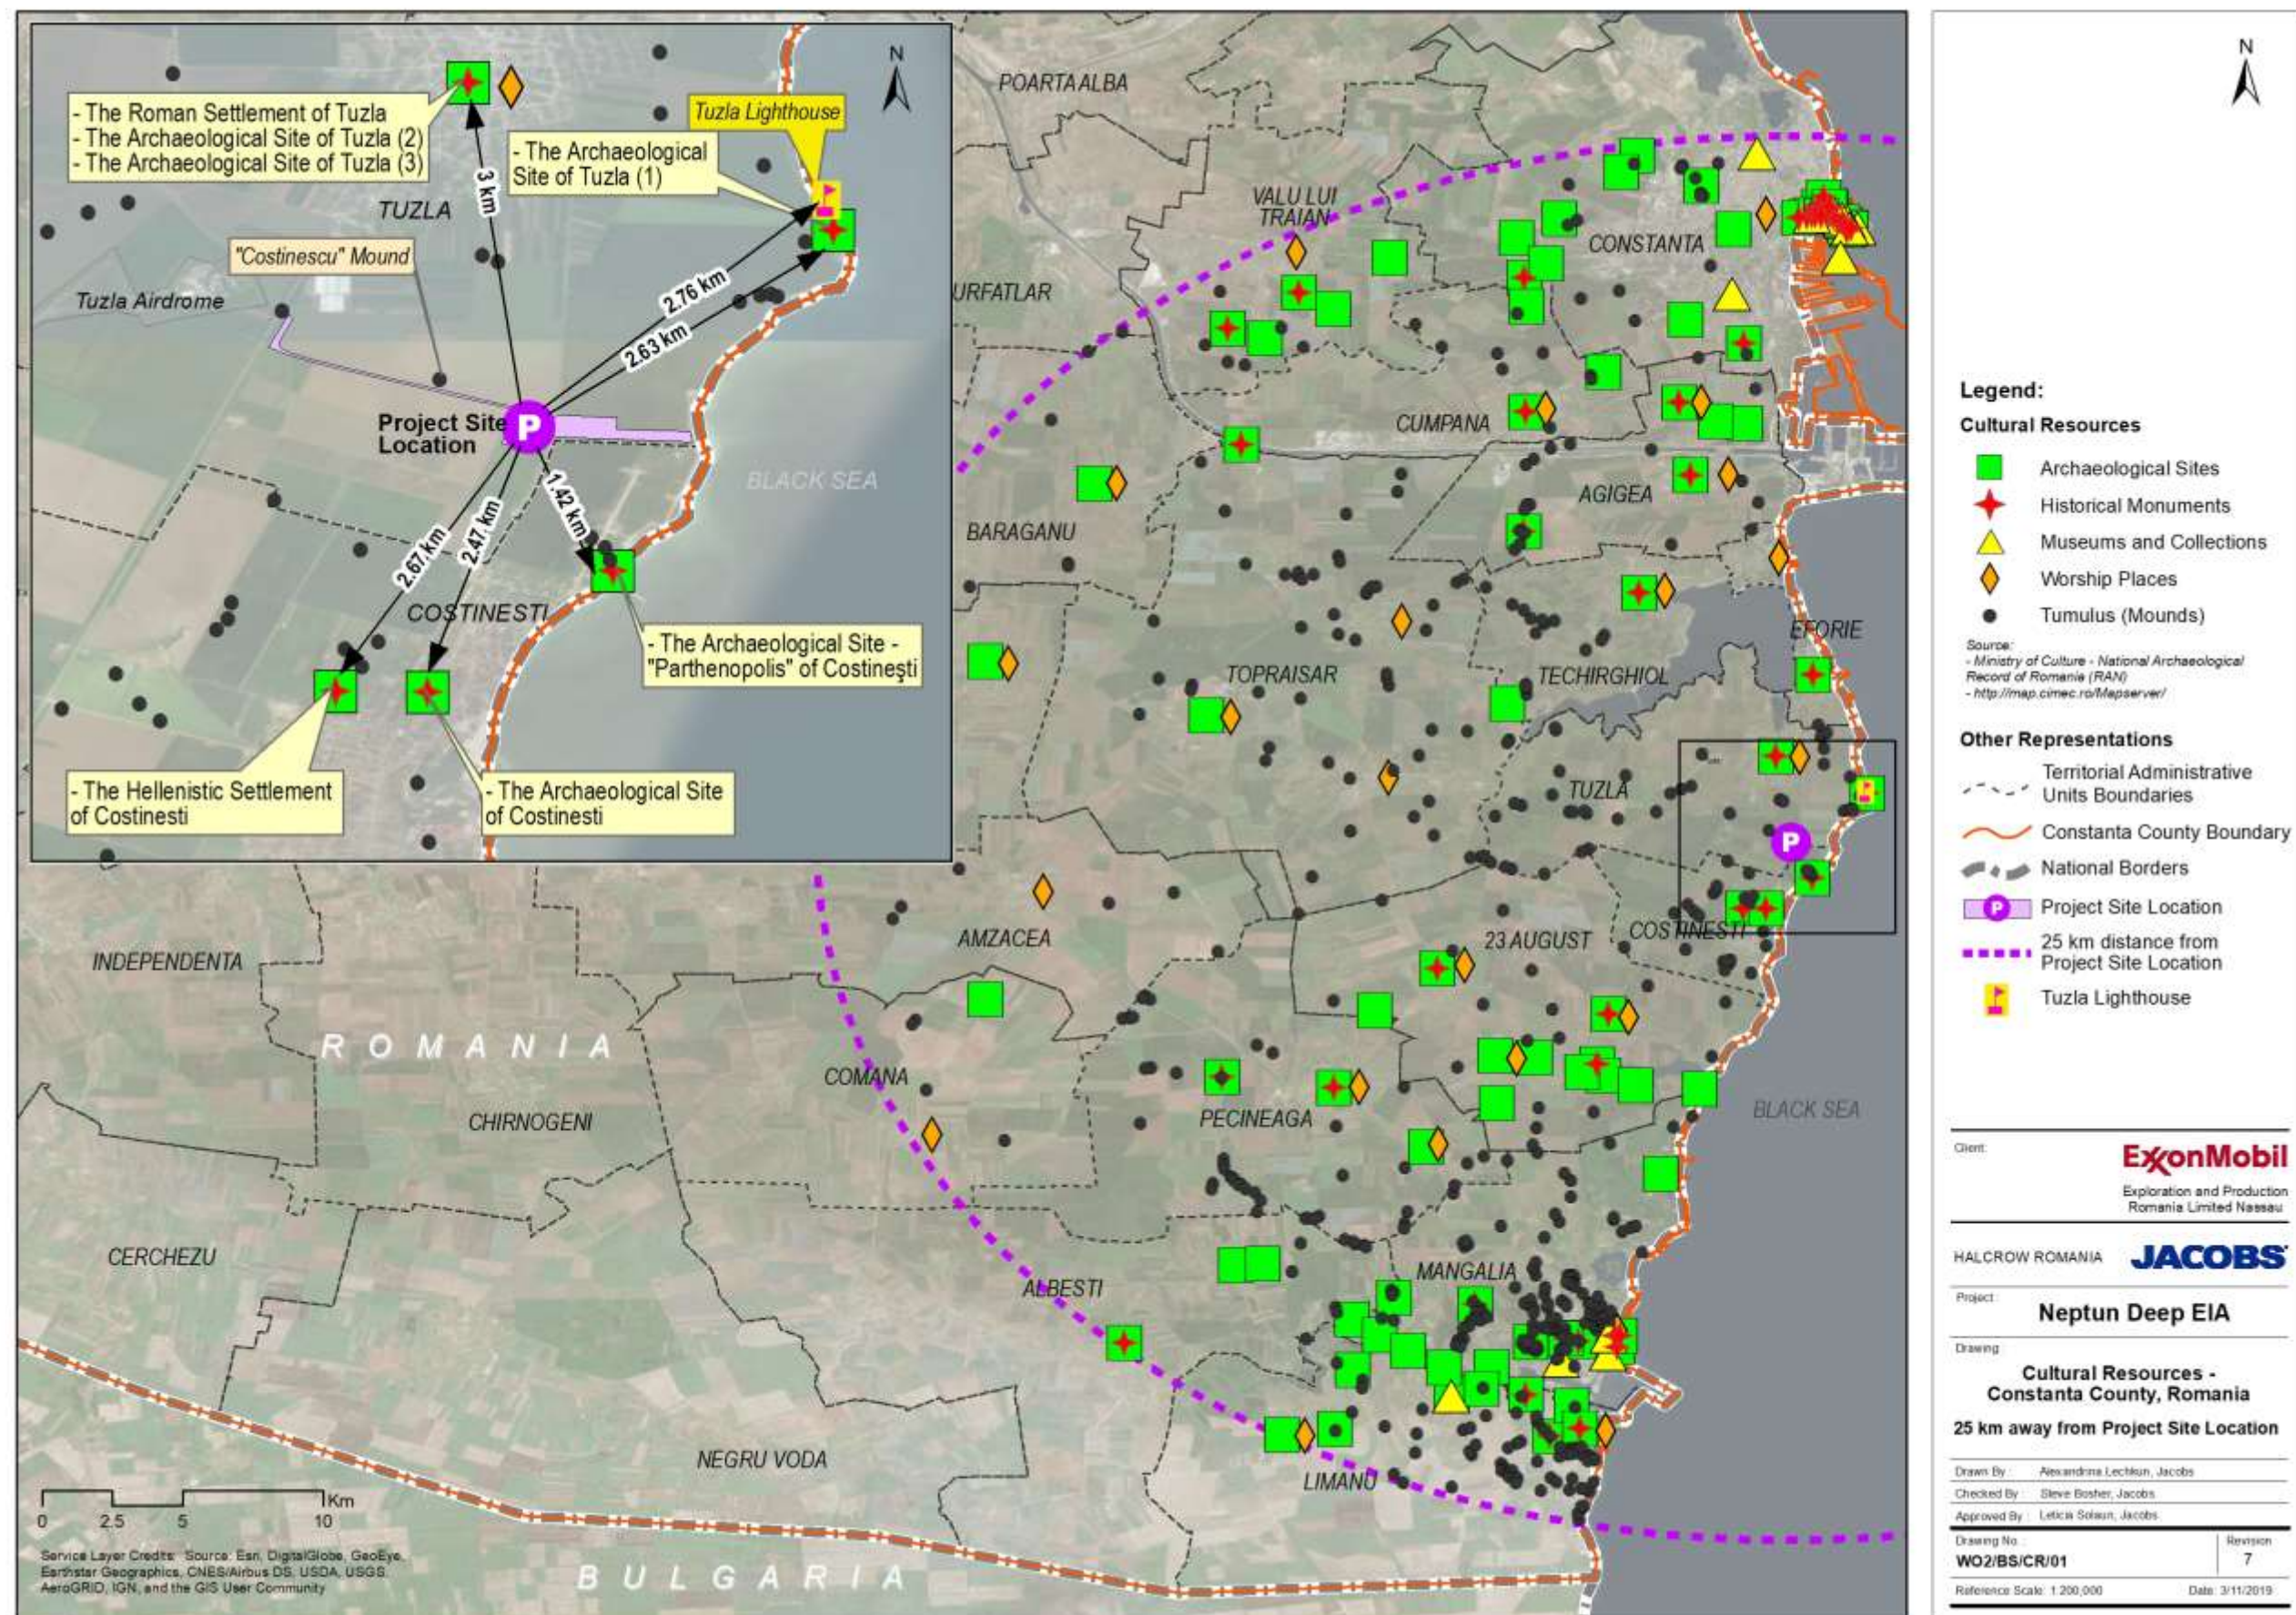

Figure 7 - Onshore cultural resources located within 25 km from project site

5.3.2 Offshore

The project site is partially located within the archaeological protection area of the Romanian shelf of the Black Sea coast (CT-l-s-A-02561 "*Platforma continentală a litoralului românesc al Mării Negre*").

An offshore area of approximately 385 km² located within the project site has been subject to geophysical desktop and field surveys conducted during 2013, 2014, and 2017 by Fugro Oceansismica. The geophysical data were acquired using non-intrusive methods of acoustic investigation (Side Scan Sonar, Sub-bottom Profiler and Multibeam EchoSounder).

Further on, a Geophysical Interpretation Report focused on potential identified archaeological targets, including maps and images with the possible targets, was prepared based on the geophysical data acquired during 2013 – 2017. The report was prepared in 2020 by the National Research and Development Institute for Marine Geology and Geo-Ecology – GeoEcoMar.

The geophysical interpretation was focused on assessment of side scan data, together with sub-bottom and multibeam data, to locate, identify and map possible archaeological features on the seabed. After analyzing all the geophysical data acquired for the entire perimeter of 385 km², the identified targets were classified into 4 main categories, as described below:

- Archaeological target - Features which are clearly identified to be archaeological;
- Geological target - Features which are clearly identified to be of geological nature;
- Anthropogenic target - Features which are clearly identified to be of modern anthropogenic origin (e.g., dredging, sampling, industrial debris, etc.);
- Undefined target - Features where it is unclear what they are and could potentially be any of the other 3 categories presented above.

The position of all investigated locations and the coordinates of all possible archaeological findings were included into a Global Information System - GIS map.

The results of geophysical interpretation report were assessed by archeologists of MINAC for selection of possible archaeological targets to be further investigated/documentated using underwater noninvasive archaeological investigations (underwater photos and video footage). A number of 21 identified possible archaeological features located at water depths between 8 m and 116 m were further investigated using noninvasive investigation methods (e.g., divers, remotely operated underwater vehicles). The noninvasive underwater archaeological surveys were conducted during October 2020 – March 2021 under direct supervision of MINAC archeologists.

The findings of the noninvasive underwater investigations were assessed by the MINAC archeologists, as part of the procedure for preparation of a final Archaeological Diagnostic Report.

The non-intrusive archaeological diagnostic identified a number of four wooden wrecks that present a certain historical and archaeological potential and require a protection area of 50 m, as defined by article 8 of Law no. 256/2018.

Other four targets located at deep depths that could not be technically visualized during these investigations have been provided with a protected area similarly to the one provided for the four identified wooden wrecks (50 m protection area), upon completion of new investigations for confirmation or negation of artifacts presence. The distance between the protection area limit of these targets and gas pipeline varies from 63 m to 225 m.

The final Archaeological Diagnostic Report prepared by MINAC archeologists (that recommend the endorsement of the project) was approved by the National Archaeological Commission.

5.4 Current and planned land uses of the site and adjacent areas

The onshore project site (S1, S3, and S4 sites, as defined in Section 5.1.1) is located to the south of Tuzla commune administrative territory close to the northern border of Costinesti commune administrative territory. Currently, the project site has agricultural land use with no presence of any buildings on site. No industrial activities are present within or in the closest proximity of onshore project site.

From west to east, the onshore project site is crossed by the communal road DC4, railway line Constanta – Mangalia, local road De277, and local road De259/4.

The local road De269, the cliff and the beach are located to the east of onshore project site and will be undercrossed by the onshore section of underground shore crossing microtunnel. According to the provisions of the approved General Urbanism Plan (PUG) of Tuzla commune, the beach area located to the east of onshore project site is currently located within built-up area with green areas and has recreational functional zoning.

Air transportation activities are currently performed within Tuzla private airport area that is located approximately 2 km north – west of the western-most edge of the onshore project site.

Private dwellings and touristic guesthouses were identified to the south and southeast of the onshore project site on the administrative territory of Costinesti commune. According to the provisions of the approved PUG of Costinesti commune, a built up ("*intravilan*") area located adjacent to the south of the onshore project site, on the administrative territory of Costinesti commune, is proposed for touristic development (villas, guesthouses).

The private land owned by OMV Petrom S.A. with superficies rights for EMEPRL (S1, S3, and S4 sites) is represented by a cropland that was not cultivated in the last years since acquired by the Project Beneficiaries.

The site owned by the Project Beneficiaries is surrounded by land used for intensive forms of agriculture. The existing activities in the proximity of the site are mainly agricultural, including cereal crops and fruit farming (a private orchard is located close to the west of onshore project site).

According to CLC (CORINE Land Cover classification) 2018, most of the agricultural lands in the studied area are covered by the "*Non-irrigated arable land*" class, followed by "*Vineyards*", "*Fruit trees and berry plantations*", "*Pastures*" and "*Complex cultivation patterns*".

The agricultural lands from the southern part of Tuzla Administrative Territorial Units (ATU) and the northern limit of Costinesti ATU are represented by "*Non-irrigated arable land*" (4,043.04 ha for Tuzla and 1,496.49 ha for Costinesti) and "*Fruit trees and berry plantations*" (109.88 ha for Tuzla and 9.02 ha for Costinesti).

Figure 8 presents the type of land use in the project area according to CLC 2018. The project site area is characterized by predominantly agricultural lands with only small areas of spontaneous vegetation.

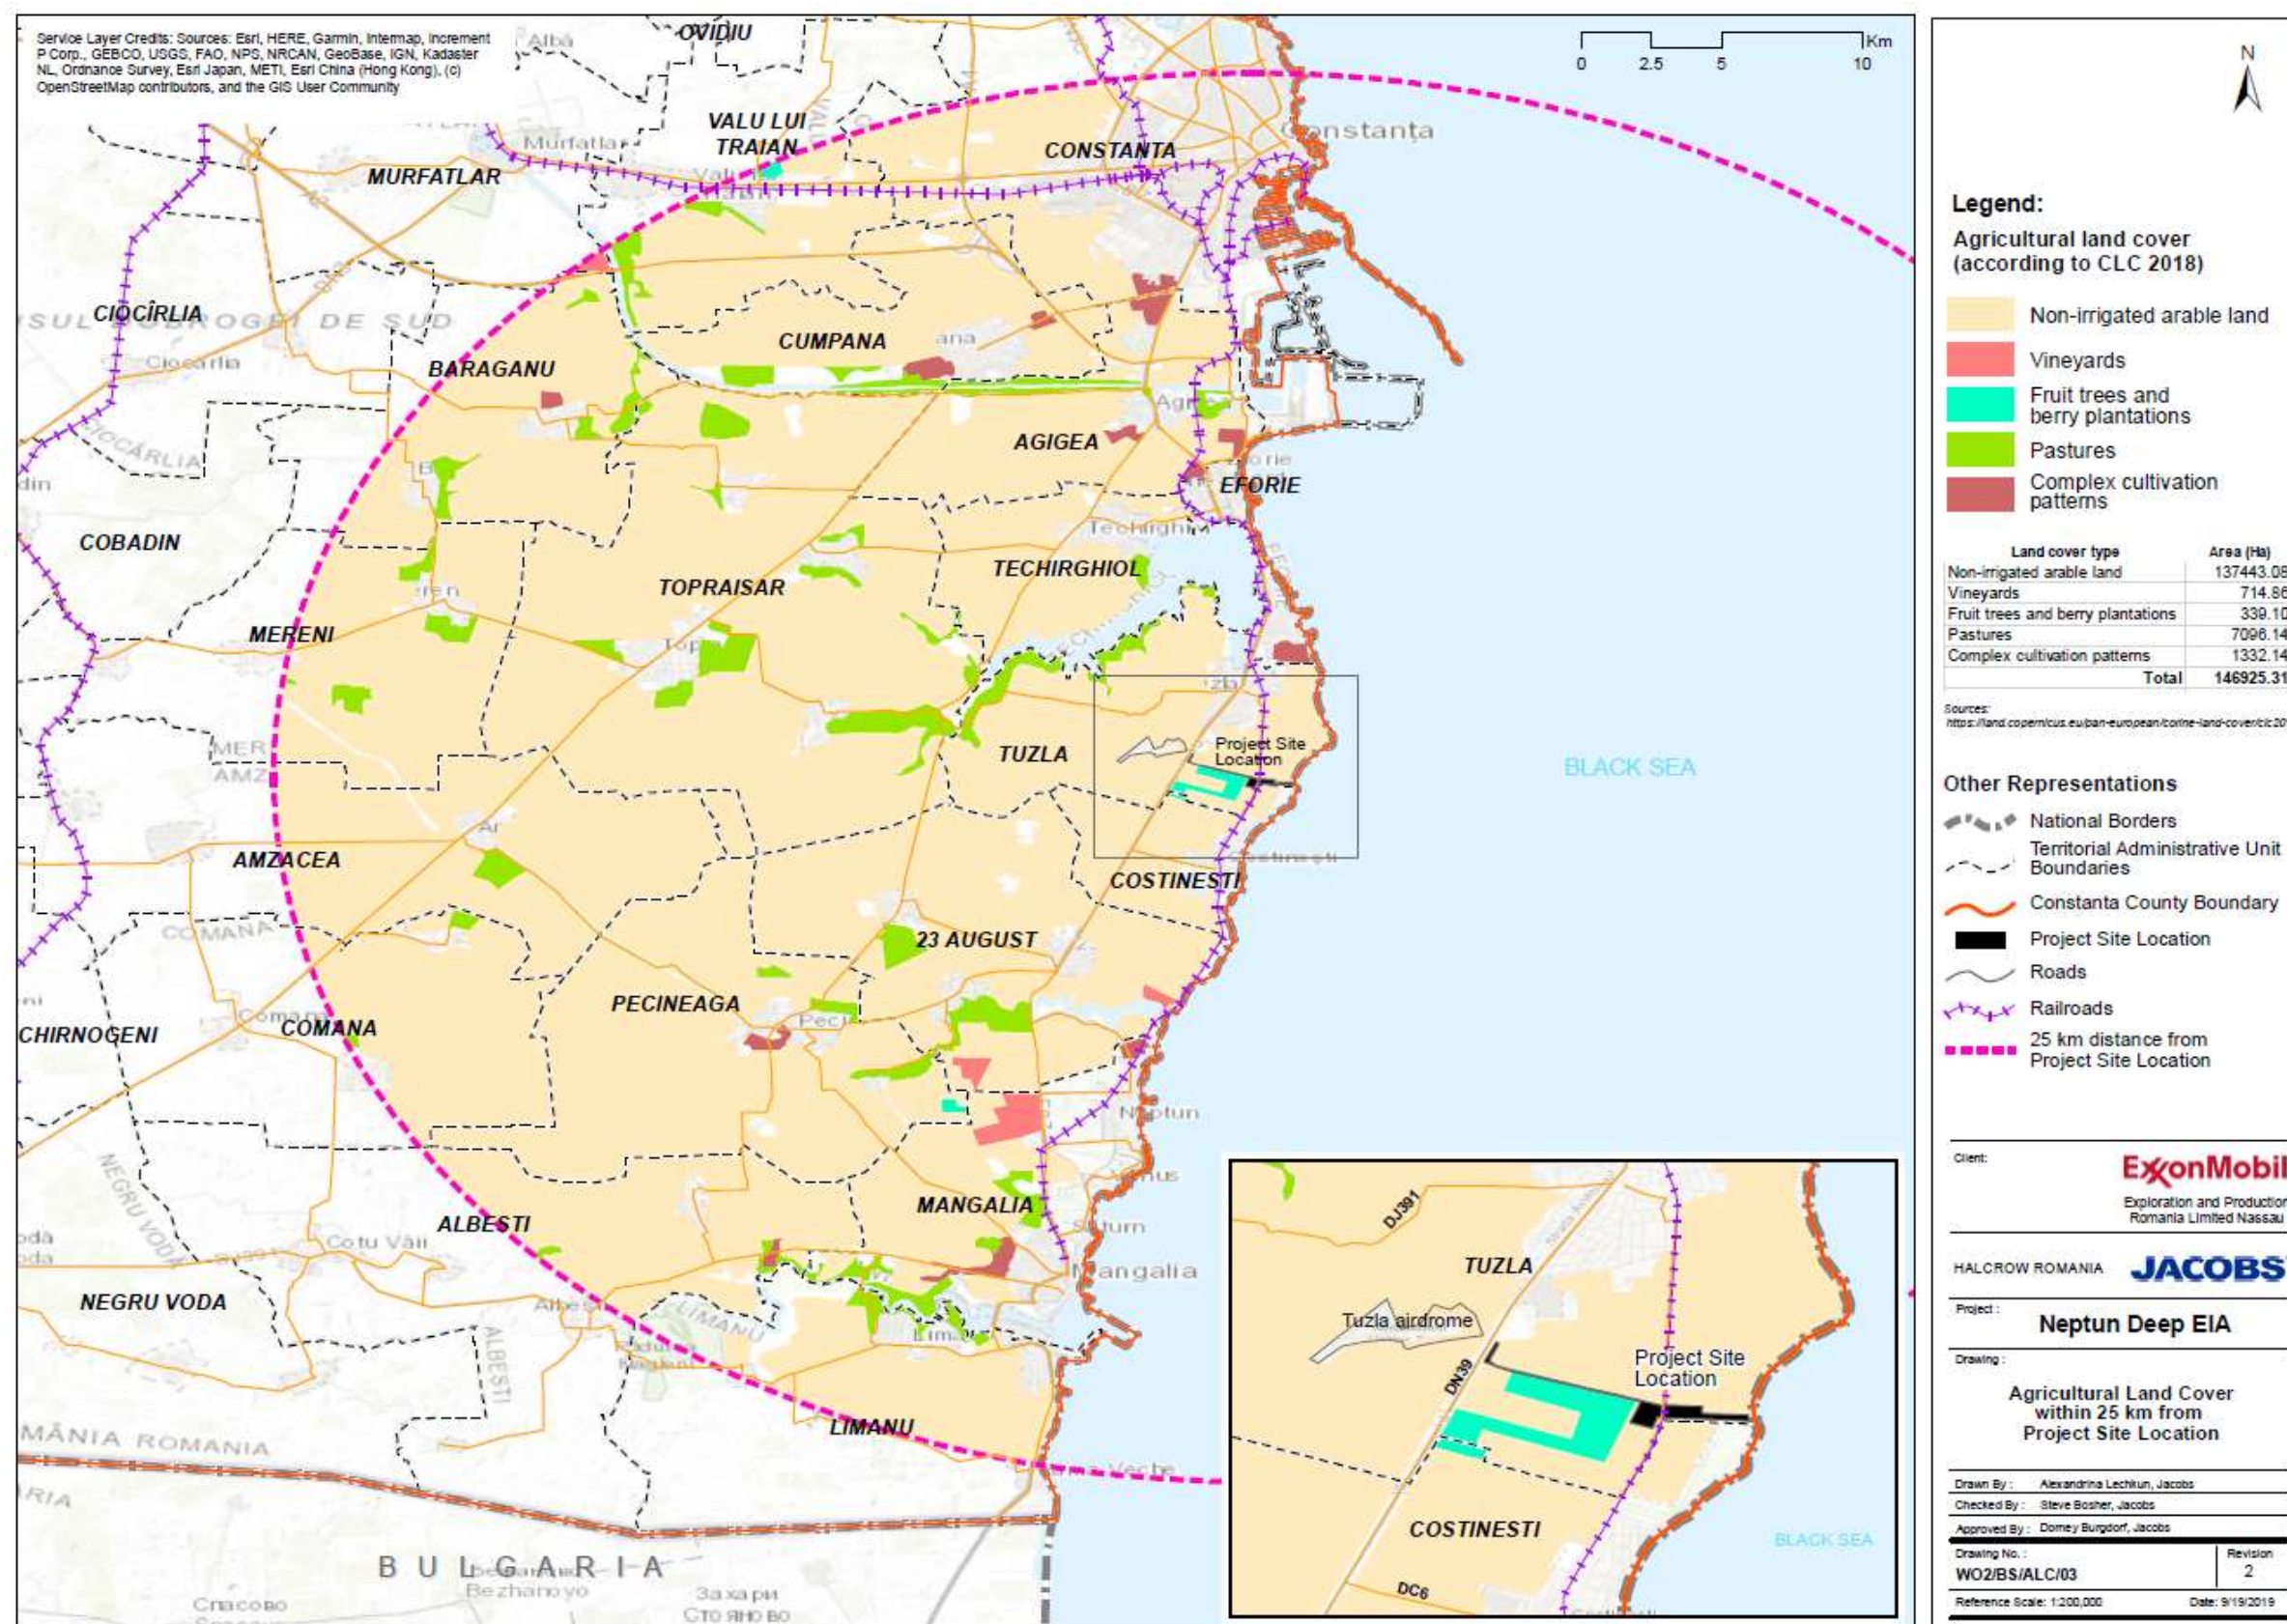

Figure 8 - Onshore project area land use (CLC 2018)

Source: Neptun Deep Project, Natural Resources Summary Report, 2019

The Black Sea is located approximately 60 m east of the eastern-most edge of the onshore project site. The existing activities within the offshore area include mainly marine shipping and fishing activities. Other oil & gas exploration and production perimeters are identified within the Romanian portion of the Black Sea. The proposed offshore development is part of XIX Neptun block.

Land Occupancy

The entire onshore area impacted by the construction/installation works of the onshore facilities and shore crossing microtunnel described in this presentation memorandum is represented by private and public property, and has a total surface of **232,876 m²**, from which:

- **223,184 m²**: private property of OMV Petrom S.A. with superficies rights for EMEPRL, corresponding to **S1 site – cadastral number 109216 (85,000 m²)**, **S3 site – cadastral number 109659 (70,880 m²)** and **S4 site – cadastral numbers 109729 and 100819 (67,304 m²)**;
- **657 m²**: public property of Tuzla City Hall - communal road DC 4;
- **4,408 m²**: public property administrated by the Ministry of Transportation and leasehold held by the National Railway Company "CFR" S.A. – railway line Constanta – Mangalia (cadastral number 109182);
- **898 m²**: public property of Tuzla City Hall – local road De 277;
- **571 m²**: public property of Tuzla City Hall – local road De 259/4;
- **494 m²**: public property of Tuzla City Hall – local road De 269 (cadastral number 109115);
- **1,484 m²**: private property of Tuzla City Hall (cadastral number 110670);
- **1,180 m²**: public property of Romanian State administrated by National Administration "Apele Romane" through Water Basin Administration Dobrogea – Litoral (cadastral number 106571).

The surfaces occupied by the onshore and offshore project facilities are summarized below.

The onshore main permanent facilities (NGMS, CCR and other related facilities installed at the NGMS and CCR sites) will occupy a total surface of approximately **15,200 m²**.

An underground area of **2,117 m²** will be occupied by the onshore section of GPP and FOC from NGMS to onshore entry point of shore crossing microtunnel.

The green areas (perimeter trees screen, shrubs green fence, and areas covered by grass) installed at the onshore project site will occupy a total surface of approximately 20ha.

A total surface area of **62,000 m²** will be temporarily impacted by the onshore construction works sites and other temporary works, from which:

- **1,030 m²** will be occupied by the temporary railway crossing, including connections to local roads;
- **16,523 m²** will be occupied by the pipeline corridor installation area;
- **539 m²** will be occupied by the natural gas pipeline undercrossing of railway and local roads;
- **9,770 m²** will be occupied by the NGMS and CCR related Construction Works Site Organization (including administrative containers, parking area, precommissioning pad);

- 5,850 m² will be occupied by the microtunneling related construction works site, including launch shaft area;
- 18,339 m² will be occupied by the stringing yard, including welding area;
- 450 m² will be occupied by the pipe storage area; and
- 9,499 m² will be occupied by the temporary access roads to the microtunneling construction site.

The area occupied by the shore crossing microtunnel is of **2,136 m²** from which:

- 678 m² in the onshore area;
- 1,458 m² in the nearshore area.

The underwater area that will be occupied by the offshore facilities (SWP, Domino and Pelican South Drilling Centers, flowlines, umbilicals, production pipeline, offshore landfall, and other related facilities) is **813,607 m²**, from which:

- 3,547 m² represents the area occupied by the SWP;
- 8,686 m² represents the area occupied by DODC1 and related subsea equipment (manifold, trees, etc.);
- 8,722 m² represents the area occupied by DODC2 and related subsea equipment (manifold, trees, etc.);
- 11,088 m² represents the area occupied by PSDC1 and related subsea equipment (manifold, trees, etc.);
- 73,260 m² represents the area occupied by Domino flowline;
- 2,952 m² represents the area occupied by Pelican South flowline;
- 2,952 m² represents the area occupied by SWP - PSDC1 umbilical;
- 52,280 m² represents the area occupied by SWP – DODC1 umbilical;
- 12,040 m² represents the area occupied by DODC1 – DODC2 umbilical; and
- 638,080 m² represents the area occupied by the offshore section of 30-inch (762 mm) GPP and FOC.

5.5 Zoning and land use policies

For the onshore component of the Neptun Deep project, was obtained the Urbanism Certificate no 85 from 29.04.2021 issued by Constanta County Council.

For the onshore component, the Beneficiaries have developed the PUZ – Zonal Urbanism Plan for Construction of the NGMS, Control Center, Access Road and Underground Pipe Laying for Natural Gaz Transport, for which it has obtained Decision no 100 dated 16th of November 2020 issued by the Tuzla City Hall Local Council.

According to the PUZ documentation prepared in support of the final decision for PUZ approval, the requirements/provisions of the following urbanism plans and other plans/programs applicable to the project area were assessed and considered:

- National Sustainable Development Strategy Romania 2013-2020-2030;
- Integrated Urban Development Strategy of Constanta Metropolitan Area;
- Assessment and Risk Covering Plan of Tuzla commune, 2017;
- Constanta County Urbanism Plan;
- General Urbanism Plan of Tuzla commune;
- General Urbanism Plan of Costinesti commune.

PUZ documentation considered all provisions related to area characteristics, construction safety, protection of public interest, maximum permitted height, green spaces, and fencing stipulated by the General Urbanism Plan of Tuzla commune. The functional zoning established by PUZ includes technical – urbanistic equipment (*"echipamente tehnico-edilitare"*), roads (*"cai de comunicatie rutiera"*) and green spaces (*"spatii plantate"*).

Following approval of PUZ documentation by the Tuzla City Hall, the private land owned by OMV Petrom with superficies rights for EMEPRL registered under cadastral number 109216 (S1 site, total surface of 85,000 m²) that is proposed for construction/installation of the onshore NGMS, CCR, and other related facilities included at the NGMS and CCR sites has been included within the limit of built-up area (in Romanian *"intravilan"*) of Tuzla commune.

The other private lands owned by OMV Petrom with superficies rights for EMEPRL, respectively S3 site (cadastral number 109659, total surface 70,880 m²) and S4 site (cadastral numbers 109729 and 100819, total surface 67,304 m²) are located outside the limit of built-up area (in Romanian *"extravilan"*) of Tuzla commune.

According to the current PUG regulations of Tuzla commune, the entire area between the railway line Constanta – Mangalia and the cliff, that also includes S3 and S4 sites, is proposed for potential development of built-up area (*"intravilan"*) with residential and touristic functional zoning. This area will be undercrossed by the underground onshore section of gas production pipeline and fiber optic cable, and an onshore section of the underground shore crossing microtunnel. The block valve station will be also installed within this area, to the east side of the railway line. No other permanent surface buildings/facilities are planned to be installed within the area between the railway line and the cliff.

The installation of natural gas pipelines within this area will not impact the potential future development plan of locality concerning expansion of built-up area (*"intravilan"*) due to the fact that the pipelines can be installed both on built-up areas (*"intravilan"*) and outside of built-up areas (*"extravilan"*).

The onshore gas production pipeline has been designed and will be installed in accordance with the provisions of Technical Norm for design and execution of the upstream gas pipelines approved by the Decision no 1220/2006 issued by ANRGN (presently ANRE). In accordance with the provisions of this Technical Norms, protection and safety zones must be implemented for the onshore pipeline and related installations (e.g., NGMS), including:

- A minimum protection zone of 6 m width on each side of the pipeline measured starting from the pipeline axis) where no construction works are allowed to be executed;
- A safety zone of 20 m width on each side of the pipeline measured starting from the pipeline axis where construction interdictions will be implemented (e.g., housing, office spaces, etc.).
- A safety zone of 200 m width on each side of the pipeline measured starting from the pipeline axis where a written endorsement issued by the pipeline operator must be obtained as part of the construction permit procedure for approval of any new construction within this zone.

Details on protection and safety zones, and related construction interdictions were presented in Section 3.6.2.2.1.

All permanent onshore buildings and equipment will comply with the maximum 12 m height limit stipulated by the Zonal Urbanism Plan in force.

5.6 Location of the project towards sensitive areas

5.6.1 Localization of the project towards the protected natural areas of national interest

This project will be developed on two types of ecosystems – maritime (Black Sea) and terrestrial (Constanța County).

The project onshore facilities are not located inside the limits of any natural protected areas (including special protection area – SPA, site of community importance – SCI, natural protected areas, RAMSAR sites, Important Birds Area – IBA) designated at international, community and/or national level.

The closest Natura 2000 protected areas to the onshore project site (S1, S3, and S4 sites owned by the Project Beneficiaries) are represented by ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla, located at approximately 60 m east of the eastern-most edge of the onshore project site. The closest part of the project towards the Natura 2000 sites is the land plot corridor where the underground pipeline will be executed. Other Natura 2000 sites are located at more than 3 km from the onshore part of the project.

The closest Natura 2000 protected areas to the offshore project site are represented by:

- Natura 2000 site ROSPA0076 Marea Neagră is crossed by the Gas Production Pipeline (GPP) and FOC on a length of approximately 2.5 km;
- Natura 2000 site ROSCI 0273 Zona marină de la Capul Tuzla is under-crossed to its south-western corner by the GPP and FOC shore crossing section on a length of approximately 600 m.

The location of the site in relation to the natural protected areas of community interest is presented in Section 12.

The natural protected areas located in the area of the onshore project site (S1, S3, and S4 sites owned by the Project Beneficiaries) are represented by the following:

- RONPA0937 Techirghiol Lake Natural reserve located at approximately 5 km distance of the north-western corner of the onshore project site.

5.6.2 Location of the project towards wetlands - Ramsar sites

Romania has adhered to the Convention on wetlands of international importance, especially as a Ramsar aquatic bird habitat, since 1991. 19 Ramsar sites have been declared throughout Romania.

In the Ramsar Convention, wetlands have been defined as stretches of ponds, marshes, natural or artificial waters, permanent or temporary, where the water is drifting or flowing, sweet or salty, including stretches of sea water whose depth at reflux does not exceed 6 m.

By signing the Ramsar Convention, Romania has undertaken to designate the wetlands on its territory to be included in the list of wetlands of international importance.

The closest Ramsar site to the onshore project site (S1, S3, and S4 sites owned by the Project Beneficiaries) is represented by Techirghiol Lake RAMSAR site, code 1610, located at approximately 4 km distance of the north-western corner of the onshore project site.

5.7 Geographic coordinates of the project site

The Stereo 70 coordinates of the entire onshore project site area impacted by the construction/installation works of the onshore facilities and shore crossing microtunnel described in this presentation memorandum are listed in Table 20.

Table 20 – Onshore Project Site Area Stereo 70 Coordinates

Site Name	Cadastral number	Total Surface (m ²)	Stereo 70 Coordinates		
			No.	North(X) m	East(Y) m
S1 – future location of NGMS, CCR and other related facilities	109216	85,000	56	281679.306	792,252.519

The coordinates of main onshore, shore crossing and offshore permanent project facilities were presented above in Section 3.6.2.

The coordinates of the onshore construction works sites and other onshore temporary facilities are presented in Section 10.2.

The general onshore, shore crossing and offshore site location is shown in Appendix B.

5.8 Details of any considered alternative for site location

Onshore Alternatives

The onshore project site has been selected following an assessment of various site alternatives considered for construction/installation of onshore NGMS and CCR sites. The criteria used for assessment of site alternatives included:

- Environmental criteria (e.g., site location, current site conditions, proximity to residential areas and natural protected areas, potential historical pollution, etc.) and potential impact generated by project construction and operation on environment and adjacent natural protected areas;
- Socio-economic criteria, such as: current development of the area, land use (agricultural or barren), access to the site, proximity to the transportation infrastructure);
- Design criteria - complexity of technical solutions required to be implemented upon each potential site limitations/restrictions;
- Construction criteria – potential difficulties in execution due to the complexity of technical solutions required to be implemented on site, including the potential of using the latest shore crossing technologies (e.g., microtunneling);
- Operational criteria - facilitate operations and maintenance works.

A number of 4 potential sites located along the Black Sea coast from north to south were considered within assessment of the site alternatives, including:

- Site alternative no 1 – site located within the area of Cap Midia;
- Site alternative no 2 – site located within the administrative area of 23 August locality;
- Site alternative no 3 (the current onshore project site) – site located within the administrative area of Tuzla locality;
- Site alternative no 4 – site located within the administrative area of 2 Mai locality.

The current development concept (offshore subsea equipment, offshore SWP and onshore NGMS connected by a gas production pipeline from offshore to shore) and process flow (natural gas production through the Pelican South and Domino drilling centers, delivery of produced gas to the SWP facilities via separate flowlines from drilling centers, gas separation at the SWP, transportation of the processed natural gas from the SWP to the onshore NGMS site via gas production pipeline and delivery of sales gas to the Romanian NTS) have been considered applicable to all studied alternatives.

A summary of the main findings of the onshore site alternatives assessment is shown in the Table 21.

Table 21 – Onshore site alternatives

Site Alternative	Main Findings
Site alternative no 1: Cap Midia	<p>The site is located within the Midia industrial area (Petromidia oil refinery, terminal). The site area has an intensive industrial use and may have potential presence of historical pollution.</p> <p>A military base ("<i>Unitatea Militara nr. 08153 Capu Midia – Tabara de Instructie si Poligon de Trageri Sol – Aer</i>") is present within the area. The potential risk of crossing the military base and field of fire has been considered.</p> <p>The site is located in the proximity of a natural protected area – Rezervatia Biosferei Delta Dunarii (UNESCO natural protected area). Due to the presence of this protected area and other limitations (e.g. potential historical pollution on site, presence of military base in the area), this site alternative site has been rejected.</p>
Site alternative no 2: 23 August	<p>The site is located within the administrative area of 23 August locality, close to the Black Sea front (located to the East of site). The land use is mainly agricultural.</p> <p>The railway line CF 800 Constanta - Mangalia is located within the site proximity (250 m away from the sea front).</p> <p>The site presents calcareous cavernous geological conditions.</p> <p>The sea front wall is exposed to natural erosion processes with no consolidation/stabilization works.</p> <p>The execution of onshore facilities (including pipeline corridor and shore crossing) can be impacted by the local soil and subsoil conditions and sea front erosion.</p> <p>The geotechnical investigations performed on site revealed the presence of a calcareous rock layer impacted by an intensive karstification process due to the presence of Black Sea waters. This represents a safety construction risk that should be avoided, as per current safety construction guidelines.</p> <p>The execution of shore crossing works may activate landslide processes in the sea front area (not terraced).</p> <p>Due to the above-mentioned construction safety constraints, this site alternative has been rejected.</p>
Site alternative no 3: Tuzla	<p>This site has currently mainly agricultural use and is located within the limits of Tuzla commune administrative area. The site is located between the National Road DN39 (located at approximately 1.8 km to the west of site limit) and Black Sea coast (located at approximately 60 m to the east of site limit). The site area is crossed by the railway line Constanta – Mangalia and local roads (e.g., communal road DC4).</p> <p>The site can be currently accessed by using the existing communal or local roads that are connected to the National Road DN39.</p> <p>Tuzla Airport is located to the northwest of the western limit of the site at approximately 2 km distance.</p> <p>The site has a mainly flat topography, with the highest elevation recorded on the western part of the site and slope inclination decreasing towards the east.</p> <p>No existent surface water body has been identified within the site limits. The Black Sea located at approximately 60 m distance from the eastern limit of the site.</p>

Site Alternative	Main Findings
	<p>No onshore archaeological sites were identified within the site limits, as per archaeological investigations performed onsite.</p> <p>The site is not located inside the limits of any natural protected areas (SPA, SCI, natural protected area, RAMSAR Wetland site, IBA) designated at international, community and/or national level. The closest natural protected areas are represented by ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla, located at approximately 60 m east of the east-most edge of the site.</p> <p>This site represents the final location selected for the implementation of the onshore and shore crossing works. The site has been selected as the best site alternative regarding environmental (including natural protected areas, sea front and beach) protection, and safety of construction and operation.</p> <p>The soil and subsoil conditions of the selected site are more favorable for execution of the pipeline corridor and shore crossing in comparison to the other assessed alternatives.</p> <p>In terms of shore crossing, the assessment indicated that the construction of a shore crossing in this area would be less challenging compared to other studied site alternatives taking into consideration the following aspects:</p> <ul style="list-style-type: none"> • Local geological conditions (structure of soil/subsoil is more feasible for construction). • Current land development status (agricultural, limited urban development); • Existing corridor between environmental protected areas which allows the installation of the pipeline as close as possible to the shoreline without impacting protected habitats and species; • No impact on archaeological sites; • Easy access to the Romanian NTS operated by Transgaz; •
Site alternative no 4: 2 Mai	<p>The site area is located between 2 Mai and Vama Veche localities. Natural protected area ROSCI0269 "Rezervația Marină 2 Mai – Vama Veche" is located along the Black Sea coast. The construction/installation works (e.g., shore crossing) should be performed within the natural protected area limits. The biodiversity and habitats present inside the natural protected area may be potentially significantly impacted by the works as undercrossing the protected area in its entire length is not possible</p> <p>No existing access roads were identified within the investigated area.</p> <p>Due to the above-mentioned constraints, no further investigations were performed for this site and this alternative has been rejected.</p>

Following assessment of site alternatives based on the above-mentioned criteria, **the Site alternative no 3 (current project onshore site located in Tuzla)** has been selected as the best site alternative for construction and installation of onshore facilities and microtunnelling shore crossing.

Offshore site

The offshore SWP will be located on the continental shelf approximately 160 km offshore east of Constanta, in the area of the Pelican reservoir. The platform location was selected in order to minimize the potential of encountering shallow gas hazards. Five other alternative options for platform location were assessed during the selection of best location for platform installation. Three of those potential locations were used at one point as the basis of the platform location. The proposed location of the platform was selected as the location where shallow gas was least likely to be found. Other factors considered for selection of the platform location included:

- Proximity to the drill centers;
- Clearance distance from drilling rig mooring pattern; and
- Clearance from other geohazards.

An evaluation has been conducted to assess the drilling shallow hazards and supported the selection of proposed locations of the Domino and Pelican South drill centers. The locations of drill center were selected in order to minimize drilling shallow hazards while minimizing methanol requirements for longer jumpers and engineering rework.

The route of the production pipeline has been determined based on the findings of the pipeline routing study conducted by a third-party contractor in order to determine the appropriate route for installation of the production pipeline and to provide a basis for pipeline design. The routing study included assessment of the following input data:

- Route survey data: geophysical (bathymetry and seafloor features) and geotechnical surveys;
- Pipeline data;
- SWP tie-in details;
- NGMS tie-in details;
- Third party activities (existing or anticipated cable crossings, fishing areas, shipping infrastructure, sensitive and protected areas, and other constraints like wrecks, debris, trawl scars, etc.).

The general criteria applied to all pipeline routing studies (e.g. minimization of the route length and the number of intersection points, avoid where possible restricted offshore area such as shipping lanes, military areas, dumping areas, mining activities, etc., taking into consideration the requirements of third parties such as fishing organizations, avoid where possible pipelines, cables and utilities crossings, and other general criteria) were considered in the selection of the pipeline route. The full route of the proposed production pipeline from offshore SWP to onshore NGMS is shown in the alignment sheets attached to this document (Appendix C).

Similarly, the routes of the flowlines and umbilicals have been determined based on the findings of specific flowlines and umbilicals routing studies conducted by third-party contractor. The routing study included assessment of the route survey data (e.g., geophysical survey), flowlines and umbilicals data, gas field details, SWP and manifolds tie-in details.

The proposed routes of Domino and Pelican South flowlines and umbilicals are shown in the alignment sheets attached to this document (Appendix C).

6. Description of the significant possible effects of the project on the environment

6.1 Sources of pollutants and installations for the retainment, evacuation, and dispersion of pollutants in the environment

6.1.1 Water quality protection

6.1.1.1 Existing situation

Groundwater

The onshore project site is characterized by the general structure of Dobrogea where the groundwater is mainly found in a pressurized aquifer system located in the limestone deposits. The karstic aquifers are the main supply of water for the entire region.

According to the literature review, the following aquifers have been identified within the onshore area of interest:

- The upper (shallow) aquifer represented by the following groundwater bodies:
 - *RODL10 Dobrogea de Sud* is an unconfined aquifer of Holocene and Mid – Upper Pleistocene age, porous – permeable type, with the covering strata in some locations varying from the surface to 0.50 mbgl (meters below ground level);
 - *RODL04 Cobadin – Mangalia* is an artesian, karstic aquifer of Sarmatian age, developed in hard rocks, predominantly limestone; this represents a transboundary groundwater body, and the thickness of the cover strata varies between surface and 20.00 mbgl.
- The lower (deep) aquifer represented by *RODL06 Platforma Valaha*. This groundwater body is a karstic deep aquifer, artesian, captured in Barremian – Jurassic deposits; this represents a transboundary aquifer with a significant economic importance; the thickness of the cover strata is variable.

The location of onshore project site in relation with the identified aquifers is presented in Figure 9. More details on groundwater bodies present within the onshore project site, including quantitative and chemical status of the groundwater bodies, are presented in Section 13.

During the 2019 geotechnical investigation campaign performed within the onshore project site (S1, S3, and S4 sites owned by OMV Petrom with superficies rights for EMEPRL), local groundwater level was identified at depths below 30 mbgl at the future NGMS and CCR proposed location (site S1 – cadastral number 109216) and 20 mbgl along the proposed pipeline corridor area (S3 site – cadastral number 109659 and S4 site – cadastral numbers 109729 and 100819). The groundwater level identified corresponds to the Black Sea level in absolute elevation.

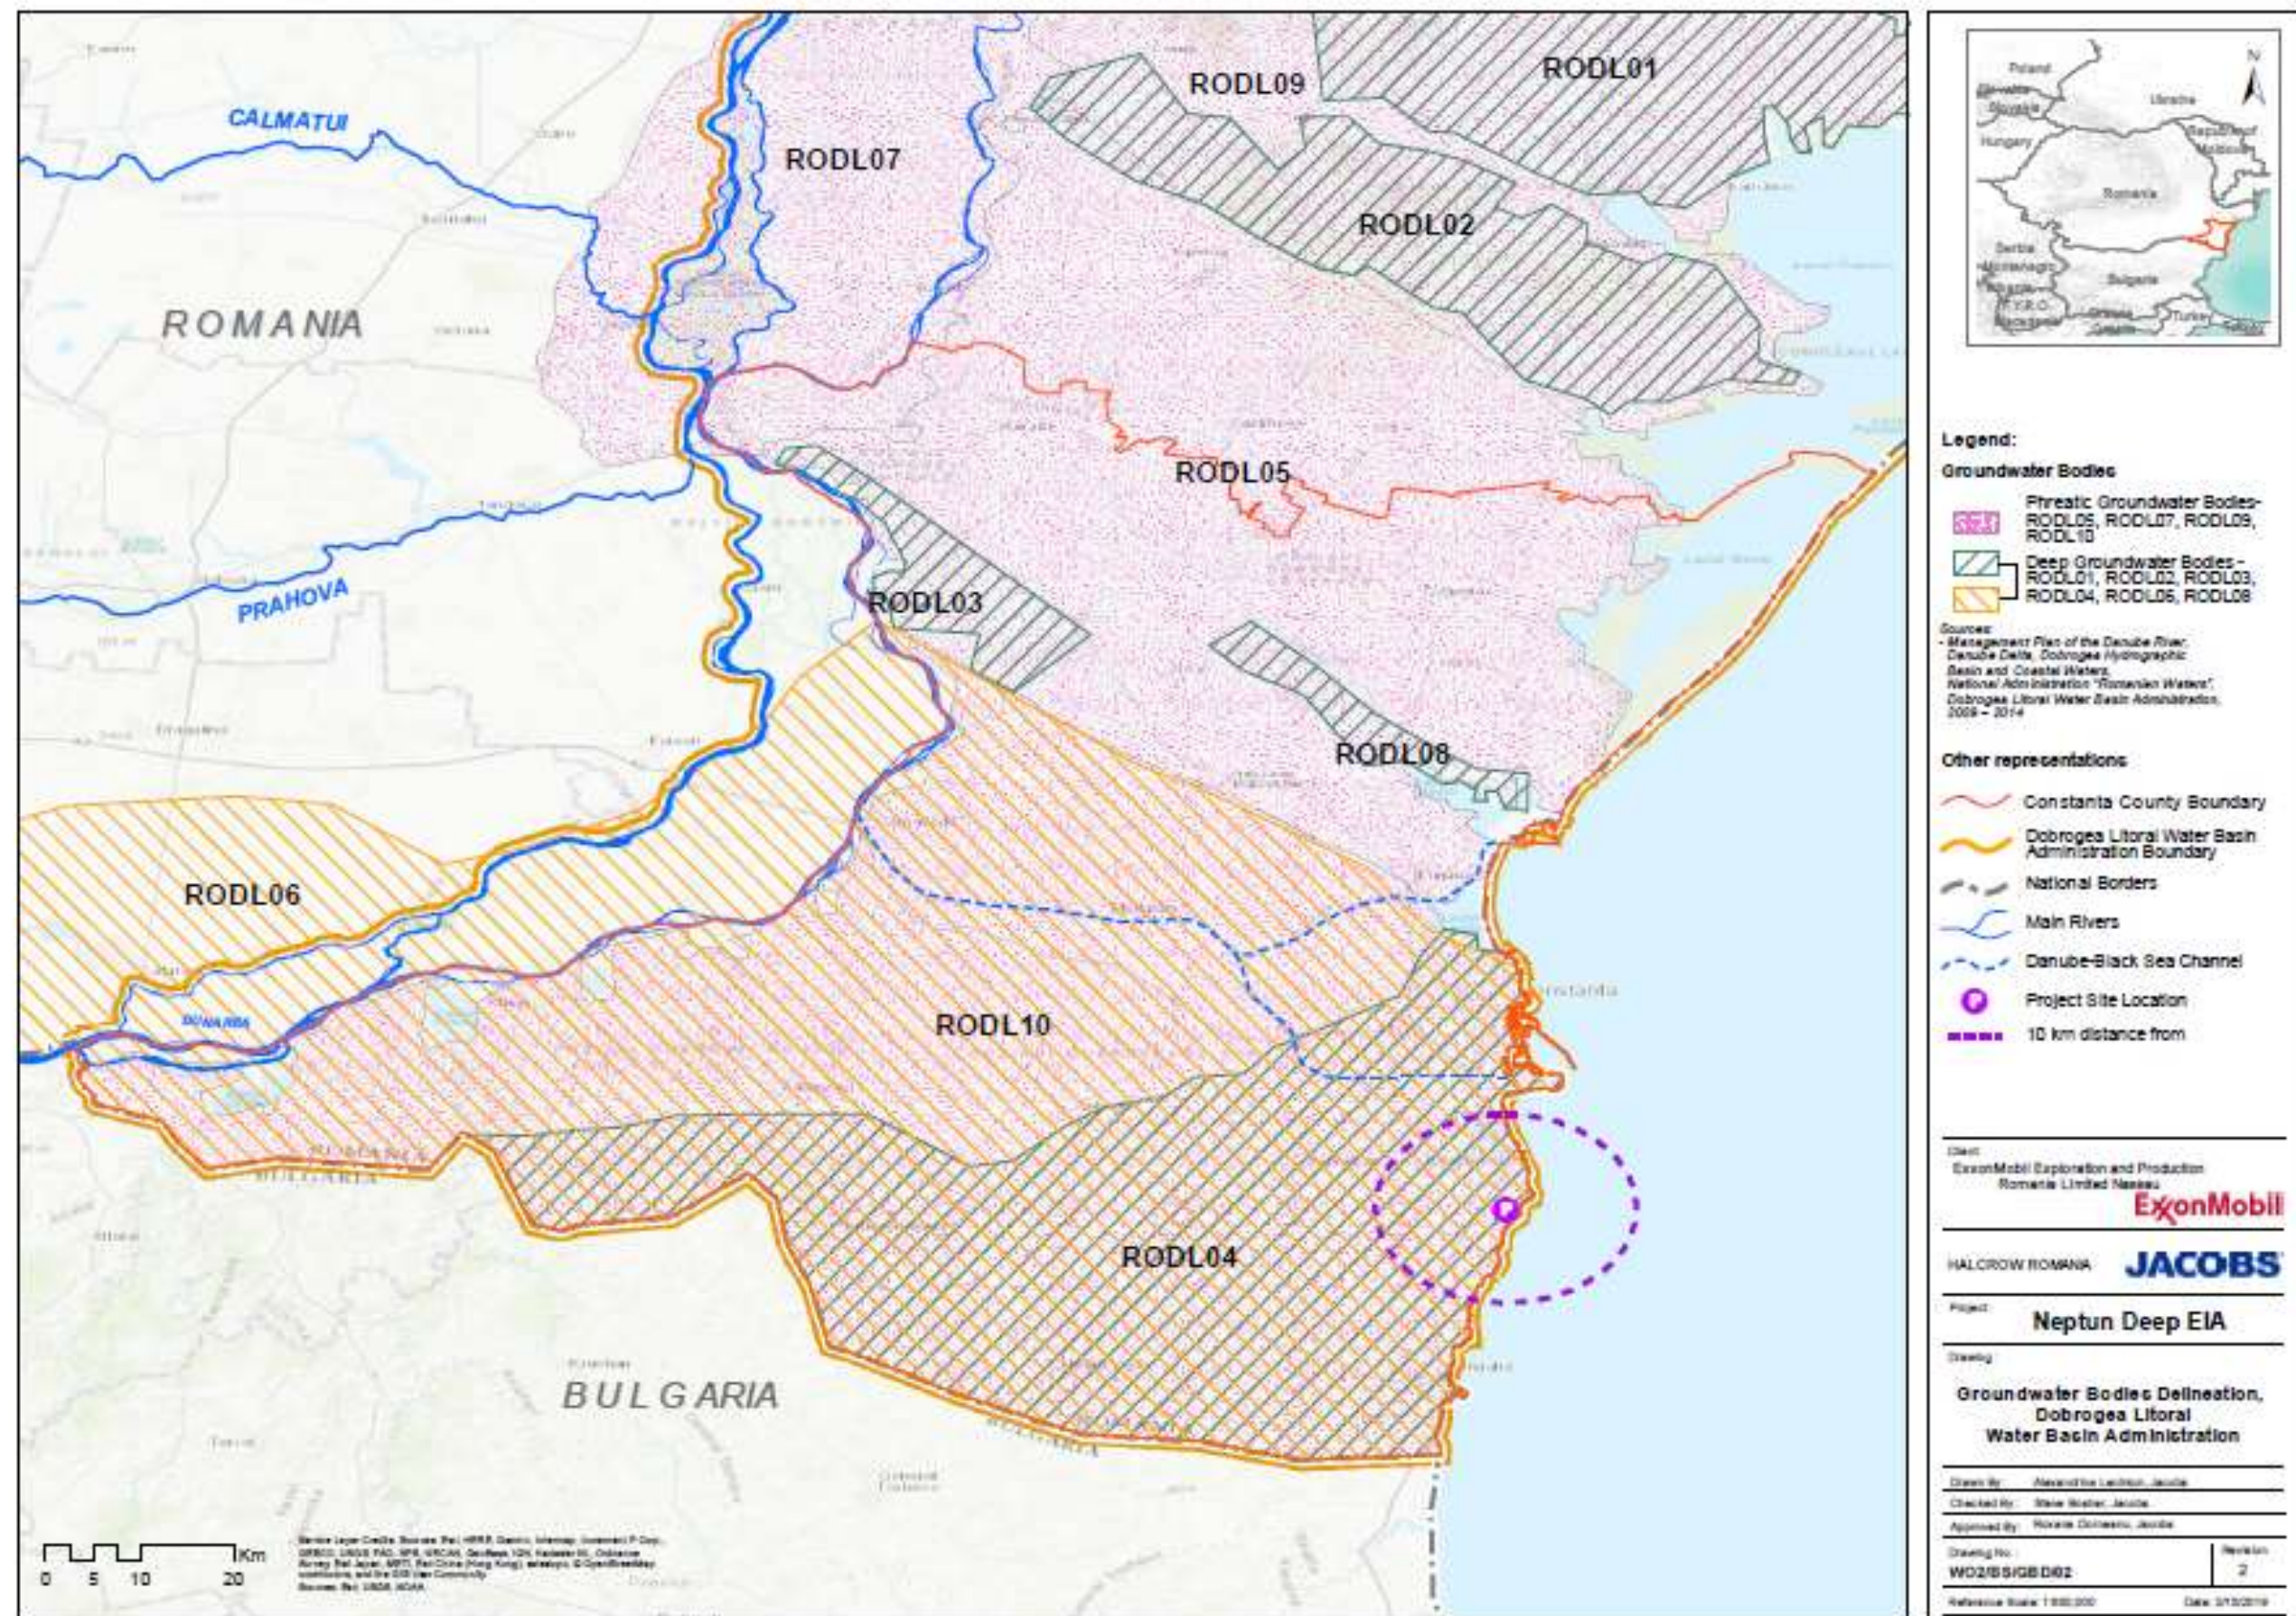

Figure 9 – Groundwater bodies identified within the onshore project site

Surface water

The onshore project site is located within the Dobrogea – Litoral Hydrographic Basin. No water courses have been identified within the onshore project site. The Black Sea is located at approximately 60 m east of the eastern-most edge of the onshore project site. Costinesti lake (a saltwater lake currently connected to the Black Sea) is located at approximately 3 km south – east of the onshore project site.

The closest onshore surface water course (rivers or streams) is represented by Tatlageagul Mare River (cadastral code XV_1.11b) that is located at more than 5 km distance to the south-west of the onshore project site. Other onshore surface water courses located within a radius of approximately 20 km within the project site are represented by:

- Dereaua River (cadastral code XV_1.11) located to the northwest of project site;
- Biruinta River (cadastral code XV_1.11a) located to the northwest of project site;
- Tatlageacul Mic River (cadastral code XV_1.11c) located to the southwest of the onshore project site; and
- Albesti River (cadastral code XV_1.12) located to the southwest of the onshore project site.

The location of onshore project site in relation with the closest onshore surface water courses (rivers or streams) is presented in Figure 21, Section 13.2. No surface water bodies were identified within the onshore project site (S1, S3, S4 sites owned by OMV Petrom with superficies rights for EMEPRL). The closest onshore surface water body is represented by Techirghiol Sarat Lake (water body code ROLW15.1_B2) located at approximately 4 km to the north of the onshore northern-most edge of the onshore project site. Other onshore surface water bodies located at more than 5 km from the onshore project site are represented by:

- Techirghiol Dulce Lake (code ROLW15.1_B1) located to the northwest of project site;
- Tatlageac Lake (code ROLW15.1_B9) located to the south of project site; and
- Mangalia (code ROCT01_B2) located to the south of project site.

The coastal section of the gas production pipeline and FOC route will partially intersect the coastal water body Eforie Nord -Vama Veche (water body code ROCT02_B2) located to the east of the onshore project site.

The location of project site in relation with the closest onshore and coastal water bodies is presented in Figure 22, Section 13.2.

Details on ecological and chemical status of the surface water bodies are presented in the Section 13.3 and the environmental objectives of the identified water bodies are presented in the Section 13.5.

The offshore section of the project is located within the Black Sea region. Water depth across the Neptun Deep block ranges from 700 – 1,100 m at the Domino field to 120 – 130 m on the shelf at the Pelican field and platform location. The basin slope separates the Domino and Pelican fields. Along the gas production pipeline route on the continental shelf, the water depth decreases from 120 m to between 10–15 m at the proposed trenchless shore crossing location.

Approximate water depth range for the main objectives of the offshore Neptun Deep development are:

- Shallow Water Platform: 120 –130 m;
- Pelican South Drill Center: 120–130 m;
- Domino Drill Center 1: 970–980 m;

- Domino Drill Center 2: 945–955 m.

6.1.1.2 Sources of pollutants for water, discharge point or emissary

The main potential sources of water pollution during **construction phase** include:

- Improper management of wastewater resulting from execution of onshore construction/installation works (e.g., domestic wastewater generated from administrative areas, produced water from microtunneling execution and hydrotesting, rainwater, etc.);
- Accidental fuel, oil, chemicals, and other liquids leakage from construction vehicles, equipment, and facilities during execution of construction/installation works;
- Improper management of waste, fuels, chemicals and used materials at onshore construction sites (NGMS construction site, microtunneling construction site, stringing yard, pipe storage area, etc.);
- Improper discharge of fluids and wastewater produced during drilling, construction/installation, precommissioning and commissioning phase (e.g., drilling, completion and start up fluids; pipelines hydrostatic test water, domestic wastewater and rainwater generated by the drilling platform and support vessels);
- Accidental fuel, oil, chemicals, or other materials leakages into the Black Sea during drilling, construction and installation of coastal and offshore facilities and transport of construction materials on the sea;
- Fuel and materials leakage following vessels accidents;
- Improper management of waste, fuels, chemicals and used materials onboard of drilling platform and offshore construction/installation vessels;
- Execution of shore crossing, near shore and offshore dredging and trenching works that generate temporary increase in suspended sediments levels or turbidity;
- Improper quality and use of material used for backfilling of nearshore and offshore excavations and trenches.

During operation, the main potential sources of water pollution may be the following:

- Wastewater resulted during operation of NGMS and CCR sites (e.g., domestic wastewater generated from CCR building, rainwater, etc.);
- Improper management of waste, fuels, and used materials at onshore NGMS and CCR sites;
- Fluids and waste water resulting during operation of offshore infrastructure (produced water, well restart fluids, subsea valve actuator fluids, platform drains water, domestic wastewater and rainwater generated by the operations and maintenance support vessels);
- Accidental fuel, oil, chemicals, waste, or other materials leakages into the Black Sea during operations and maintenance activities at the offshore infrastructure and from support vessels;
- Fuel and materials leakage following support vessels accidents.

The onshore and offshore wastewater sources and related discharge points are summarized below.

6.1.1.2.1 Onshore Wastewater Streams

Wastewater streams will result from multiple sources during onshore project construction/installation and operation, as summarized below.

Construction and Installation Phase

The main wastewater streams during construction/installation phase include:

- Domestic wastewater generated from NGMS and microtunneling construction works sites related offices and crew administrative areas (containers) will be collected on site by wastewater storage tanks that will be periodically emptied by trucks. The wastewater will be further transported and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors;
- Wastewater generated from washing truck facility that will be installed within the proposed access road area before connection with the National Road DN 39. *The washing trucks facility is not part of the project scope described in this technical memorandum and will be subject to a separate permitting procedure.* The wastewater will be periodically emptied by trucks, transported, and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors;
- Produced water resulting from shaft construction, tunneling process (drilling fluid system and cleaning), pipeline construction/installation (hydrotest line pipe); and
- Displaced tunnel water (sea water) resulting from tunnel backfilling.

Operation Phase

The main wastewater streams during operation phase include:

- Domestic wastewater generated from CCR building facilities will be collected on site by an underground septic tank of approximately 20 m³ volume that will be periodically emptied by vacuum trucks. The wastewater will be further transported and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors;
- Rainwater that drains through concrete areas inside the CCR fenced site will be collected by a rainwater drainage tank installed on a total surface of approximately 25 m². The tank will be periodically emptied by vacuum trucks for transport and disposal at an authorized wastewater treatment facility.

6.1.1.2.2 Offshore Wastewater Streams

Wastewater produced during project life (construction, precommissioning, commissioning, production, decommissioning) will result from multiple sources, as summarized below.

Construction and Installation/Precommissioning/Commissioning Phase

The main wastewater streams during construction/installation/pre-commissioning/commissioning phase include:

- Construction wastewater discharge (hydrostatic test water);
- Well drilling and start-up water discharges;
- Wastewater (graywater, blackwater) and rainwater generated by the construction/installation support vessels.

Hydrostatic Test Water

The production flowlines connecting the subsea wellheads and manifolds at the Domino and Pelican South DCs to the SWP will undergo hydrostatic testing before commissioning to ensure that the system can hold line pressure above the maximum allowable operating pressure rating. Similarly, the natural gas pipeline extending from the onshore NGMS to the SWP will undergo similar hydrostatic testing.

The hydrostatic test water will be withdrawn from Black Sea waters, filtered, and treated with preservation chemicals to inhibit damage to the flow lines.

Upon completion of the pressure tests, the hydrostatic test water is planned to be discharged into the Black Sea at the DODC2 location that will be situated deep in the Black Sea anoxic waters at a depth of over 950 m. This is a one-time event and the volume of water is significant and is not feasible to be brought onshore for treatment. Discharge into the Black Sea is the only feasible option, and the discharge will be done in the anoxic layer.

Drilling, Completion and Well Start Up Water Discharges

During drilling, water-based drilling fluids will be used during the first two sections of the wells when drilling as is done riserless. Once the riserless sections are drilled and the riser installed, NAF based drilling fluids (that contain an oily base) will be used until the well reaches total depth. Formation (rock) cuttings and NAF will be circulated. NAF returns to the drilling platform where is separated from the cuttings and stored temporarily on the drilling rig prior to being shipped onshore for treatment/disposal at an authorized waste facility. The cuttings will be captured for transport by barge to a shore-based waste handling facility following proper waste management processes for treatment and disposal. Water based drilling fluids are discharged instead directly on the seafloor from the well surface hole (volume cannot be captured because there is no riser connected to bring fluid and cuttings back to surface).

Upon drilling completion, the well will be filled with a clean inhibited brine to serve as a well completion fluid for protection of the well until start of production. Fresh water mixed with sodium bromide (NaBr) will be used to create the brine well completion fluid. All the completion fluids and methanol used during well start-up will go into the flowline along with any produced water and any residual drilling fluids in the formation but will not be displaced to the SWP until a sufficient gas flowrate is established to push the fluid up the flowline and riser. This process will repeat for each new well. The well start-up effluent is currently planned to be shipped by barges to a shore-based authorized wastewater treatment facility.

Well start-up effluent will go to the SWP together with production effluent. This effluent will not be discharged to the sea. It will be collected at the SWP and transported to shore.

Wastewater generated by drilling platform and support vessels

Wastewater (e.g., graywater, blackwater, rainwater, etc.) generated by the drilling platform and support vessels will be collected onboard, managed, and discharged following the appropriate maritime regulations (e.g., MARPOL (International Convention for the Prevention of Pollution from Ships) Convention; Black Sea Convention) regarding disposal of wastewater).

Rainwater falling into operational areas will be collected and discharged into the sea only if it will comply with the maximum 15 ppm concentration of hydrocarbons according to MARPOL regulation. If the concentration of hydrocarbons exceeds 15 ppm the water will be transported onshore for treatment/ disposal to an authorized facility.

Rainwater falling outside operational areas of the drilling rig will be discharged directly into the sea.

Bilge water from the drilling rig and support vessels will be transported onshore for treatment/ disposal to an authorized facility.

Operation Phase

The main wastewater streams during operation phase include:

- Produced water and well restart fluids;
- Subsea Valve Actuator Fluid Discharge;
- Rainwater/wash down water generated on the SWP;
- Wastewater (graywater, blackwater) and rainwater generated by the operations and maintenance support vessels.

Produced Water and Well Restart Wastewater Stream

Produced formation water (produced water) will be the largest volume of operations-related wastewater and is currently anticipated to be discharged from the SWP at 60 m water depth.

The produced water stream is a constant discharge that will consist of the reservoir water separated at the SWP from the gas production plus the residual chemicals added to preserve facilities and aid processing, and small amounts of fine- to very-fine sand.

Neptun Deep system may be shut in and restarted several times per year. Some restarts would be cold start-ups where methanol is injected to prevent hydrate formation. Methanol used for restarts will mix with the full production well stream and be discharged with the produced water.

Subsea Valve Actuator Fluid Discharge

Subsea valves on the wellheads utilize the pressure of a control fluid to actuate those valves. The pressurized control fluid is supplied from the SWP via the umbilicals.

An extremely small quantity of an aqueous ethylene glycol solution will be released in the marine environment when closing the valves on the well trees. The release of small amounts of water-based control fluid to operate subsea valves is a common practice in the oil & gas industry around the world.

Rainwater/wash down water generated on the SWP

Precipitation and fresh water used during maintenance wash down are two sources of water that are anticipated at the SWP.

Precipitation that falls on open deck grating and stairs will not be collected and pass directly to the sea surface.

Fresh water used on the SWP will be supplied by maintenance support vessels (e.g., boats and / or barges) for use with safety showers and platform wash down. As this water will fall on open deck grating and stairs, it too will not be collected and pass directly to the sea surface.

Precipitation that falls onto decked areas around the SWP equipment will be captured and diverted into the open drain system. Similarly, any wash down water that falls into decked areas will likewise be captured and diverted into the open drain system.

Maintenance chemicals will not be routinely injected in the open drain system; however, every 5 years or as needed, the open drain system including storage tank will be flushed with a biocide. During this cleaning activity, all fluids captured in the open drain system will be pumped to storage tank(s) on the maintenance vessel for proper onshore disposal at an approved wastewater management facility.

There is a potential that lube oil or other process chemicals could be captured in the open drain water system from minor leaks around equipment or if a chemical or fuel release occurs.

All open drain water will be diverted to a storage tank located in one of the steel legs of the SWP. The tank is provided with an oil and water separator and an analyzer which allows the discharge of the water fraction unless it exceeds the maximum 15 ppm hydrocarbon limit. The oily fraction will be removed periodically by vessel and shipped to shore for treatment by certified/authorized contractors.

Wastewater generated by Operations & Maintenance Vessels

Wastewater (e.g., graywater, blackwater, rainwater, etc.) generated by the Operations & Maintenance vessels will be collected onboard, managed, and discharged following the appropriate maritime regulations (e.g., MARPOL Convention, Black Sea Convention) regarding disposal of wastewater.

Decommissioning Wastewater Management

Decommissioning will require just pigging the flowline twice with sea water without additional chemicals.

Wastewater (graywater, blackwater) and rainwater generated by the decommissioning support vessels will be managed following the appropriate maritime regulations regarding management and disposal of wastewater.

6.1.1.3 Wastewater treatment plants or pre-treatment plants

6.1.1.3.1 Onshore Facilities

No wastewater treatment or pre-treatment plants will be installed at the onshore construction works sites (NGMS and CCR construction site and microtunnel construction site).

The wastewater generated during construction/installation works will be discharged to the sea upon approval of discharge parameters by the authorities (e.g. excess water that is displaced by the pipeline installation into the tunnel, displaced tunnel sea water resulting from microtunnel backfilling, pipe line hydrotest fresh water) or collected on site (e.g., excess water from drilling fluid system and tunnel cleaning) by storage tanks that will be periodically emptied by trucks and wastewater transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors.

The domestic wastewater will be collected on site in 20 m³ septic tanks for each of the two construction sites. The septic tanks will be periodically emptied by trucks and wastewater transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors. No sewer connections to local utilities are planned.

Displaced tunnel water (sea water) resulting from tunnel backfilling will be buffered on site, tested, and drained to the Black Sea via FOC conduit, upon approval of discharge parameters by the authorities.

No connections to local wastewater sewerage network or wastewater treatment facilities are planned to be installed at the NGMS and CCR sites during operation phase. The NGMS is a normally unstaffed facility so this eliminates the need for onsite sewer systems. The CCR area will be provided with standalone domestic wastewater (septic) underground tank and a rainwater storage tank for collection of rainwater that falls through the concrete platform installed within CCR fenced site.

Domestic Wastewater Management Facilities

The CCR area will be provided with standalone domestic wastewater (septic) underground tank. A sewerage system made of polypropylene fireproof sewer pipes with nominal diameters between 40 mm and 110 mm will be installed for evacuation of domestic wastewater generated from CCR building. A slope of minimum 2% will be provided for horizontal sewer pipes. The sewer columns will be provided with primary ventilation pipes

for the evacuation of gases from the installation and for the contact with its atmosphere (external diameter De of 110 mm).

The sewer pipes under the floor and up to 3 m away from the building will be installed in protection channels, in accordance with NP 125-2010 Normative. The manhole is dry type with cleaning piece, in order to visualize the possible water losses.

The evacuation of domestic wastewater will be done by connecting to the wastewater (septic tank) of approximately 20 m³ volume. The wastewater tank basin will be of prefabricated type made from polyester armed with fiber glass. The tank will be placed on a concrete slab and will be anchored with straps according to its technical book.

The connection will be made through an external sewer network. The wastewater tank will be provided with a ventilation pipe.

The external sewerage networks will be made of PVC-KG® tube DN 160 mm pipes. The domestic sewerage networks were dimensioned according to STAS 1795-90. The domestic sewerage networks were provided with slopes to ensure a minimum self-cleaning speed of 0.7 m/s. The domestic sewerage networks will be made in accordance with provisions of STAS 3051-91. The domestic sewerage network directs the waters to a sealed drain.

The useful capacity of the wastewater tank has been dimensioned considering a draining interval of 30 days.

The underground septic tank will be periodically emptied by vacuum trucks based on specific agreements signed with certified contractors.

Rainwater Management Facilities

For collection of rainwater inside the CCR fenced site, a rainwater storage tank will be installed adjacent to the south-east corner of CCR site on a total surface of 25 m². The rainwater from the roofs of CCR building will be collected by lateral attic receivers and pipes and discharged to the ground and further directed by vertical systematization through drainage ditches to the rainwater storage basin.

The rainwater from the concrete platform surrounding CCR building will be collected by vertical systematization through drainage ditches and directed to the rainwater storage tank.

The rainwater drainage ditches system will be positioned on all sides of the CCR building. The drainage ditches will be constructed out of precast concrete gutters of 1,000 mm length, 160 mm width, and 265 mm height.

The concrete platform transversal slopes will be adapted to between 1% and 2.5% towards the drainage ditches and the longitudinal slope of the gutters will be 0.25%.

The rainwater collected by the drainage ditches system will be discharged into a concrete manhole of 1,000 mm DN. The rainwater collected by the concrete manhole will be discharged into a rainwater storage tank through a HDPE pipe of 200 mm nominal diameter.

The rainwater storage tank will be made of reinforced concrete class C25/30, having the following estimated dimensions:

- Depth: 3.20 m;
- Width: 4.50 m (4 m interior width);
- Length: 5.50 m (5 m interior length) ;
- Wall thickness: 25 cm.

The rainwater tank will have a total volume of 64 m³ (40 m³ useful volume) and will be provided with a reinforced concrete cover class C25/30, provided with a frame, and cast-iron access cover.

The rainwater tank was dimensioned as a cover for a calculation rain of maximum intensity 130 l/s/ha, with a duration of 10 minutes, with a frequency of 1/1 for zone 5 related to the map with the distribution of the zones for intensity / duration / frequency graphs, on based on the following standards and norms:

- STAS 9470-73 – Hydrotechnique - Maximum rainfalls – Intensities, Duration, Frequencies;
- SR 1846-2:2007/C91:2008 - External sewers. Design requirements. Part 2: Determination of rainwater flows;
- NP 133 / 2-2013 - Norm regarding the design, execution and operation of water supply and sewerage systems of localities. Part II. Local sewerage systems.

The rainwater tank will be periodically emptied by vacuum trucks and discharged to authorized wastewater management facilities, upon confirmation by testing of compliance to water quality discharge criteria, based on specific agreements signed with certified contractors.

6.1.1.3.2 Offshore Facilities

The wastewater generated by the drilling platform, construction and installation vessels, operations and maintenance vessels and other support vessels that will be used during project lifecycle will be collected and managed by the wastewater management facilities installed onboard of vessels and barged to the shore for further disposal at the authorized wastewater treatment plants or/discharged to the sea following the appropriate maritime regulations regarding disposal of wastewater.

The runoff rainwater collection system for the operating areas is fitted with an oil/water separator capable of retaining the possible hydrocarbons collected by the water.

The SWP will be provided with a produced water treatment system, a temporary well clean up filtering system, an open drain system, and a produced water disposal caisson, as summarized below. The SWP wastewater flow diagram is presented in Appendix D.

Produced Water Treatment System

The full well stream from the Domino and Pelican fields is separated at the SWP into produced gas and produced water via the inlet separator. The gas from Inlet separator flows to the dehydration units.

The liquid leaving the bottom of the Inlet Separator is passed to the produced water degassing drum where the residual gas which remains in the mixture of produced water, fines, and chemicals is removed via a low pressure (0.5 barg) flash separation. The flashed gas will be sent to an atmospheric vent and the remaining produced water effluent will be discharged from the platform to the Black Sea at 60 m depth via a disposal caisson.

The produced water degassing drum consists of a horizontal two-phase gas – liquid separator provided with internals. The internals will include inlet vane diffuser device, mist eliminator at gas outlet, water outlet Vortex breaker, and sand jetting internals.

Note that there is no hydrocarbon liquids content present in the liquid stream. The produced water degassing drum will facilitate removal of entrained sand via the liquid outlet and prevent deposition in the vessel. A sand jetting system is provided in the vessel to facilitate jetting and sand removal, as required. High pressure produced water from upstream Primary (Inlet) Separator will be used as sand jet water.

Produced water degassing drum operating pressure is 0.5 barg. Operating Temperature changes based on topsides arrival temperature of both Pelican and Domino fields. The average fluid arrival temperature to the separator is 25°C; however, the temperature could be as high as 30°C in the summer.

The degassing drum liquid level will be controlled by a level controller and control valves provided in the liquid outlet. Pressure is controlled by a pressure control located at the gas outlet line. Produced Water outlet flow will be measured by a Flow Indicator.

Alarms and trips are provided as required to facilitate safe operation of the system.

Relief Valves are provided on the vessel for over pressure protection which relieves to LP emergency vent header.

The produced water will be monitored at the produced water outlet line.

All the lines and equipment in the produced water treating system will be designed for the presence of sand content in the fluids and facilitate its removal through produced water disposal. This is to prevent potential accumulation, blockage, erosion and corrosion for lines and equipment.

Well Clean Up Filters System

A well clean up filtration system is currently being taken into consideration to be installed at the SWP for ensuring that the produced water discharge does not contain an unacceptable amount of hydrocarbon during well clean-up operation.

The degassing process is fitted downstream with well clean up vertical filters that will remove any potential remaining drilling fluid that might come out of the wells. These hydrophobic filters will trap the oil and sand while allowing the water to pass through. The filters are capable of filtering approximately 60 m³/h and can remove any potential remaining oily drilling fluid (NAF) content to less than 10 ppm. The current design considers two filters. They will be used alternatively. While one is in use, the second one is in stand-by ready to be used when the first needs to be replaced. Once replaced, the new filter remains in stand-by until the working filter needs replacement, and so on. These filters are used until NAF has been removed from system. The well start-up effluent will be shipped to shore for treatment and considering this the need for using such filters might also be eliminated.

Open Drain System

An open drain system will be installed at the SWP to collect precipitation and any wash down water from the decked areas around the SWP. The majority of decking is open grating to maximize water run-off; however, around equipment which poses a hydrocarbon liquid or chemical spill hazard, secondary containment is provided through plate decking and berms.

Open drain water will be diverted to a sump tank having a capacity of 200 m³. The tank has been dimensioned based on average rainfall and the total area of open drain system. The open drain containment tank is located in one of the jacket legs with a hydraulically driven caisson pump as the method of lifting the sump fluids for either discharge to sea or transfer to the maintenance support vessel for onshore disposal. No skimming system is provided based upon only limited volumes of liquid hydrocarbons, namely lube oil, being present and all utility chemicals being aqueous.

The tank will be provided with an oil and water separator and an analyzer which allows the discharge of the water fraction unless it exceeds the maximum 15 ppm hydrocarbon limit. The oily fraction will be removed periodically by vessel and shipped to shore for treatment by certified/authorized contractors.

The liquid level is continuously monitored to serve as a tertiary detection of platform leaks; equipment instrumentation is the primary detection mechanism and video surveillance is the secondary mechanism. If a large leak is detected, the entire volume is pumped out to the maintenance support vessel for onshore disposal.

during the next planned maintenance trip. If no large leaks are detected between maintenance trips, any collected rainwater and wash-down water is put into recycle to verify the hydrocarbon content utilizing the analyzer on the caisson pump discharge. With confirmation of acceptable hydrocarbon content, the pump is then routed to the produced water caisson downstream of the sample point for combined discharge to sea with the produced water. The sump tank is pumped out from the bottom up until all of the aqueous layer below the gravity separated hydrocarbon layer has been removed. As the hydrocarbon content at the analyzer increases to the maximum acceptable level, indicating that the hydrocarbon layer is starting to reach the pump, discharge to sea is stopped and the remainder of the sump contents are pumped to the maintenance support vessel for onshore disposal at an approved wastewater management facility. If biocide of the system is required, it will be applied by pouring and flushing the biocide down one of the drains into the open drain tank, and the treatment will be performed just prior to pumping out the open drain tank contents to the maintenance support vessel to avoid high concentrations of biocide being discharged to sea.

Produced water Disposal Caisson

The remaining produced water resulting from the produced water degassing drum, rainwater pumped out by the open drain pump, and condensed water from reboiler vent knock out drum (see details in Section 3.6.3.1 – Glycol Regeneration) will be discharged to the sea via a vertical disposal caisson. The caisson is vented to atmosphere via a vent line located on the inlet line. The outlet to sea at the bottom of the caisson is anticipated to be below 60 m water depth.

The discharged produced water will be monitored for oil in water content, salinity, and other parameters as per requirements of a specific monitoring plan for operation phase approved by the competent authorities.

6.1.2 Air protection

6.1.2.1 Existing situation

Onshore

The onshore project site has currently agricultural land use and no industrial activities were identified within or in the closest proximity of the project site.

There are no existing industrial air pollution sources identified in the onshore project area. The main existing sources of air pollution from the onshore project area include:

- Road and rail traffic, especially during touristic season, through the existing road (DN39, communal road DC4, and local earth roads) and railway (Constanta – Mangalia railway line) infrastructure within the project area;
- Air traffic operations performed at Tuzla Airport; and
- Household heating (especially during cold season) and food preparation.

An existing non-hazardous waste landfill has been identified at approximately 5 km distance of the southern limit of the onshore project site. The landfill is located in Schitu village, Costinesti commune and is operated by SC IRIDEX GROUP.

The main odor sources present in Tuzla and Costinesti areas include animal farms and the existing non-hazardous waste landfill located in Costinesti. However, the distance between the project site and these sources is more than 5 km therefore the odor impact may be considered unlikely.

Offshore

The main existing activities in the Black Sea offshore area include shipping, fishing, and oil & gas exploration and production operations. The main sources of air pollution include power generators and transportation vessels (both ships and aircraft), as well as, flaring from the existing oil and gas offshore facilities.

Location of the future SWP is in the open sea, at approximately 160 km to the shore. There are no other platforms in operation/exploration in a 50 km radius from the SWP.

Fishing is limited to shallower water depths due to the capabilities of the majority of the used vessels. The Romanian fleet operates up to 30 to 35 marine miles (55 to 65 km) out in the Black Sea, or a water depth of approximately 60 m as a consequence of the characteristics of the vessels and their limited autonomy.

Shipping lanes crossing the export pipeline route consist of the following:

- Ships sailing between the Ukrainian harbors of Odessa, Chornomorsk (Illichivsk), Yuzhny and Nikolaev and the Bosphorus area;
- Ships between Romanian harbors of Constanta, Midia and Galati and the Bosphorus area;
- Ships between Bulgarian harbors of Varna and Burgas and Romanian and Ukrainian harbors.

Ships traveling to Romania are about 4,180 ships per year with 75% of them estimated to cross the pipeline corridor. The overall total (all vessel sizes and all ports from Romania, Ukraine, and Bulgaria) is 11,390 vessels in a year, or an average of 31 vessels per day. Each vessel arriving is assumed to leave again after a short period of time. A conservative estimate of the number of crossings for the production pipeline is therefore 2 times the number of harbor visits presented above, resulting in 22,780 crossings in a year, or an average of 62 crossings per day.

Existing Air Quality

There is no air quality monitoring network located within the onshore or offshore project site.

Constanta County operates seven continuous monitoring stations, measuring nitrogen oxides (NO_x), nitric oxide (NO), sulphur dioxide (SO₂), nitrogen dioxide (NO₂), carbon monoxide (CO), benzene, PM₁₀, PM_{2.5} and ozone (O₃). PM samples are also obtained and analysed for heavy metals (e.g., Pb, Cd, Ni, As). The locations and the characteristics of each station are detailed in Table 22 and are spatially illustrated in Figure 10.

Table 22 – Automated monitoring network in Constanta County

European Code	Station Name	Type of Station	Type of station's Area	Pollutants Monitored	City	Distance to onshore site (km)
RO0131A	CT-1	Traffic	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, Benzene, PM ₁₀ , Heavy metals*	Constanta	31.8
RO0132A	CT-2	Background	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, O ₃ , Benzene, PM _{2.5}	Constanta	31.2
RO0133A	CT-3	Background	Suburban	SO ₂ , NO _x , NO, NO ₂ , CO, O ₃ , Benzene, PM ₁₀ , Heavy metals*	Navodari	52.5
RO0134A	CT-4	Traffic	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, Benzene, PM ₁₀ , Heavy metals*	Mangalia	25
RO0135A	CT-5	Industrial	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, O ₃ , PM ₁₀ , Heavy metals*	Constanta	27.7
RO0136A	CT-6	Industrial	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, O ₃ , Benzene	Navodari	53.9
RO0137A	CT-7	Industrial	Urban	SO ₂ , NO _x , NO, NO ₂ , CO, O ₃ , PM ₁₀ , Heavy metals*	Medgidia	60.8

Note: * Heavy metals (e.g., Pb, Cd, Ni, As) are analyzed from particulate matter (PM₁₀) samples.

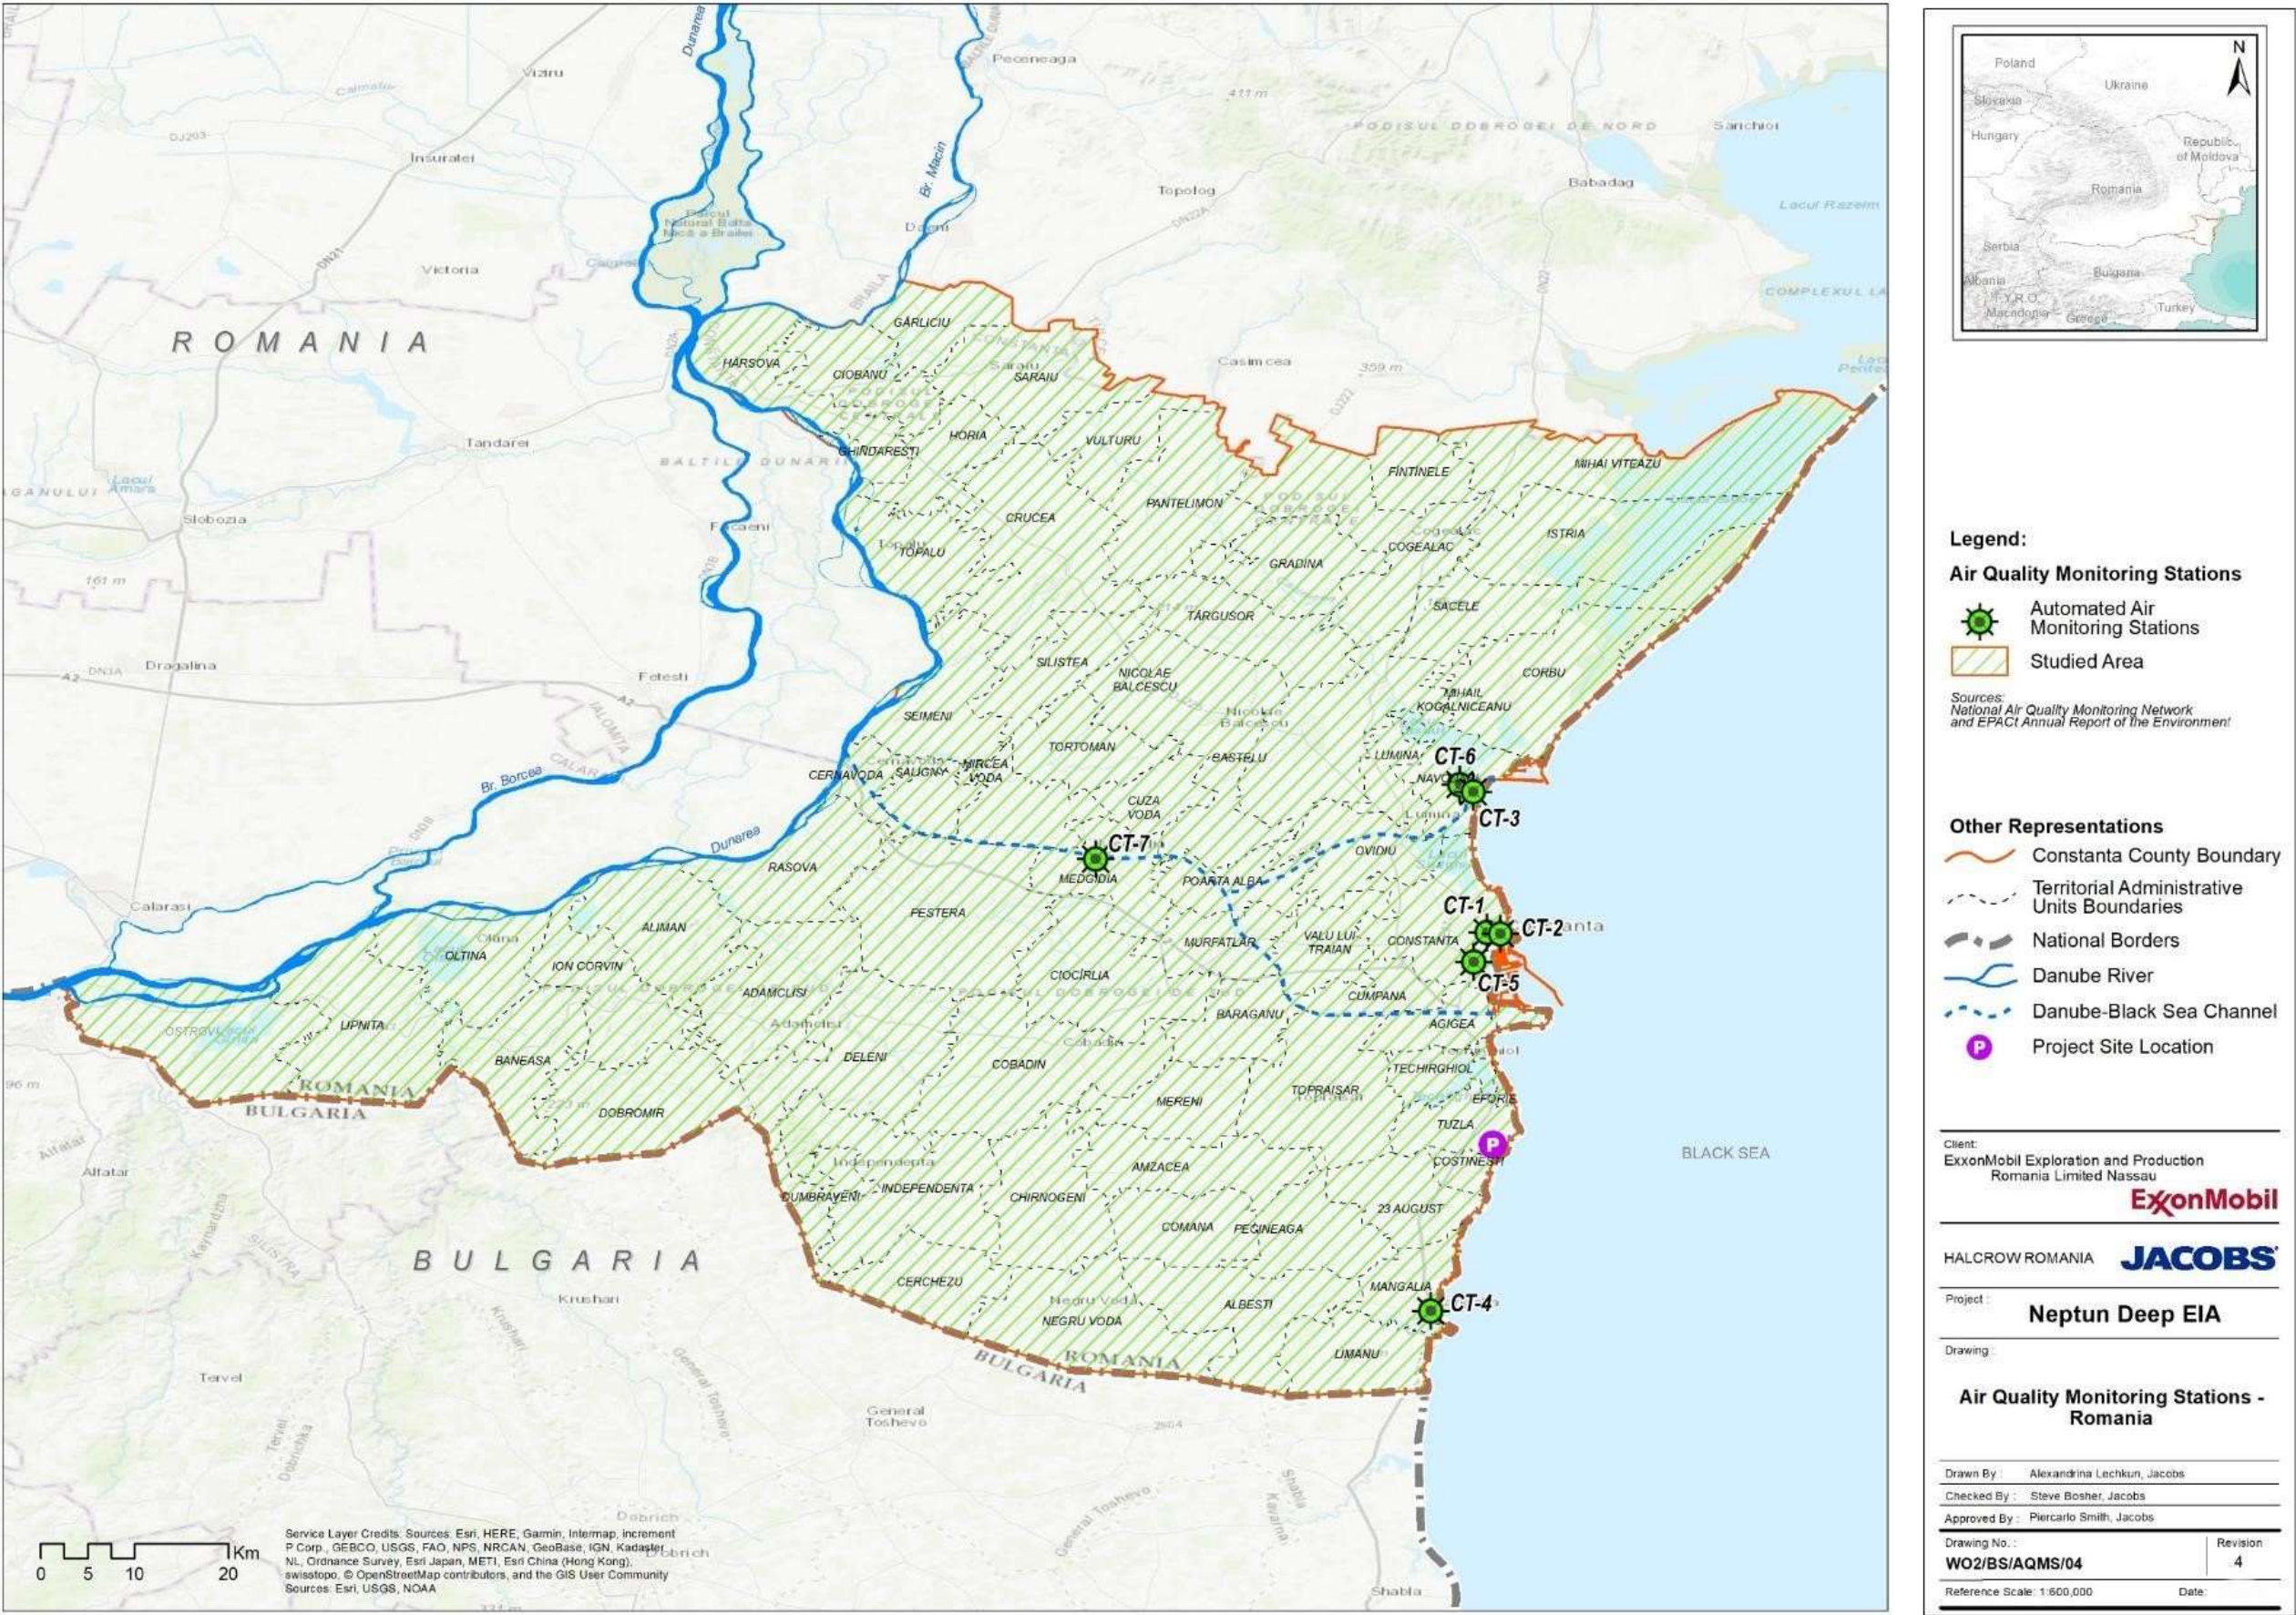

Figure 10 - Automated Monitoring Stations in Constanta County

The two closest monitoring stations to the onshore project site are represented by CT4 station located in Mangalia (25 km distance to the south) and CT5 station located in Constanta (27.7 km distance to the north). Both stations are located in urban areas, however the one from Mangalia is intended to monitor road traffic emissions and the one from Constanta to monitor the impacts of industrial activities. Both stations are located close to the seashore, 0.5 km and 1.5 km, respectively, similar to the onshore project site location.

Table 23 shows the annual mean concentrations of all monitored pollutants calculated for each station in 2020. The data was obtained from the Constanta Environmental Protection Agency's Annual Air Quality Preliminary Report of the Environment, 2020.

Table 23 – Mean annual concentrations of all monitored pollutants per station in Constanta County (2020)

Station	NO ₂ (µg/m ³)	SO ₂ (µg/m ³)	CO (mg/m ³)	O ₃ (µg/m ³)	PM ₁₀ * (µg/m ³)	PM _{2.5} (µg/m ³)	C ₆ H ₆ (µg/m ³)	Pb (µg/m ³)	Ni (µg/m ³)	Cd (µg/m ³)	As (µg/m ³)
CT1	53.78	4.79	0.4	N/A	25	N/A	1.49	0.01	3.27	0.19	0.9

Note: * Gravimetric method

A summary of the air monitoring results recorded in 2020 at the monitoring stations from Constanta County, as presented in the 2020 Annual Air Quality Preliminary Report (<http://www.anpm.ro/web/apm-constantia/raportare-anuala>), as presented in summary below:

- SO₂: All monitoring stations recorded mean hourly concentrations below the human health hourly limit (350 µg/m³). The mean daily concentrations were recorded below the human health daily limit (125 µg/m³) and below the upper evaluation target limit (75 µg/m³). No limits are provided by the legislation in force for annual average;
- NO₂: Five stations (from 7 stations) recorded mean hourly concentrations below the human health hourly limit (200 µg/m³). Two exceedances of the hourly limit were recorded at the CT1 station, and one exceedance was recorded at the CT5 station. The annual mean concentration limit (40 µg/m³) was exceeded at the CT1 station;
- CO: All monitoring stations recorded maximum daily concentrations (8 hours) below the human health limit (10 mg/m³). No limits are provided by the legislation in force for annual average;
- Ozone (O₃): All monitoring stations (five stations) recorded maximum hourly concentrations below the alert threshold (240 µg/m³), respectively below reporting threshold (180 µg/m³). The human health target limit (120 µg/m³) was exceeded at the CT7 station in Medgidia (a total of 32 days with exceedances recorded) and CT6 station in Năvodari (2 days with exceedances recorded). No annual average limit is established for ozone;
- PM₁₀ (gravimetric method): All monitoring stations (6 stations monitoring PM) recorded concentrations below human health annual limit (40 µg/m³) and upper evaluation target (28 µg/m³). Comparing to the previous reporting year (2019), exceedances of the daily limit were recorded at the CT1 station (11 exceedances), CT2 station (4 exceedances), CT3 station (11 exceedances), CT7 station (2 exceedances), and CT5 station (7 exceedances). The annual report highlighted that human health impact assessment studies are required to evaluate the impact of PM10 high values on human health and considering the climate conditions in Constanta County;

- PM_{2.5}: The human health annual limit (25 µg/m³) and the upper evaluation threshold (17 µg/m³) were not exceeded;
- Heavy metals (analyzed from PM₁₀): The annual mean concentrations did not exceed the annual limit, the upper and upper evaluation thresholds;
- Benzene (C₆H₆): All monitoring stations (5 stations monitoring benzene) recorded concentrations below the annual average limit (5 µg/m³) stipulated by the legislation in force.

6.1.2.2 Sources of pollutants for air, pollutants, including odor sources

Construction Phase

The main sources of potential air emissions during onshore construction phase include:

- Execution of site preparation and civil works;
- Handling of the excavated soil, backfilling material, aggregates, and construction materials;
- Handling of construction waste (e.g., soil cuttings resulting from microtunnel execution);
- Construction site traffic related dust emissions;
- Emissions generated by vehicles and equipment engines used for construction of onshore facilities (NGMS, CCR, and other facilities), installation of onshore section of pipeline and FOC, and execution of shore crossing microtunnel;
- Emissions resulted from use of diesel generators for sourcing power to the construction facilities and equipment;
- Emissions from pre-commissioning operations (welding, concrete coating, painting, etc.) performed on site;
- Emissions generated by road traffic that will take place to transport equipment, aggregates and other construction materials to the construction works sites.

The main sources of atmospheric emissions during offshore drilling/construction/installation/commissioning include:

- Fuel combustion (diesel fuel, aviation fuel) related emissions from construction/installation vessels and barges used to support drilling/construction and installation/commissioning works and helicopters used to transfer personnel offshore during these phases;
- Emissions resulted from offshore power/heating generation (e.g., drilling rig, support vessels and barges, portable generator used to provide power for the initial startup of the SWP);
- Emissions from welding operations performed during pipeline and SWP installation.

The main potential air pollutants released during the construction activities including:

- Nitrogen oxides (NO_x), sulfur dioxide (SO₂), carbon monoxide (CO), carbon dioxide (CO₂), particulate matter (PM), heavy metals, and hydrocarbons, as a result of the internal combustion engines of the vehicles and equipment used for performance of drilling, construction and installation, and commissioning works;

- Particulate matter (dust) due to earthwork movements (site clearance, soil excavation, backfilling), traffic, handling of construction materials (soil, mineral aggregates, and construction material) and waste (e.g., soil cuttings resulted from microtunnel execution);
- Heavy metals and gases from welding processes;
- Volatile organic compounds (VOC) from painting operations.

Operation Phase

The main sources of potential air emissions and pollutants during operation phase of onshore facilities include:

- Diesel fuel related emissions from the back-up diesel generator used to provide power to the CCR and NGMS;
- Emissions from mobile sources inside the onshore project site (e.g., vehicles used by the operators and visitors at the CCR and NGMS sites);
- Emissions from regular maintenance operations at the NGMS and CCR sites (e.g., welding), if applicable;
- Emissions from HVAC systems installed at the CCR.

An atmospheric vent stack located within the fenced NGMS boundary will allow scheduled and planned venting of NGMS gas piping.

During the operation phase of the offshore infrastructure, the main air emissions are associated with:

- Energy generation (main power gas turbine generators, gas driven essential service generator, temporary diesel generator transported at the SWP used for commissioning and initial startup of the SWP or for back up to main and essential power generation); the main pollutants are NO_x and CO (as a result of natural gas combustion);

Emissions from the relief, blowdown, and flare system installed at the SWP: The first function of the flaring and venting system is to safely dispose of low-pressure gas from the process (mainly TEG regeneration). The second function of the flaring and venting system is to safely release high pressure gas in case of non-routine events, e.g., if the flow is blocked in the export pipeline, or in case of upset in the process. These releases are for short duration only and may happen a few times per year.

There are no continuous high-pressure sources to the flare or vent on the platform. Direct emissions of methane (CH₄) during venting represent GHG emissions;

- Diesel fuel combustion related emissions generated by the operations and maintenance support vessels: the emissions are specific for the Diesel fuel burning in internal combustion engines and the main pollutants are represented by NO_x, CO, SO₂ and particulate matter;
- Aviation fuel combustion related emissions generated by the helicopters used for transportation to/from the SWP;
- Emissions from regular maintenance operations at the SWP and offshore infrastructure (e.g., welding), if the case;
- Emissions from HVAC system installed at the SWP.

6.1.2.3 Installations for the retainment and dispersion of pollutants in the atmosphere

No specific installations for the retainment and dispersion of pollutants in the atmosphere are anticipated to be provided during construction phase. The drilling/construction/installation vehicles and equipment will be controlled to ensure that they are compliant with the applicable air regulations.

During operation phase, no gas odorization equipment (mercaptan equipment) will be included at the NGMS site.

An onshore vent stack and an offshore relief, blowdown, and flare system will operate during production phase. A summary description of these facilities is presented in the paragraphs below.

Onshore Vent Stack

There will be no continuous venting of gas at the NGMS. Scheduled and planned maintenance venting of NGMS gas piping will be through the atmospheric vent stack located within the fenced NGMS boundary.

The vent system at NGMS enables safe disposal of gas inventory and allows depressurization of NGMS piping to 6.9 bars within 20 minutes.

The vent is designed as a 10 m high stack with 12-inch (305 mm) diameter. The height and diameter of the vent are specified to minimize adverse visual impact of NGMS metering station.

The vent will be located away from overhead electrical lines and ignition sources and designed to ensure proper dispersion of vented gas. The vent stack will be at a minimum distance of 25 m from equipment and fence line.

Offshore Relief, Blowdown, and Flare System

A relief, blowdown, and flare system will provide means for the safe disposal of hydrocarbons released from the production facility via pressure safety valve discharge, emergency depressurization, manual venting operations, and controlled release to flare. The relief, blowdown, and flare system to be installed on the SWP includes:

- Relief and Blowdown Vent System collecting discharge of process pressure safety and blowdown valves;
- Low Pressure (LP) Flare System collecting discharge of process pressure control valves;
- Low pressure atmospheric relief vents.

Relief and Blowdown Vent System consists of:

- A High Pressure (HP) Vent collection header, designed to collect relieved fluids and blowdown fluids from systems with a design pressure of 42 barg (in general) or higher. The Blocked Outlet of Primary Separator Scenario is the controlling scenario for sizing of the HP Vent Header;
- A LP Vent collection header designed to collect relieved fluids and blowdown fluids from selected systems with a design pressure less than 42 barg. The Gas Blow-by Scenario from Primary Separator to Degassing Drum controlling scenario for sizing of the LP Vent Header;
- A Vent Scrubber for separation of liquids from relief loads and associated pump. The Gas Blow-by Scenario from Primary Separator to Degassing Drum based on the smaller level control valve is the controlling scenario for sizing of Vent Scrubber;
- A Vent Header from Vent Scrubber to the Vent Stack / Tip. The Total Power Failure / Instrument Power Failure Scenario is the controlling scenario for sizing of the Vent Header;

- An Emergency Cold Vent Stack / Tip located at the end of the Vent Header (Boom) with associated fitting/components to detect incidental ignition. Total Power Failure / Instrument Power Failure is the controlling scenario for the Vent Stack / Tip design, and for the boom length based on thermal radiation in case of incidental ignition;
- A nitrogen snuffing system provided for use after potential incidental ignition, i.e., lightning. Snuffing system sizing criteria based on normal platform operation with produced water drum PSV – pressure safety valve leaking or failing open.

LP Flare System consists of three components as follows:

- LP Flare collection header designed to collect gas discharges from pressure reducing valves in continuous service. The Total Power Failure/Instrument Power Failure Scenario is the controlling sizing scenario for sizing of the LP Flare Header.
- LP Flare Stack/Tip designed to burn the continuous gas releases from the platform to comply with local environmental emission regulations. LP Flare Tip shall maintain flame stability, minimize burn-back, reduce flame pull-down, and meet upstream conditions and requirements for back pressure. LP Flare Tip includes continuous burning pilots. The Total Power Failure/Instrument Power Failure Scenario is the controlling sizing scenario for sizing of the LP Flare.
- Automatic High Energy Ignition to be used as the primary ignition source for flare pilots with a Flame Front Generator as back-up.

Low pressure atmospheric relief vents include the jacket legs PSVs, produced water caisson vent, chemical tank PSVs and lube oil tank vents.

6.1.3 Protection against noise and vibration

6.1.3.1 Existing situation

6.1.3.1.1 Onshore

6.1.3.1.1.1 Existing noise sources in the project area

The site proposed for the onshore facilities of the Project is not located in an area with existing significant fixed noise sources. The neighbouring areas are mainly rural and touristic areas, and the main economic activities are represented by agricultural activities, small shops, accommodation facilities and restaurants. Many of the touristic facilities have a seasonal, temporary activity, being active mainly during the summer season.

The main existing noise sources in the project area are represented by the transport infrastructure: roads, railway, and aerodrome.

The closest major road to the onshore project site, with noise maps available according to Government Decision - GD no. 321/2005 (*republished), is the National Road 39 (DN39), located to the west of NGMS site, at approximately 1.8 km distance. In the area there are also a number of secondary roads (county, communal and local). According to the Strategic Noise Map for DN39, available on CNAIR web site, the noise levels from the national road range from more than 75 dB(A) at the road level to less than 35 dB(A) at approximately 400 m.

The closest railway from the onshore project site is represented by the Constanta – Mangalia section, which crosses the Project site, being located at the East border of the NGMS. For this railway section noise maps are not required by the Environmental Noise Directive (END), and noise measurements were not identified in publicly available sources. Railway noise as opposed to that from a busy road is not a continuous noise source type, but depending on the rail traffic, it is characterized by discrete noise events associated with train passages.

The closest airport from the project site, Tuzla Private Airport (also known as Tuzla Aerodrome), is located to the north-west of the onshore project site at approximately 2 km from the NGMS. Tuzla Private Airport is a small airport for charter aircraft with an area of 36 ha. For this airport noise maps are not performed, and noise measurements were not identified in publicly available sources.

Other important noise sources to be considered for the characterization of the existing situation are the industrial sources. No significant industrial noise sources were identified in the vicinity of the project site location. The study area extended approximately 4 km from the onshore project site location, within Tuzla and Costinesti localities. As previously mentioned, the neighbouring areas are mainly rural and touristic areas and the main economic activities are represented by agricultural activities, small shops, accommodation facilities and restaurants.

At a distance of approximately 5 km south from the onshore project site location, in Costinesti Administrative Territorial Unit, Schitu village, it is located a municipal waste landfill. According to the Site report for this landfill, available on EPA Constanta website, the A-weighted equivalent continuous sound level, LAeq measured on the northern border of the landfill site, near the main gate, have recorded values of 60.2 dB(A) and 62.8 dB(A) measured in 2014 and 2015, respectively. Given the large distance between this facility and the onshore project site location, the landfill activities are unlikely to influence the ambient noise level at the project site.

Significant economic activities in terms of noise generating activities are located in Mangalia and Constanta municipalities, at large distances from the onshore project site.

6.1.3.1.1.2 Noise sensitive areas

According to Order no. 119/2014 for approval of Norms of hygiene and public sanitation regarding the living environment of the population, protected territory is a "territory in which exceedance of maximum admissible concentrations of physical, chemical and biological pollutants from environmental factors is not allowed; it includes residential areas, parks, nature reserves, areas of balneo-climatic interest, areas of rest and recreation, social-cultural institutions, educational institutions and medical institutions".

In order to identify Noise Sensitive Areas (NSA) near the onshore project site location, beside the field surveys, there were analysed different GIS resources including satellite images, topographic maps, and vectorial datasets such as buildings and residential areas.

The approximate distances between the identified NSAs and the project site boundary are presented in Table 24.

Table 24 - Closest noise sensitive areas from the project site

Type of NSA	Name	Approximate distances to the Project site (km)	Applicable noise limits dB(A) ¹	
			Daytime (07:00 - 23:00)	Night-time (23:00 - 07:00)
Residential areas	Costinesti	0.1	55 50 ²	45 40 ²
	Tuzla	1.6		
Hotel	Costinesti	2.1		
School	Tuzla	2.7		
Church	Tuzla	2.7		
Natural reserve	Techirghiol Lake	5		

¹ according to Order no. 119/2014 noise limit criteria.

² applicable noise limits to be correlated with the results of the baseline measurements. In cases where an objective will be located in an area in the vicinity of a protected territory where the background exterior noise before the objective construction does not exceed 50 dB (A) during the day and 40 dB (A) during the night.

6.1.3.1.1.3 Noise measurements in the project area

In order to characterize the existing noise levels in the project area (the baseline conditions for existing noise levels at the project site, as well as the noise conditions for the sensitive receptors in the area), noise measurements were performed in conformity with the Romanian and European standards.

The noise survey locations have been defined within a 2 km distance around the onshore project site location. The noise baseline measurements included sampling at the NGMS onshore parcel boundaries and in the vicinity of the closest sensitive receptors. The measurements results have showed that the majority of the baseline measurement locations are within the applicable noise limit with some of the measured noise levels in the area exceeding the maximum permissible levels. The background noise levels in the area are mainly influenced by the traffic on the national road DN 39, as well as by the traffic on the railway. The results at the sensitive receptors were also influenced by domestic activities carried out in the respective areas (e.g., animal husbandry, construction activities).

According to Order 119/2014, in cases where an objective will be located in an area in the vicinity of a protected territory where the background exterior noise before the objective construction does not exceed 50 dB (A) during the day and 40 dB (A) during the night, the maximum permissible levels will be 50 dB (A) during the day and 40 dB (A) during the night. Therefore, for the sensitive receptors (residential) where the background noise does not currently exceed 50 dB (A) during the day and 40 dB (A) during the night, the activities from the project will meet the regulatory noise requirements during its execution and operation.

6.1.3.1.2 Offshore

There is no noise and vibration level monitoring network located within the offshore project site. The main existing source of noise and vibration within the offshore project area is represented by the traffic of transportation and fishing vessels. The vessels equipment (e.g., power generators, pneumatic equipment, cranes) represent an existing source of noise in the offshore project area.

Aircraft traffic is also representing a source of noise in the offshore project area.

6.1.3.2 Noise and vibration sources

6.1.3.2.1 Onshore

During the construction phase, the noise sources will have a temporary character and duration, which they will manifest locally and intermittently. The main noise sources will be represented by:

- The operation of equipment used during the construction works (e.g., transport vehicles, heavy trucks, excavators, cranes, bulldozers, microtunnelling equipment, diesel generator) – engines functioning, handling of materials and equipment (e.g., handling of pipes);
- The excavation activities, respectively earth loading and unloading;
- The traffic on the construction site area, working fronts and on the access roads.

Based on the current information, it is estimated that during the construction works the following main equipment will be used:

- Earthmoving equipment used to prepare the terrain: bulldozers (~ 115 dB);
- Excavating equipment: excavators (~ 115 dB);
- Compacting equipment: compactors (~ 105 dB);
- Cranes (~ 95 dB);

- Tunnel boring machine (TMB) (~ 90 dB);
- Heavy trucks: several vehicles/day (~ 110 dB);
- Diesel generators (~ 78 dB).

The construction works will represent an important noise source, with the potential of significantly affecting the neighbouring sensitive receptors for a limited period of time. The noise modelling for a worst-case scenario (a maximum load with equipment and simultaneous operations) and a normal scenario will be presented in the subsequent stages of the procedure for obtaining the Environmental Agreement.

During the operation phase of the onshore NGMS, the following noise sources will be present on the site:

- Functioning under normal operation conditions:
 - Flow control valve – ~ 77.5 dBA;
 - On/Off valve – ~ 67.5 dBA;
 - Motor operated valve – ~ 50.2 dBA each;
 - Check valve – ~ 51.0 dBA;
 - Shutdown valve – ~ 50.2 dBA;
 - Shutdown valve – ~ 44.9 dBA;
 - Flow conditioner – ~ 67.8 dBA;
- Functioning in emergency cases:
 - Restriction orifice type 1 – ~ 121.1 dBA;
 - Restriction orifice type 2 – ~ 122.3 dBA;
 - Restriction orifice type 3 – ~ 111.1 dBA;
 - Essential generator package – ~ 78 dBA.

During the operation phase the noise sources will have a continuous character. It is not expected that these sources would significantly affect the neighbouring sensitive receptors. The noise modelling for the normal functioning scenario will be presented in the subsequent stages of the procedure for obtaining the Environmental Agreement (EIA Report).

6.1.3.2.2 Offshore

The main sources of noise and vibration during near shore and offshore construction phase are represented by:

- Well casing installation and performance of drilling operations;
- Execution of dredging/trenching and backfilling works;
- SWP installation (e.g., jacket piling), production pipeline and flowlines installation and other subsea equipment installation;
- Drilling platform, support construction/installation vessels, helicopters, dredging and trenching equipment, and other construction/installation equipment;

- Drilling platform and support vessels related equipment (e.g., power generators, cranes, etc.).

The main potential impacts associated with the noise and vibrations during the offshore operation, are represented by:

- Equipment and operations at the SWP;
- Traffic and equipment of the operations & maintenance vessels;
- Helicopter traffic.

6.1.3.3 Arrangements and equipment for the protection against noise and vibration

6.1.3.3.1 Onshore and shore crossing

During the construction phase will be implemented technological and operational measures for reducing the noise. These are presented in Section 7 of this Presentation memorandum.

During the operation phase of the onshore NGMS, the following equipment for the protection against noise and vibration are foreseen:

- The Flow control valves will be supplied with Whisper Flow III noise trims, which typically reduce noise by 30 dBA;
- The Flow conditioners will be supplied with noise attenuators, which typically reduce noise by 20 dBA;
- The emergency generator will be supplied with insulating case and vibration absorbers.

6.1.3.3.2 Offshore

The main measures for protection against noise and vibration during construction phase include:

- Develop a noise management plan to be implemented during execution of drilling, construction/and installation works;
- Implementation of ACCOBAMS (The Agreement on the Conservation of Cetaceans of the Black Sea, Mediterranean Sea, and contiguous Atlantic area) methodological guidance on underwater noise mitigation measures that are relevant for different types of project operations;
- Use of vessels compliant with applicable marine conventions/regulations (e.g., MARPOL Convention);
- Use of equipment and machinery technically compliant with the best available existing technologies in terms of noise levels;
- Periodic technical checks of vehicles and equipment used to carry out the works;
- Reducing the speed of vessels if marine mammals are present in the area.

The main measures for protection against noise and vibration during operation phase include:

- Use of low noise generation equipment at the SWP;
- Apply administrative controls in the high noise areas at the SWP (e.g., lube oil coolers, air cooler fans, vent KO pump, hydraulic power unit, etc.), such as:
 - Designate the highly impacted areas as restricted area and erect a proper signage such as "high noise area";

- Install visual alarm system for emergency warning purpose;
- Limit personnel duration of stay at highly impacted areas;
- Delivery of health, safety, and environmental awareness training to the operations and maintenance teams and instruct the personnel to wear hearing control protection device where mandatory;
- Periodic technical checks of operations/maintenance vessels and helicopters used for transport of personnel;
- Reducing the speed of operations and maintenance vessels if marine mammals are reported in the area.

6.1.4 Protection against radiation

6.1.4.1 Radiation sources

The natural radioactivity of the environment is the major source of internal and external irradiation of the human body. Natural radioactivity is determined by the presence of radioactive substances in the air, water, soil, vegetation, terrestrial animal organisms that naturally exist since ancient times, to which is added cosmic radiation. The natural reference exposure is 2.4 millisievert (mSv) / year, which is internationally accepted. The two components of natural exposure are: external exposure, 0.85 mSv / year and internal exposure, 1.55 mSv / year. The main and constant factor of human body irradiation is the presence in the free atmosphere of the radioactive gases Radon (Rn-222) and Toron (Rn-220), as well as their descendants.

According to the Environmental Factors Status Report for 2019 prepared by Constanta Environmental Protection Agency, as in the previous years, the artificial radionuclide present in the environment was Cs-137 (identified in air samples, raw water, spontaneous vegetation, uncultivated and arable soils samples collected in Constanta County). It was released into the atmosphere during the Chernobyl accident, was deposited on the ground and has resided there since 1986.

The standard program and the supplementary / special surveillance program in the area of influence of Cernavoda Nuclear Power Plant had as its main purpose the estimation, based on the measurements, of the additional exposure of the population as a result of the functioning of the nuclear plant. The analyzes revealed that in the environment there is no presence of artificial radionuclides in the range of emitters having as its source emissions from the Cernavoda nuclear power plant located at approximately 60 km from onshore project site.

A radionuclide of interest is tritium, detected in precipitation samples, drinking water and surface water. Tritium (H-3) is an unstable isotope of hydrogen, beta emitter (average energy of beta radiation emitted is 5.7 keV and maximum energy of 18.6 keV) with a physical half-life of 12.3 years and a biological half-life of 10 days.

Tritium exists in the environment as a natural radionuclide. It is formed in the upper atmosphere, through the interactions of cosmic radiation with elements in the upper layers of the atmosphere.

As an artificial radionuclide, H-3 is present in the environment due to the operation of nuclear power plants, being one of the activation products resulting in nuclear processes.

The main routes of exposure to tritium are the incorporation of tritiated water by ingestion and by inhalation / absorption through the skin and the incorporation of organically bound tritium by ingestion of food.

The additional exposure of the population in the area as a result of the operation of Cernavoda Nuclear Power Plant is insignificant compared to the natural exposure and is in accordance with national and international regulations on the exposure of the population as a result of nuclear practices.

During the project life, the following main radiation sources are considered:

- Use of sealed radioactive sources contained in instrumentation such as level measurement devices during drilling (e.g., geophysical investigations), construction and operation phases;
- Welding operations during construction/installation (e.g., during preparation of pipeline for installation at the stringing yard, installation of offshore pipelines and SWP, etc.) and operation (e.g. welding during performance of regular maintenance works);
- Thermal radiation resulting from the atmospheric vent system provided on NGMS to allow safe disposal of hydrocarbons released from the facility as a result of emergency depressurization and manual venting operations;
- Thermal radiation from the flaring and venting system installed at the SWP.

6.1.4.2 Devices and equipment for radiation protection

During the project life, the following measures should be applied for radioactive radiation protection:

- Sealed radioactive sources shall be stored securely, tracked during shipment, properly accounted for at all times, and disposed of safely in accordance with the regulations;
- Sealed radioactive sources shall be considered for use in process measurement instrumentation only when there is no other acceptable alternative;
- Safe access shall be provided by ladders, platforms, or other means as necessary so that sealed sources can be installed, maintained, and changed out in order to minimize the potential for radiation exposure and to provide a safe working platform;
- An inventory of all sealed radioactive sources and their locations shall be prepared in order to trigger tracking and safe keeping requirements;
- Each radioactive source shall have the capability of being locked in the shuttered position;
- Installation shall be carried out by properly trained and licensed personnel:
 - Only persons trained and licensed by the appropriate governing entity to mount, repair, relocate, and/or remove the part of the instrument containing the sealed radioactive source shall do so;
 - Proper warning signs shall be installed, and proper barriers used to ensure that unprotected and unauthorized personnel are not inadvertently exposed to radiation;
 - Personnel carrying out the installation shall wear thermo-luminescent dosimeters (e.g., radiation badges) and/or pocket dosimeters (real-time readout);
 - The instrument shutter shall be locked in the closed position (e.g., OFF position) during mounting on, relocation on, or removal from the process equipment.
- An area survey is required to ensure that proper barriers and warning signs are installed to ensure that unprotected and unauthorized personnel are not inadvertently exposed to radiation;
- Persons shall not enter any vessel that contains a nuclear radioactive source or has an attached nuclear gauge unless the shutter has been locked in the closed position;
- A device containing a sealed radioactive source shall be labeled and identified with signs;

- Periodic checks shall be made as required to ensure that the sources are in place, their mounting remains firm, and the shutters are operational. A wipe leak test is required, usually every 6 months, to ensure that the housing remains sound and that no unexpected leakage is taking place;
- Maintenance of the sealed radioactive source shall only be carried out by properly trained and licensed persons employed by the nuclear gauge manufacturer;
- Before anyone may enter a pipe or vessel served by instrumentation containing a sealed radioactive source, the source shall first be retracted and locked out, a radiation survey shall be performed;
- Sealed radioactive sources are hazardous waste and shall be disposed of at approved certified facilities. The preferred method of source disposal is to return it to the manufacturer;
- Manufacturer recommendations and the requirements of all national and relevant international agreements shall be followed;
- The following are essential to handling and tracking of radioactive sources:
 - Sealed radioactive sources shall be controlled items;
 - Sealed radioactive sources shall be kept securely and their location known at all times;
 - A proper chain of custody shall be established and recorded;
 - Sealed radioactive sources shall be handed off to persons authorized to receive them;
 - Any person or organization transferring sealed radioactive sources shall first determine that the person or organization receiving the sources has proper procedures in place that ensure their safe handling;
- Welding activities (e.g. such as for preparation of pipeline installation) will be carried out inside special sheds or tents.

6.1.5 Soil and subsoil protection

6.1.5.1 Existing situation

6.1.5.1.1 Onshore

Local Topography

The topography of Tuzla commune is generally flat with slopes to the sea (east) and north (towards Lake Techirghiol) with a maximum elevation of 60 m above Black Sea level (Baldaran Hill). In the eastern part, the boundary is the shore cliff that has the highest height in the area of Cap Tuzla, with lower cliff heights to the north (Eforie) and to the south (Costinesti).

Geomorphology

From a geomorphology point of view, the onshore project site is located within the Southern Dobrogea Plateau, and more specifically within the subunit called Mangalia Plateau. Similarly, to the Tuzla commune, the project site has a mainly flat topography, with the highest elevation recorded on the western part of the site and slope inclination decreasing towards the east.

Geology

Local geology is represented mainly by topsoil (thickness up to 1.00 m), followed by Pleistocene loess deposits with thicknesses up to 15.00 m, with reddish intercalations indicating layers of paleosol from interglacial periods. Clay deposits are developed on Sarmatian limestones and associated with loess formation; the transition developed gradually thus it is hard to identify. Rock formation is represented by karstified Sarmatian bioclastic limestone, which starts below 20.00 mbgl (as encountered within the boreholes drilled during the 2019 geotechnical investigation campaign performed on site).

Soils

The onshore project site area was subject to an assessment of pedological conditions and soil quality classes, as part of Pedological Study no. 341/16.06.2021 prepared by the Office for Pedological and Agrochemical Studies (OSPA) Constanta. According to the findings of this study, the onshore project site is represented by soils type Lime rich Chernozem part of the Cernisoils Class and are classified under quality class III (third).

The soil classification under a quality class is made based on a quality score. To establish the quality score of the soil, 3 soil profiles were executed from which 15 pedological samples were collected from the project site. The samples collected were analyzed in the OSPA Constanta laboratory for the following parameters: granulometry, pH, salt content, carbonate content, mobile phosphorus, and mobile potassium. According to the analyzes results, within the analyzed area (lands identified under the cadastral numbers 109659, 109729 and 100819) the soils are part of the Cernisols Class - Calcareous Chernozem of black-brown color, with a grainy, angular, loose structure, reaching a thickness of 55 - 60 cm, with a humus content of up to 3.5 - 4 %.

For the onshore project site, historical potential sources of contamination could be represented by the common practice of using pesticides and fertilizers to amend the land quality for agricultural purposes.

6.1.5.1.2 Offshore

Geomorphological description of the Romanian coastal area and the adjacent inner and outer shelf

Shelf Geomorphology

The continental shelf of the Black Sea (29.9% of the bottom surface) represents the submerged prolongation of the continental mass. Its maximum extent is reached in the North-Western part of the Black Sea, where its maximum width reaches approximately 200 km. Here, its depth varies from 0 to 100 m, sometimes reaching 160 m. In other parts of the sea its depth diminishes to less than 100 m, with a width of 2.2-15 km, appearing as a narrow, intermittent band near the Caucasian and Anatolian coasts.

The North-Western continental shelf occupies the Southern part of the Scythian Platform, belonging to the East-European Paleozoic and Epi-Paleozoic; it is characterized by a gentle slope and its relief is represented by a flat erosional plain. Valleys and canyons, most of them representing submarine prolongations of the rivers, complicate the flat relief. The sea level changes occurring in different geological periods resulted in the local formation of submarine terraces or small hillocks, separated by depressions.

Bathymetric, seismic - acoustic, and sedimentological studies performed by GeoEcoMar on the Romanian Black Sea shelf allowed the identification of three distinct units: the littoral zone, the inner shelf, and the outer shelf. Apart from these sections, a very distinctive unit can be pointed out: the Danube Delta.

Inner shelf

The Romanian Black Sea inner shelf is very well defined, having a width of 10–15 km in the northern area and about 1–5 km south of Constanta. Modern sediments locally mask the relict geomorphologic structures. Northwards of Cape Midia, the bottom slope varies between 1.1 ‰ and 4.0 ‰, while southwards of Constanta section, the relict structures are better preserved, especially the submarine terraces, where the slope is steeper (1.6 – 6.0 ‰). Eastwards, the inner shelf boundary is marked by the 27–30 m isobaths.

On the inner shelf, sedimentary processes are dominated by the shift of fair (fine sediments) and stormy weather (sandy sheets). Considering its hydrodynamic and sedimentological structures, the Danube Delta front is the equivalent of the inner shelf unit.

Outer shelf

From its western edge, along the 27–30 m isobaths, the outer shelf develops a very gentle slope (below 1.0 ‰) extending eastwards to its limit placed at about 120 m.

Sedimentation rates are significantly reduced on the outer shelf surface. The most spectacular structure is the Viteaz Canyon, genetically connected with the Danubian Sfantu Gheorghe Branch.

The Danube Prodelta of the outer shelf displays all the known types of deformation processes for non-consolidated sediments.

Relict geomorphologic structures

The Romanian Black Sea shelf reveals the presence of some positive and negative geomorphologic structures, witnesses of older coastal and terrestrial environments, such as submarine terraces, barrier beaches, river valleys, etc.

The internal, western zone of the Romanian shelf stands out as the shallow marine area, which receives clayey and silty sediments supplied by the Danube River. Moving as suspended load, the sediment flux goes beyond the area in front of the Danube Delta but does not reach the eastern external shelf zone. Under the influence of the dominant currents the clayey sediment flux moves southward toward the Bulgarian shelf, keeping closer to the shoreline.

Situated outside the area covered by the Danube fed sediment flux the external, eastern part of the Romanian continental shelf represents an area practically deprived of clastic material. Within this sediment-starved shelf area the condensed sediment accumulation is of biogenic origin, consisting of organic pellets on relict sediments or shell concentrations.

The Danubian sediments seldom reach the shelf area north and northwest of the Danube mouths. Dniester and Dnieper, the main rivers north of Danube Delta, are themselves not significant suppliers of sediment for the north-western Black Sea shelf. These Ukrainian rivers discharge their sedimentary load into lagoons, separated by beach barriers from the Black Sea. Consequently, the sediment-starved status characterizes almost the whole Black Sea continental shelf west of the Crimean Peninsula.

The continental shelf continues with a rather steep continental slope with a 5 - 8° inclination in the North-Western part of the Black Sea and 1 - 3° near the Kerch Strait, which represents 27.3% of the bottom surface. Occasionally, the slope gradient may be as high as 20 - 30°. The continental slope is also incised by many submarine valleys and canyons.

The shelf break, marking the transition from the continental shelf to the continental slope, roughly corresponds to the 100 m isobath, reaching 130 m offshore Crimea and Kerch Strait and 150-170 m in the area of the Canionul Viteaz.

Between the foot of the continental slope and the abyssal plain, there is the piedmont, the greatest geomorphological unit – 30.7% of the bottom surface. The piedmont is represented in the North-Western Black Sea by the massive sediment accumulations from two abyssal fans, the abyssal fan of the Danube River and the abyssal fan of the great Ukrainian rivers – Dnieper, Dniester, and Bug. The piedmont descends to approximately 2000 m water depth and has a gradient of 1:40 – 1:1000. Its continuity is interrupted by structures resembling small hillocks.

The centre of the Black Sea depression, at depths greater than 2000 m, is occupied by an abyssal plain. This has a gradient of less than 1:1000 and descends slowly to a maximum depth of 2212 m, South of Yalta. The

abyssal plain is better developed in the Eastern part of the basin, probably as a result of an increased activity of the turbidity currents. The actual sediments are represented by the coccolithic ooze, overlaying sapropelic sediment.

South Dobrogea Coast and Shelf Geology

The three main tectonic units from Dobrogea and the Pre-Dobrogea Depression are separated by major crustal faults. The Sfântu Gheorghe Fault is the tectonic border between the Pre-Dobrogea Depression and North Dobrogea. Bounded southward by the Peceneaga-Camena Fault, North Dobrogea represents the eastern half of the North Dobrogea Cimmerian Orogen, where the Hercynian basement and its Mesozoic cover are exposed. Central and South Dobrogea represent the exposed parts of the East Moesia, the eastern part of the Moesian Platform. Central Dobrogea is an uplifted block between the Peceneaga-Camena and Capidava-Ovidiu Faults, exposing the Late Neoproterozoic and Ediacaran basement of the Moesian Platform and few erosional remnants of its Mesozoic platform cover. Paleozoic deposits are missing from Central Dobrogea, due to erosion or non-deposition. South Dobrogea is a sunken East Moesian block, bounded by the Capidava-Ovidiu and Intramoesian Faults and exposing only the Mesozoic-Cenozoic Moesian cover.

Geological Considerations – Seafloor

Seafloor and near-seafloor faults are generally restricted to the ridge and graben areas. The production pipeline will cross at least three seafloor faults. The assessment of the faults shows they are not seismically active but rather growth faults which move approximately 0.1 to 1.7 mm/yr.

Surficial mass transport deposits occur throughout the slope and infield. These deposits are generally buried by at least 3 m of normally deposited sediment, suggesting that the slope failures are relict and an increase in shear strength below 3 m below mudline. Gassy sediments are present in water depths less than 700 m.

Geotechnical Considerations

Geotechnical investigation performed in 2014 and 2017 in the offshore project area collected shallow geotechnical samples and performed in situ testing to establish soil properties for the shelf, slope, and infield areas.

The geophysical and geotechnical data were integrated to develop anticipated soil profiles for the slope and infield to define soil properties for foundation and pipeline design, including:

- Soil type encountered across the Upslope and Infield Areas are broadly conformable and are grouped into geotechnical units;
- Soil properties – shear strength, water content, unit weight, plastic limit, liquid limit, particle density, coefficient of consolidation.

At the boundary between onshore and near shore, there is an approximately 15 m high cliff next to a 30 m wide beach. The cliff is eroding approximately 0.3 m/year. Nearshore, the limestone outcrops. In some areas, the rock is covered by 0–5 m (locally 10 m) of gravel and sand, or clay. Water depths vary between 0 and 15 m.

6.1.5.2 Sources of pollutants for soil and subsoil

The main sources of potential soil and subsoil pollution during **onshore construction phase** include:

- Accidental leakage of fuels, oils, chemicals, and other liquids from construction machinery or vehicles, and equipment during execution of construction/installation works;
- Improper management of fuels and chemicals at onshore construction sites (NGMS construction site, microtunneling construction site, stringing yard, pipe storage area, etc.);

- Improper use, handling, and storage of materials (e.g., mineral aggregates, concrete, etc.);
- Land clearing, digging and excavation for construction of onshore NGMS and CCR sites, trenching, installation of onshore section of production pipeline and fiber optic cable, and microtunneling construction (e.g., execution of launch shaft and microtunnel);
- Inadequate storage of construction waste, as well as excavated soil or other wastes;
- Uncontrolled discharges of wastewaters;
- Air emissions due to construction vehicles that may lead, as a consequence of rain washing to potential pollution of soil and groundwater.

The main sources of potential seafloor sediments pollution during **offshore drilling, construction/installation, precommissioning and commissioning phase** include:

- Accidental fuel, oil, chemicals, waste, or other materials leakages from drilling platform and support vessels used during drilling, construction and installation, precommissioning, and commissioning works;
- Improper management and discharge of wastewater generated during drilling, construction/installation, precommissioning and commissioning;
- Dredging/trenching and anchoring in the near shore and offshore areas;
- Inappropriate storage of dredged/excavated material (potential polluted) resulted from dredging/trenching operations;
- Inadequate quality of the material used for backfilling of the excavations/trenches;
- Sea floor installation of offshore infrastructure installation (e.g., production pipeline, flowlines and umbilicals laying, SWP jacket installation, etc.);
- Sea floor settlements of air emissions (e.g., dust) generated during drilling, construction/installation, precommissioning and commissioning phase.

The main sources of potential soil and subsoil pollution during **operation phase of onshore facilities** include:

- Improper use, handling, and storage of fuels and materials at onshore NGMS and CCR sites;
- Improper management of resultant wastes at onshore NGMS and CCR sites;
- Accidental fuels and oils or other materials leakages on soil during operations and maintenance;
- Uncontrolled discharges of wastewaters.

The main sources of potential seafloor sediments pollution during **operation and maintenance of offshore infrastructure**:

- Accidental fuel, oil, chemicals, waste, or other materials leakages from SWP and support vessels used for operations and maintenance activities;
- Improper management and discharge of produced water/wastewater at the SWP and support vessels used for operations and maintenance;
- Support vessels anchoring generating indirect disturbance of sea floor sediments;

- Sea floor settlements of air emissions (e.g., dust) generated during operation and maintenance.

6.1.5.3 Works and equipment for soil and subsoil protection

Onshore

Constructive measures will be implemented at the temporary construction works sites and permanent NGMS and CCR sites and these measures shall contribute to soil and subsoil protection. The main measures to be implemented will include:

- Proper management of topsoil resulting from site vegetation clearance during construction phase; the topsoil will be stripped and stockpiled separately from subsoil for future use in rehabilitation and revegetation;
- Proper storage and management in dedicated areas of excavated soil/drilling cuttings resulting from pipeline installation trenching, launch shaft and microtunnel construction;
- Improvement by desensitization to wetting of ground foundation (0.50 m thickness) at the temporary construction works sites and permanent NGMS and CCR fenced sites; the improvement of the ground foundation will include removal by digging on approximately 50 cm of the loess layer and preparing the "loss pillow" by reusing the material excavated with re-installation in successive layers of 15 - 20 cm thick after compaction;
- Installation of a waterproof geotextile, followed by successive layers of compacted ballast optimal (20 cm), compacted crushed stone (20 cm) and penetrated macadam (10 cm) at the construction works sites (NGMS and CCR construction site, microtunnel construction site);
- CCR fenced site will be provided with a concrete platform around CCR building that is framed by a monolith kerb placed on concrete foundation. The CCR platform full infrastructure includes a waterproof geotextile installed above the improved ground foundation, and successive layers of ballast optimal mixing (20 cm layer), crushed stone (20 cm layer), kraft paper and road concrete layer (20 cm).
- The NGMS technological platform installed within the NGMS fenced site and internal roads to NGMS site and Transgaz tie-in point site will be covered by penetrated macadam. The infrastructure will also include a waterproof geotextile installed above the improved ground foundation, and successive layers of ballast optimal mixing (20 cm layer), crushed stone (20 cm layer) and penetrated macadam (10 cm layer);
- All open surfaces inside NGMS fenced site (excluding technological platform) and block valve fenced site will be covered with crushed gravel;

Other measures to be implemented for soil and subsoil protection during construction and operation phases include:

- Daily checking on the condition of used vehicles, machinery, and equipment;
- Provision of doubled walled tanks and/or secondary containment around equipment that pose fuels, liquids, or chemicals spill hazards (e.g. fuel tanks used to supply the construction equipment, diesel generators, etc.);
- Proper storage of hazardous materials in dedicated indoor warehouses;
- Proper storage of chemicals (e.g. lube oils, grease, hydraulic fluids, and other products used for equipment and vehicles) in dedicated chemical-tight barrels which will be kept on site in minimal quantities;

- Temporary storage of construction waste (e.g. soil cuttings from microtunnel execution) on specially designed areas and disposal of construction waste through authorized operators;
- Proper management of all waste generated during construction and operation phases, including storage of waste in dedicated containers provided with lids, located in appropriate designated areas and periodical disposal thereof by an authorized operator;
- Proper management and disposal of wastewater generated during construction and operation phases;
- Implementation of mitigation measures for stockpiling management and dust control.

Offshore

The main mitigation measures to be implemented for sediments protection during project lifecycle include:

- Develop specific dredging execution plans and monitor turbidity levels;
- Use of dredging equipment that are appropriate to the depths and material types to be dredged;
- Removal and disposal of the dredge/excavated material only to approved locations and in accordance with the provisions of the dredging/trenching plans and regulatory requirements;
- Carrying out the drilling, construction and operation works in accordance with applicable marine environmental and safety regulations;
- Proper maintenance and regular checking of equipment and vessels to eliminate the possibility of any leakages;
- Immediately removing oil products accidentally leaking from operational machinery, by using absorbent materials, which will later be stored in special designated locations;
- Proper management of waste resulted from drilling, construction and installation, and operation phases;
- Proper management and storage of chemicals used during project lifecycle;
- Monitoring and disposal of wastewater streams resulted during project lifecycle in accordance with the provisions of regulatory permits/endorsements issued by the competent authorities.

6.1.6 Protection of terrestrial and aquatic ecosystems

6.1.6.1 Existing situation

6.1.6.1.1 Onshore

The information presented in this section is based on data extracted from scientific resources relevant for the project area, as well as from the results of the site surveys performed for this project during the period 2018 – 2019.

6.1.6.1.1.1 Onshore Flora

To establish the presence and distribution of vegetation communities on and near the project site, the main spatial source used was the CORINE Land Cover (CLC) 2018 dataset. Land use classes that form the vegetation cover were selected for description using the latest CLC nomenclature (Kosztra et al., 2019). On and near the project site, the following land use classes were identified:

- 122 Road and rail networks and associated land (motorways and railways, including associated installations (stations, platforms, embankments, linear greenery narrower than 100 m);
- 142 Sport and leisure facilities (areas used for sports, leisure and recreation purposes. Camping grounds, sports grounds, leisure parks, golf courses, racecourses, etc. belong to this class, as well as formal parks not surrounded by urban areas);
- 211 Non-irrigated arable land (Cultivated land parcels under rainfed agricultural use for annually harvested non-permanent crops, normally under a crop rotation system, including fallow lands within such crop rotation. Fields with sporadic sprinkler-irrigation with non-permanent devices to support dominant rainfed cultivation are included);
- 222 Fruit trees and berry plantations (cultivated parcels planted with fruit trees and shrubs, intended for fruit production, including nuts, and the planting pattern can be by single or mixed fruit species, both in association with permanently grassy surfaces).

The CLC 2018 dataset did not indicate any natural or seminatural areas on and near the project site.

Field surveys of **flora and habitats** were carried out monthly, in accordance with the *Work Plan for the Onshore Biological Environment Baseline Study*, September 2018, prepared by EPC Consultanță de mediu SRL under the Neptun Deep project. Vegetation at and near the project site was analyzed during all the appropriate seasons: serotinal <late summer> (August – September 2018), autumnal (September – October 2018), prevernal <early spring> (March – April 2019), vernal <spring> (April – May 2019), and estival <summer> (June – July 2019).

For the vegetation analysis, the method of longitudinal transects supplemented with the phytocoenological relevé (sampling plots) method (Cristea et al., 2004) was used. This method involved identifying the observed plant species and plant communities along a line whose length was determined according to the habitat complexity. In some cases, transects were on the edge of features (e.g., active agriculture field) because that is where the natural vegetation would be located. In other cases, transects were performed on the edge and internal to a feature (e.g., in abandoned agricultural land). For each plot (relevé), the abundance-dominance (AD) index of each species was recorded, representing the spatial relationships between the phytocoenoses that defined each habitat type.

For the taxonomic identification of the plant species, the most recent publications on plant identification published in Romania were used (Ciocârlan, 2009, Sârbu et al., 2013), as well as references regarding the flora of Romania (Flora României, Săvulescu et al., 1952-1976, vol. I-XIII). The identified phytotaxa were grouped according to the systematic classification in use, included in the synthesis papers on the vegetation of Romania (Sanda et al., 2008).

During the field surveys, a total of 157 plant species (both spontaneous and cultivated) were identified on and near the project site. The species were grouped into the representative families and included in the characteristic order. The order with the largest proportion of species was Asterales (20%) <an order of daisy-like flowering plants>, likely due to anemochory (wind dispersal) assisted by pappus¹. The order Poales <an order of flowering plants including grasses, bromeliads and sedges> was also well represented, registering 13%. This is probably because the flowers of many species are wind pollinated. The largest number of synanthropic² plant species were in the following families: *Asteraceae*, *Brassicaceae*, *Fabaceae*, *Rosaceae*, *Chenopodiaceae*.

Vegetation was sampled in 9 zones corresponding to different land use classes, differentiated by the vegetation communities that define them. These zones are:

¹ Pappus is a downy, bristly, or other tuft like appendage of the achene of certain plants, as for the dandelion and the thistle.

² Synanthropes is a term applied to species of wild animals and plants of various kinds that live near, and benefit from, an association with humans and the somewhat artificial habitats that humans create around them.

- Zone 1 - **SH1** (Shelterbelt 1): the forest shelterbelt and shrub area located near the European road E 87 (National Road DN 39);
- Zone 2 - **IC** (Irrigation channel): the irrigation channel located along the future access road that will be constructed during the project implementation;
- Zone 3 - **PO** (Peach orchard): the peach orchard located to the south of the irrigation channel, along the future access road;
- Zone 4 - **STSA** (Small trees and shrubs area along the railway): the area with small trees and shrubs located along the railway line;
- Zone 5 - **AL** (Agricultural lands): lands covered with crops of oilseeds and cereals located to the north of the irrigation channel, on the future NGMS site and also in other areas near the project site;
- Zone 6 - **PCA** (Pipeline corridor area): the land between the railway and the agricultural road (unpaved dirt road) that is near the terraced area on the seashore. This area also has agricultural land, but it was delimited and investigated separately due to the different composition of the vegetation, established due to the fact that the land was uncultivated for about 2 – 3 years (according to Google Earth satellite images);
- Zone 7 - **SH2** (Shelterbelt 2): the forested area near the future NGMS site;
- Zone 8 - **SA** (Sand area): the sand area located along the seashore (beach);
- Zone 9 - **TA** (Terraced area on the seashore): the terraced area located along the coastal line, representing the inland margin.

These zones are presented in Figure 11 and subsequently described.

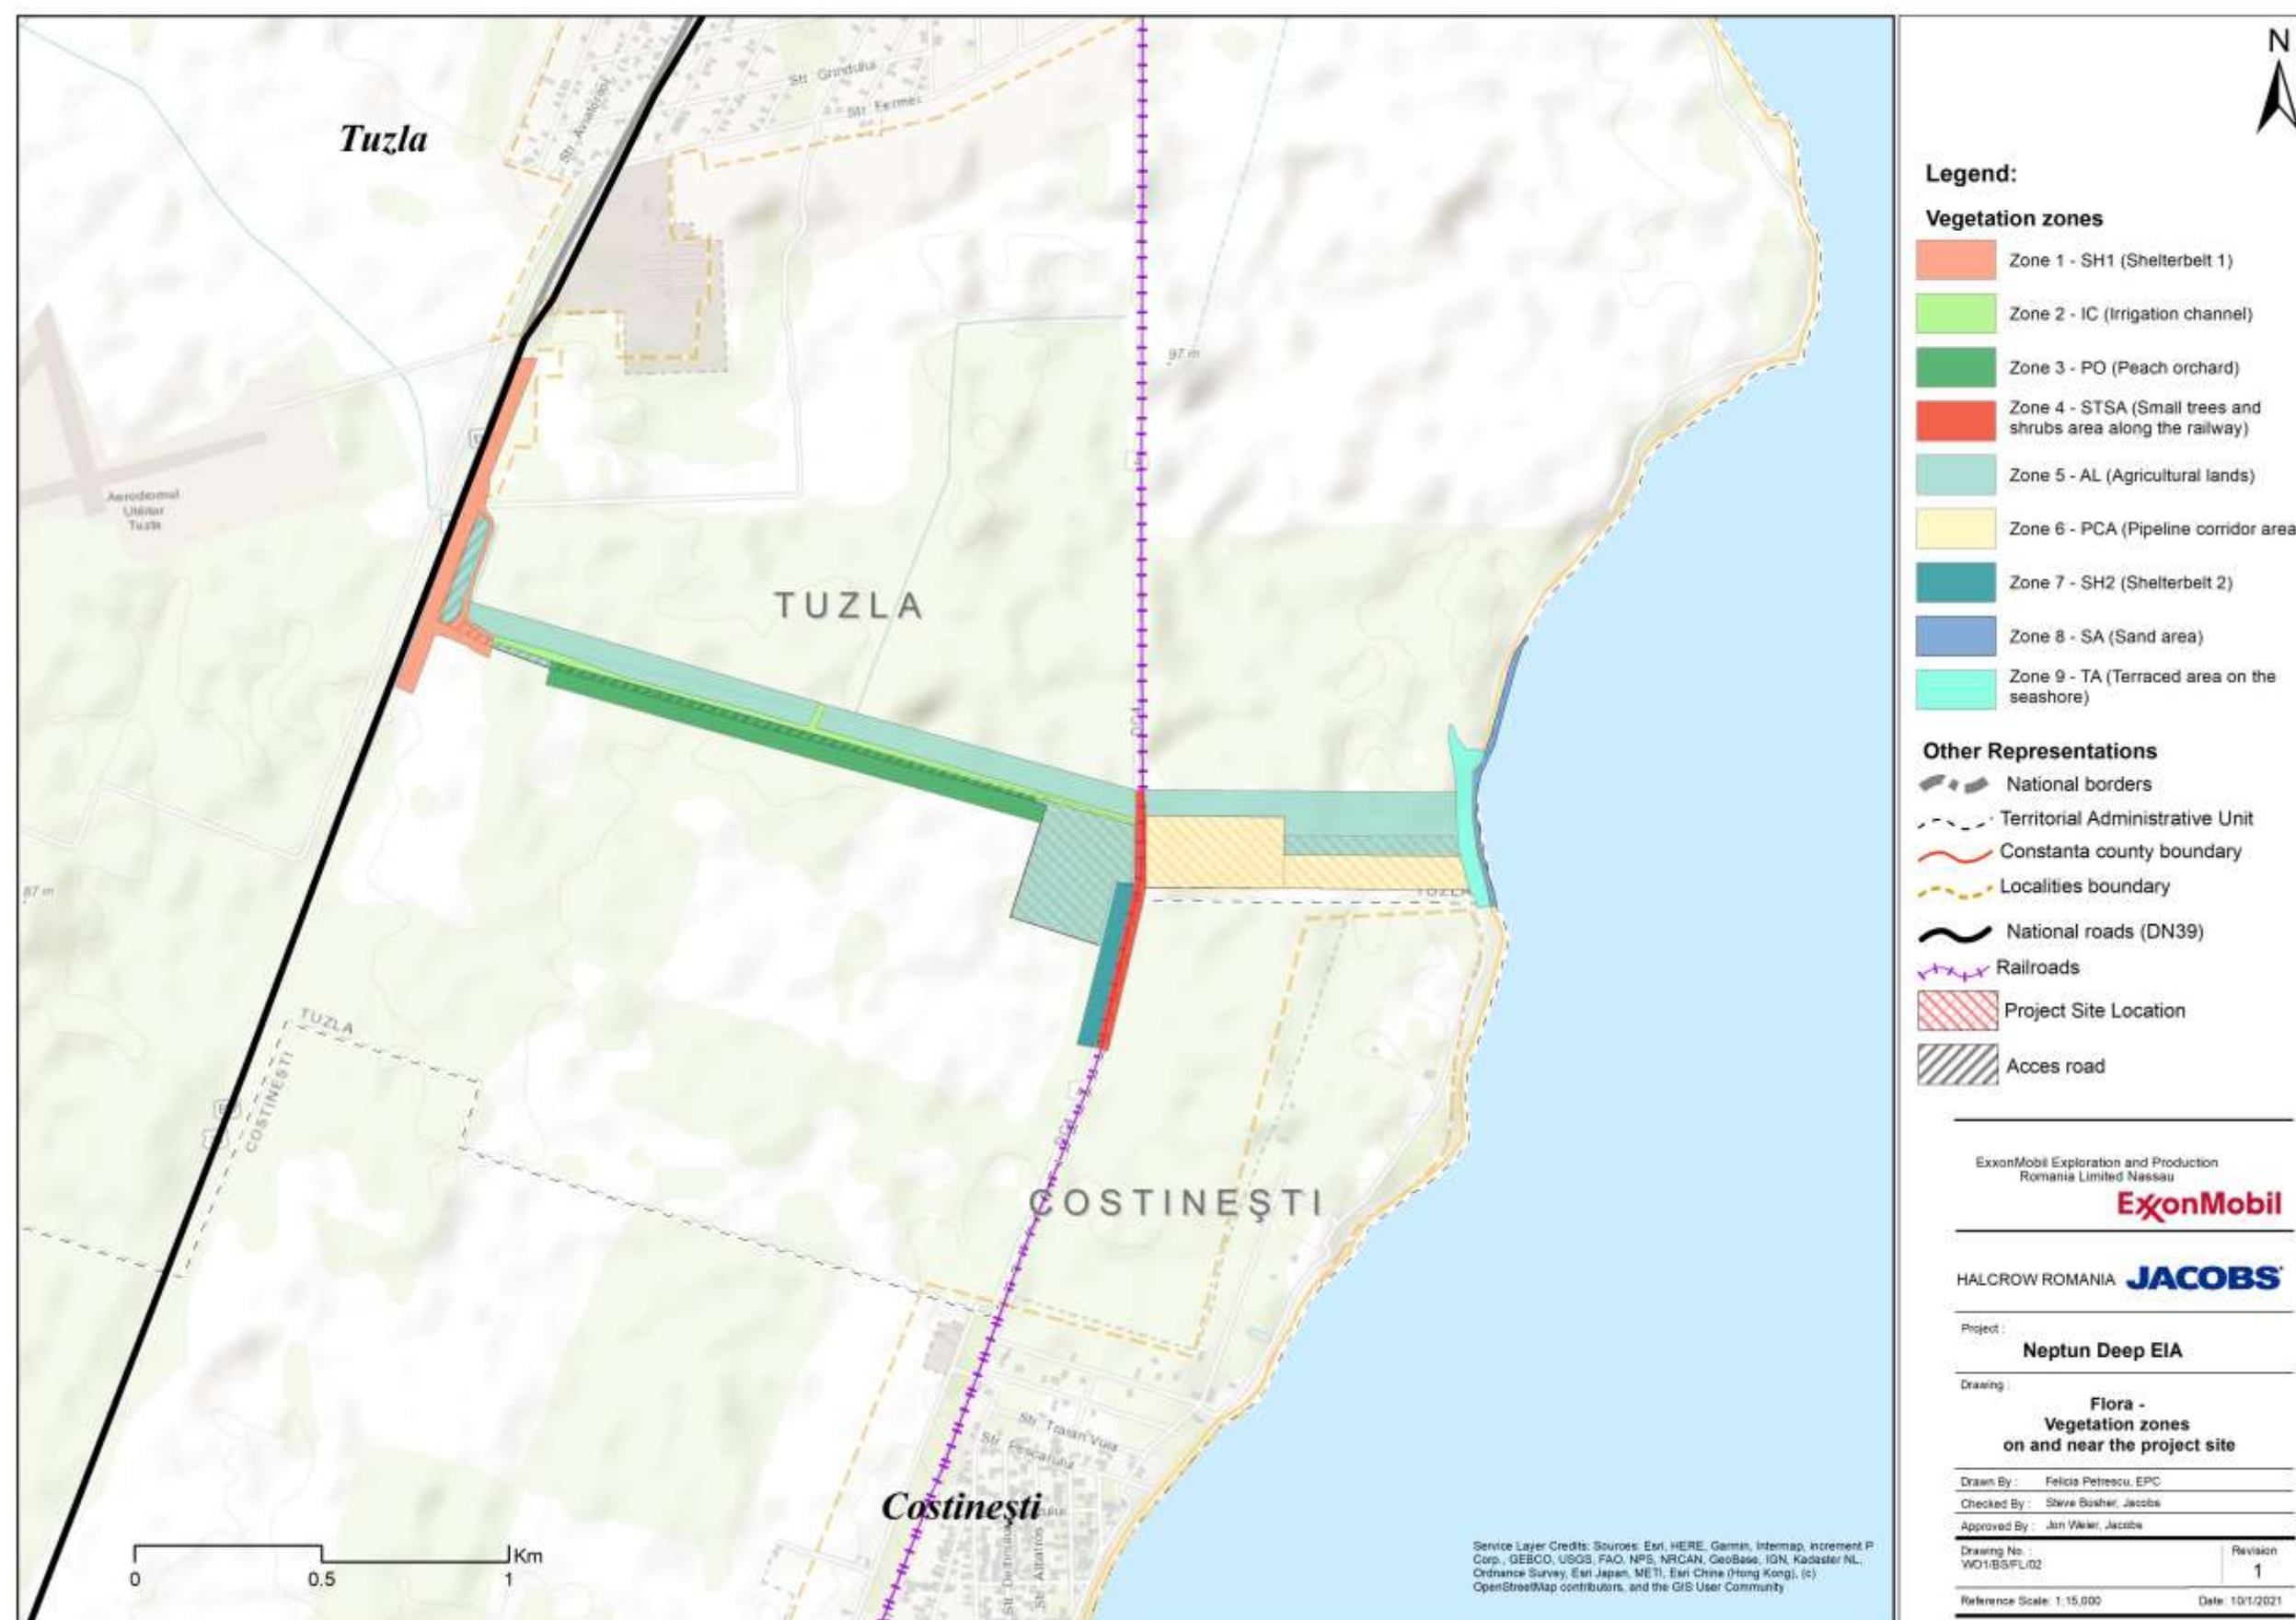

Figure 11 – Vegetation zones on and near the onshore project site analyzed during the baseline surveys

1 SH1 (Shelterbelt 1)

During the field survey, it was observed that the SH1 zone is formed mainly by arboreal and shrub species like *Acer campestre*, *Acer platanoides*, *Acer pseudoplatanus*, *Gleditsia triacanthos*, *Fraxinus angustifolia*, *Morus nigra*, *Quercus robur*, *Robinia pseudoacacia*, *Crataegus monogyna*, *Juglans regia*, *Ligustrum vulgare*, and *Prunus cerasifera*. The herbaceous layer changes depending on the season. Therefore, the observations of the prevernal flora led to the identification of the ephemeral species, like *Ranunculus ficaria* (lesser celandine) and *Muscari neglectum* which are specific to the woodland floor. Most of the observed herbaceous species were dry or in a rosette form. The vernal aspect of the flora was exemplified by species like *Geum urbanum*, *Conium maculatum*, *Veronica hederifolia*, *Cradaria draba* (observed at the edge of the shelterbelt), *Euphorbia* sp., *Asperugo procumbens*, *Valerianella locusta*, *Lamium purpureum*, and *Allium* sp.. During the estival season, the herbaceous layer was less developed due to the tree canopy. The species with the highest frequency of occurrence were *Sambucus ebulus* (herbaceous species of elder) and *Conium maculatum*.

Near the SH1 zone there is a shrub area, formed by species like *Malus domestica*, *Prunus cerasifera*, *Juglans regia*, *Rosa canina*, *Crataegus monogyna*, and *Elaeagnus angustifolia*.

2 IC (Irrigation channel)

On the IC zone the most frequent species were identified as being *Prunus cerasifera* and *Crataegus monogyna*, with rare occurrence of *Cerasus avium* and *Prunus persica*. Regarding the herbaceous layer, the species with the highest coverage were *Cardaria draba*, *Artemisia absinthium*, *Bromus sterilis*, *Euphorbia agraria*, *E. seguieriana*, *E. cyparissias*, *Rumex stenophyllus*, *Ballota nigra*, *Conium maculatum*, *Rubus caesius*, *Calamagrostis epigejos*, and *Sorghum halepense*. The *Lepidietum drabae* plant community was identified on the irrigation channel and in its vicinity, being an association specific to trodden lands, along roads, near households, and on the abandoned land (Sanda et al., 2008). On the length of the irrigation channel, the *Artemisietum absinthii* association is well developed, especially near the orchard, showing a rich organic substrate. The *Setario pumilae-Sorghetum halepensisii* plant community was also identified at the edge of the IC zone, a plant community that usually grows on cultivated lands.

The *Balloto nigrae-Malvetum sylvestris*, a ruderal association which grows on lands rich in organic content, has been identified at the beginning of the irrigation channel, located between the railway and orchard in the northern part of the future NGMS site. The *Balloto nigrae-Malvetum Sylvestris* association is characteristic to the habitat R8703 Anthropic communities with *Agropyron repens*, *Arctium lappa*, *Artemisia annua* and *Ballota nigra* (national classification) corresponding with 87.2. Ruderal communities (Palearctic classification), having a low conservation value³, which does not require conservation measures. Other characteristic associations of this habitat on and near the project site were not identified.

An invasive species with high coverage was observed in the IC zone, namely *Vitis vinifera*, which extended on the fence of the orchard and on the shrub vegetation.

3 PO (Peach orchard)

The herbaceous layer in the peach orchard (PO) is formed by ruderal species. In the estival season the dominance of *Sorghum halepense* species was observed (with a high coverage). Rarely, *Fumaria officinalis*, *Tribulus terrestris*, *Tragopogon dubius* and *Vicia narbonensis* were observed. The prevernal season in this zone has been exemplified especially by *Ornithogalum umbellatum* (grass lily). On the fence of the peach orchard and on the shrubs in this area *Vitis vinifera* has developed, with a high coverage. Also, on the fence the voluble species *Cynanchum acutum* has a high coverage. The *Setario pumilae - Sorghetum halepensi* plant community has been identified in the area, throughout the entire edge of the PO.

³ Doniță et al. (2005)

4 STSA (Small trees and shrubs area along the railway)

Vegetation with shrubs along the railway is not continuous, but mainly in the form of fragmented patches, with relatively compact vegetation only in some places. The recorded species with the highest frequency were *Crataegus monogyna*, *Rosa canina* and *Elaeagnus angustifolia* (a potentially invasive species).

5 AL (Agricultural lands)

The agricultural lands favored the development of segetal (associated with crop fields) and ruderal plants, typical for arable land or disturbed ground. Most of the identified species are annual species with rapid growth and flowering that occur at the end of a temporarily favorable season (e.g., *Atriplex patula*, *Fumaria officinalis*, *Chenopodium album*, *Polygonum aviculare*, *Heliotropium europaeus*, *Xanthium italicum*, *X. strumarium*, *Asperugo procumbens*).

The agricultural lands located in the northern part of the irrigation channel area were cultivated with sunflower (*Helianthus annuus*) and wheat (*Triticum* sp.) (observations from April 2019). On the NGMS site, the arable land was cultivated with wheat. On abandoned agricultural land, near the land cultivated with sunflower which will be bypassed by the access road that will be linked to DN 39, the *Conietum maculati* association was identified.

At the edge of the agricultural fields (as well as on the pipeline area) the invasive species *Erigeron canadensis* and *Ambrosia artemisiifolia* were observed. These species have a great potential to expand in the area.

6 PCA (Pipeline corridor area)

In the pipeline corridor area (PCA) zone the agricultural land was abandoned for almost 2 years (according to the satellite images provided by Google Earth). In August 2018 (the first month of the field surveys) spontaneous vegetation was observed on the future pipeline site. During the first months of the field surveys the entire pipeline corridor was covered with herbaceous vegetation, which provided habitat for fauna species (especially insects, small mammals, and birds). The composition of the vegetation was formed by ruderal and segetal species. Some of them are invasive, like *Erigeron canadensis* (this species had a significant coverage) and *Ambrosia artemisiifolia*. On the future pipeline site, close to the seashore terrace, the phytochoenosis changes. The number of individuals of the spontaneous species increased. *Echium vulgare*, *Centaurea diffusa*, *Stachys annua*, *Odontites vernus* and species with conservation status such as *Scolymus hispanicus* were observed.

In October 2018, the vegetation in the area corresponding to the future pipeline corridor had been ploughed. During 2019 the vegetation was partially reinstalled. Final observations made in July 2019 showed that the vegetation composition from the pipeline area was similar to the initial observations in August 2018.

The *Setario pumilae-Sorghetum halepensi* plant community identified in this zone showed the previously cultivated character of the area. Also, the *Setario pumilae-Sorghetum halepensi* association was occupying a significant area on the PCA.

7 SH2 (Shelterbelt 2)

The shelterbelt located near the site of the future NGMS is formed of plantations with *Robinia pseudoacacia*, *Laburnum anagyroides*, *Sambucus nigra*, *Juglans regia*, *Prunus cerasus*, *Elaeagnus angustifolia*, *Rosa canina*, *Gleditsia triachantos*, *Prunus cerasifera*, and *Crataegus monogyna*. Species such as *Ajuga chamaeepyris*, *Vicia narbonensis*, *Poa pratensis*, *Geum urbanum*, *Gallium humifusum*, and *Sclerochloa dura* were also identified at the edge of the shelterbelt. *Tragopogon dubius*, *Conium maculatum*, *Taraxacum officinale*, and *Agrimonia eupatoria* were also recorded in this area.

8 TA (Terraced area)

In the terraced area (TA), located towards the seashore, there were plant species observed with conservation status such as *Ecballium elaterium* and *Scolymus hispanicus* (Figure 12). These species are characteristic to R1201 Western pontic communities with *Scolymus hispanicus* and *Ecballium elaterium*, a specific habitat for Romanian territory (national classification) that has correspondence with the Palearctic classification (class 12 Sea inlets and coastal features) and the EUNIS (European Nature Information System) classification (B3. 3323 Western Pontic low cliff communities). The habitat has a moderate conservation value. The mentioned species do not form phytocenoses, only a few specimens being observed during the field surveys. Other characteristic species of this type of habitat were: *Centaurea diffusa*, *Echium italicum*, *Galium humifusum*, *Convolvulus arvensis*, and *Lolium perenne*. *Scolymus hispanicus* was also observed close to the edge of the uncultivated arable land that represents the future pipeline corridor site. The species develops better at the edge of the agricultural lands located near the terraced area.

Ecballium elaterium

Scolymus hispanicus

Scolymus hispanicus in the uncultivated arable land (red circle)

Figure 12 – Characteristic species of the R1201 habitat

In May 2019, *Cardaria draba* registered a high coverage in the TA, forming the association *Lepidietum drabae* Timár 1950 (Syn.: *Capsello-Cardarietum drabae*) Resmerita et Roman 1975. In this area, another species that also had high coverage was *Phragmites australis*. Regarding the shrubs in this area, only *Eleagnus angustifolia* was observed.

9 SA (Sand area)

On the sand area (SA) psamophilous plant communities were observed, belonging to the *CAKILETEA MARITIMAE* class, which are represented by important taxa like *Cakile maritima* subsp. *euxina*, *Crambe maritima*, *Eryngium maritimum*, *Argusia (Tournefortia) sibirica*, and *Polygonum oxyspermum* subsp. *raii* (Figure 13). Also observed, *Salsola kali* subsp. *ruthenica*, which forms vegetal communities with the previously mentioned species, and the subendemic species *Leymus racemosus* subsp. *sabulosus*. These communities are specific to the Natura 2000 habitat "1210 Annual vegetation of drift-lines", that corresponds to the habitat R1601 Communities with *Cakile maritima* subsp. *euxina* and *Argusia sibirica* (national classification). The identified plant communities do not have a high degree of coverage, being altered by the activities in the area (especially tourism and grazing).

These important taxa have a great expansion potential. For example, *Argusia sibirica* species was observed at the base of the terraced area, near the access road, between rocks and on sand, occupying small surfaces (it forms patches) (Figure 13). Also, other important species like *Eryngium maritimum*, *Salsola kali* subsp. *ruthenica* and *Crambe maritima* were frequent on the seashore, forming with *Argusia sibirica* the association *Argusietum (Tournefortietum) sibiricae* that is characteristic for the 1210 Natura 2000 habitat.

Leymus racemosus subsp. *sabulosus* was observed only in two locations on the seashore. In the first location (28.655278 N, 43.974098 E) most of the characteristic species of the 1210 habitat were found, including *Polygonum oxyspermum* subsp. *raii* (*P. mesembranicum*). In the second location (28.657363 N, 43.979278 E), which is further from the project site, beside the characteristic species of 1210 habitat, the subsponaneous species *Bassia scoparia* (*Kochia scoparia*) was also identified.

Only 3 individuals of *Cakile maritima* (also known as sea rocket) were observed on the seashore in October 2018. According to Sârbu et al. (2013) and Ciocârlan (2009), the optimal period for this species is June - September. During the field survey in June and July 2019 this species was not observed anymore.

In the SA zone only one association was observed, formed by important taxa with conservation status (*Eryngium maritimum*, *Argusia sibirica*, *Crambe maritima*, *Salsola kali* subsp. *ruthenica*, *Leymus racemosus* subsp. *sabulosus*, *Polygonum oxyspermum* subsp. *raii*).

6.1.6.1.1.2 Onshore Fauna

6.1.6.1.1.2.1 Invertebrates

The overall region of Dobrogea has been the subject of several investigations regarding invertebrate fauna. Regarding the protected species, 25 species listed in the annexes of the Habitats Directive occur in Dobrogea, namely: two dragonflies - *Coenagrion ornatum*, *Ophiogomphus cecilia* (Odonata); one bush-cricket - *Saga pedo*; two grasshoppers - *Paracaloptenus caloptenoides*, *Stenobothrus eurasius* (Orthoptera); seven coleopterans - *Bolbelasmus unicornis*, *Cerambyx cerdo*, *Lucanus cervus*, *Morimus funereus*, *Osmoderma eremita*, *Pilemia tigrina*, *Rosalia alpina* (Coleoptera); and 13 lepidopterans - *Apatura metis*, *Arytrura musculus*, *Callimorpha quadripunctaria*, *Catopta thrips*, *Eriogaster catax*, *Euphydryas maturna*, *Hyles hippophaes*, *Lycaena dispar*, *Maculinea arion*, *Pseudophilotes bavius*, *Parnassius mnemosyne*, *Proserpinus proserpina* and *Zerynthia polyxena* (Lepidoptera). However, after reviewing the relevant literature we concluded that none of these species was reported in the Tuzla - Costinești areas.

Field surveys for invertebrates were completed in accordance with the Work Plan for the Onshore Biological Environment Baseline Study, September 2018, prepared by EPC Consultanță de mediu SRL under the Neptun Deep project.

Active and passive field monitoring methods were used. Active methods consisted of choosing and delimiting visual transects that were checked daily during the study period. Passive methods consisted of trapping the

animals alive, followed by identification and release. The field survey methods used were described in the "Guide for monitoring of invertebrate species of community interest in Romania" (Iorgu, 2015).

Cumulatively, 123 invertebrate species were observed during the field surveys: two mantid species, twenty-one orthopterans, two dragonfly species, twelve ant species, forty-four coleopterans, twenty-one butterflies, twenty moths and one Mediterranean banded centipede. The complete list of species identified during the field surveys is presented in Table 25.

Table 25 – List of invertebrate species identified during the field surveys at the onshore project site

6.1.6.1.1.2.2 Reptiles and amphibians

For reptiles and amphibians, the field survey methods used were described in the “*Guide for monitoring of amphibian and reptile species of Community interest in Romania*”, elaborated in 2013. The main method employed was the transect method. The main type of transect used was the diurnal visual transect. The method aims at surveying the suitable habitats for reptiles and identifying any reptiles that are present.

Monthly field surveys for reptiles and amphibians were completed in accordance with the *Work Plan for the Onshore Biological Environment Baseline Study*, September 2018, prepared by EPC Consultanta de mediu SRL under the Neptun Deep project. The covered months were August 2018, September 2018, October 2019, March 2019, April 2019, May 2019, June 2019, and July 2019. The same methodology was used throughout the survey sessions in all months.

Reptiles

According to an article published by Cogalniceanu et al. (2013), in Romania there is a total number of 23 species of reptiles. Of these, 20 species can be found in the Dobrogea region. These are: *Emys orbicularis*, *Testudo graeca*, *Anguis fragilis*, *Eremias arguta*, *Lacerta agilis*, *Darevskia praticola*, *Lacerta trilineata*, *Lacerta viridis*, *Podarcis muralis*, *Podarcis tauricus*, *Ablepharus kitaibelii*, *Eryx jaculus*, *Coronella austriaca*, *Zamenis longissimus*, *Elaphe sauromates*, *Dolichophis caspius*, *Natrix natrix*, *Natrix tessellate*, *Vipera ammodytes* and *Vipera ursinii ssp. moldavica* (Cogalniceanu et al., 2013).

Either through observations of individuals or sign, the monthly field survey results showed the presence of *Lacerta viridis*, *Dolichophis caspius*, and *Testudo graeca* at or near the project site.

For *Lacerta viridis*, twenty-seven individuals were observed at or near the project site. Note that some observations across months could be the same individuals. In addition, there was one observation in May that was likely *Lacerta viridis* but was unconfirmed. The most observations were in the channel near the NGMS, and especially in proximity of the National Road forest. This area, which is characterized by shrubby and overgrown herbaceous vegetation, is ideal for this species.

One *Dolichophis caspius* individual was observed in the area south of the project site, near the fruit orchard and towards Costinesti. The individual was seen about 1.2 km south of the NGMS area, under a rock.

As previously noted, only a *Testudo graeca* carapace was found on the project site, in the forested area near the National Road. While there are patches of suitable habitat in the area near the project site, no live individuals were identified during the field surveys. It could be that the carapace was dropped by a bird of prey or brought from some other place by humans, but caution is recommended during construction, as the species might find areas of suitable habitat on and near the project site.

Amphibians

According to recent research by Cogalniceanu et al. (2014), the amphibian fauna of Romania comprises 19 native species, in the Anura and Urodela orders. According to Cogalniceanu et al. (2013), 12 species are found in the Dobrogea region. These are: *Triturus dobrogicus*, *Lissotriton vulgaris*, *Bombina bombina*, *Pelobates fuscus*, *Pelobates syriacus*, *Bufo bufo*, *Bufotes viridis*, *Hyla arborea*, *Rana dalmatina*, *Pelophylax lessonae*, *Pelophylax esculentus*, and *Pelophylax ridibundus*.

The only species identified inside the project site and in its vicinity was *Bufotes viridis*. A total of 25 individuals were observed throughout the survey sessions.

The greatest number of observations were near the NGMS forest and on the road from the NGMS to the shoreline. Observations were also made near the project site, especially near the seashore and in the neighboring agricultural fields. It is important to note that these observations could also be of importance for

the project, as *Bufo* species can have a rather high level of mobility, some sources citing a maximum of 2.5 ha (for *Bufo bufo*, a species related to *Bufo viridis*) (Daversa et al., 2012).

6.1.6.1.1.2.3 Birds

At and near the project site, the **bird** community is represented by dry land species (diurnal and nocturnal) and aquatic marine species. They include sedentary and migratory species (summer guests, winter guests, passage species) and some are of community and/ or national interest.

Field observations of each bird typology involves specific, dedicated methods that can provide the appropriate information to characterize the degree of presence and land use, distribution, population size and understand the favorability of the project site as a feeding/ breeding/ nesting/ migrating area for each group.

Two methods were used to fulfil the scope of the survey: the longitudinal transect method for acquiring data on species using the project site (resident, summer guests, winter guests) and fixed-point method especially for migratory species.

During the monitoring of the avifauna at and near the project site from August 2018 – July 2019, 117 species of birds were identified (Table 26). The table also include information on the conservation status of the bird species observed at and near the project site from August 2018 – July 2019.

Notes:

Phenological status: OV – Summer guest, AC – Accidental species, RI – Species present rarely during the winter, MP – Partially migratory species, OI – Winter guest, P – Species present only during passage/migration, S – Sedentary/ resident species.

IUCN Red List: LC – Least Concern, NT – Near Threatened, VU – Vulnerable, EN – Endangered.

Birds Directive (Directive 2009/147/EC on the conservation of wild birds): I – Annex I Species subject of special conservation measures; IIA – Annex IIA Species that may be hunted in the geographical sea and land area where the Directive applies; IIB – Annex IIB Species that may be hunted only in the Member States in respect of which they are indicated.

Bern Convention (Convention on the Conservation of European Wildlife and Natural Habitats): II – Appendix II Strictly protected fauna species; III – Appendix III Protected fauna species.

Bonn Convention (Convention on the Conservation of Migratory Species of Wild Animals): I – Appendix I Endangered migratory species; II – Appendix II Migratory species conserved through Agreements.

6.1.6.1.1.2.4 Bats

Romania harbors 32 bat species of which 29 are found in Dobrogea. Their ecology involves forming small or large colonies for hibernation during the cold season and nursing colonies (formed by females) from May to August, after which they reunite, mate and hibernate. During the spring and autumn periods, colonies tend to change their roosts for more suitable nursing or hibernation locations. Nursing sites are chosen based on food availability and optimal shelters for pups, while hibernacula are chosen based on their temperature range, temperature variation (which needs to be low and constant), group safety, and general climatic conditions (with lower temperature variations during the cold season, compared to nurseries (Murariu, Chișamera, Măntoiu, & Pocora, 2016).

Within the project site, the natural landscape does not offer varied suitable roosting sites, with some small exceptions of loess or limestone cliffs (the Black Sea coast, but only specific cliffs) which are beginning to be altered to stop sea and wind erosion. Nearby forested areas offer little support for bat colonies. They have young trees and a low number of poorly developed tree hollows, which are essential for forest dwelling bats. No bats were found in the tree searches for roosts. The anthropic roosts are the closest potential colony locations for migratory bats which hunt in the open spaces of the project site. Bat home ranges stretch out to 15 - 20 km²/night, but this area is measured around the roost in potential habitats optimal for each species. The closest distance from the project site to a bat roost of national importance is 20.8 km (Limanu Cave, located near Limanu village), and may represent a large enough distance so that rare species like *Miniopterus schreibersii* will not likely cross the project site during feeding, dispersion, or migration. The species shows a regional migratory behavior, but colonies roosting in the southern part of Dobrogea are present only during the hot period and usually migrate into the Bulgarian karst for hibernation.

Bats are a group of species that are difficult to observe by traditional methods. Field work was focused on identifying bats at and near the project site via ultrasound transects and light searches. Transects were performed during the spring, maternity, swarming, and reproduction periods, in clear sky nights, starting 30 minutes before sunset and continuing to the next day until 1 AM, when bat activity significantly decreases due to their feeding behavior.

The identified species on site were mostly represented by *Pipistrellus nathusii/kuhlui*. The differentiation between *P. nathusii* and *P. kuhlui* is still considered unreliable from ultrasounds alone, therefore the two species are treated as a group. The observations are more likely to be *P. nathusii* given that the species' ecology and habitat preference more align with the open spaces present at and near the project site. The *Nyctalus* species were more abundant during August and September, which may have been indicative of migration through the study area.

Migratory bat species

The project site and areas within 5 km are poorly represented in terms of bat fauna research, given that most of the work has been conducted in historically or nationally important roosts within Dobrogea. A spatial compilation of all the research identified in the study area (25 km from the onshore pipeline metering and custody transfer station) has been synthesized in recent years (Murariu, Chișamera, Măntoiu, & Pocora, 2016). This includes the EPC Consultanță de mediu species' database, which was developed via another project-based research. Results from the ultrasound study performed for the proposed project were added. The intersection of these spatial databases with the study area yielded the presence of 20 bat species of which 5 are migratory (Table 27).

Table 27 - Species list and abundance of migratory bats* in the study area

No.	Migratory species	Hagieni Tunnel (no. individuals)	Limanu Cave (no. individuals)	No. of Bioacoustics Observations – 25 km Study Area (outside of the Project Site)	No. of Bioacoustics Observations – Project Site
1	<i>Miniopterus schreibersii</i>	664	1	-	-
2	<i>Nyctalus leisleri</i>	-	-	2	3
3	<i>Nyctalus noctula</i>	-	-	4	19
4	<i>Pipistrellus nathusii/kuhlii</i>	-	-	117	282
5	<i>Vespertilio murinus</i>	-	-	1	-

Notes: * Sightings performed via bioacoustics cannot be treated as number of individuals and are generically marked as 1 per recording. The no. of bioacoustics observations at and near the project site have been performed especially for this project, while the no. of observations in the study area were collected from prior projects and databases and do not contain information from the project site.

The observations were made using roost searches and ultrasound monitoring. Of the 5 migratory bat species, one was found roosting in an abandoned mine (Hagieni Tunnel) and a natural cave system (Limanu Cave). The other 4 were identified via *ultrasounds* in flight.

Sedentary bat species

The intersection of the literature review spatial database within the study area and the results obtained by the ultrasound study performed at and near the project site yielded the presence of 15 sedentary bat species, as shown in Table 28.

Table 28 - Species list and abundance from the literature review and project site field survey of the sedentary bats in the study area

No.	Sedentary species	Hagieni Tunnel	Buildings	Limanu Cave	No. of Bioacoustics Observations – 25 km Study Area (outside of the Project Site)	No. of Bioacoustics Observations – Project Site
1	<i>Eptesicus serotinus</i>	-	-	1	1	-
2	<i>Hypsugo savii</i>	-	-	-	1	-
3	<i>Myotis capaccinii</i>	1	-	-	-	-
4	<i>Myotis daubentonii</i>	10	--	100	-	-
5	<i>Myotis emarginatus</i>	6	-	-	-	-
6	<i>Myotis myotis</i>	-	-	1	-	-
7	<i>Myotis mystacinus</i>	-	-	1	-	-
8	<i>Pipistrellus kuhlii</i>	-	432	-	6	-
9	<i>Pipistrellus pipistrellus</i>	-	-	-	2	1
10	<i>Pipistrellus pygmaeus</i>	-	-	-	1	-
11	<i>Plecotus auritus</i>	2	1	1	-	-
12	<i>Plecotus austriacus</i>	-	-	1	-	-
13	<i>Rhinolophus ferrumequinum</i>	2	-	64	3	-
14	<i>Rhinolophus hipposideros</i>	1	-	26	-	-
15	<i>Rhinolophus mehelyi</i>	1	-	80	-	-

Notes: * Sightings performed via bioacoustics cannot be treated as number of individuals and are generically marked as 1 per recording. The no. of bioacoustics observations at and near the project site have been performed especially for this project, while the no. of observations in the study area were collected from prior projects and databases and do not contain information from the project site.

The observations were made using both roost searches and ultrasound monitoring. Of the 15 sedentary bat species, 7 were found roosting in an abandoned mine (Hagieni Tunnel), 9 in a natural cave system (Limanu Cave), 2 in buildings (Constanța City) and 14 were identified via ultrasounds in flight.

6.1.6.1.1.2.5 Mammals (other than bats)

Different studies on the mammals from Dobrogea dealt with subjects such as: ecological observations on small mammals from Valu lui Traian (Ausländer and Hellwing, 1957a; Hellwing and Schnapp, 1960; Schnapp, 1968); variability and biology of the species *Sicista subtilis* (Ausländer and Hellwing, 1957b); rodents from northwest Dobrogea (Popescu, 1968); food of *Meles meles* (Popescu and Sin, 1968); distribution and scientific and practical importance of the mammals of Dobrogea (Marches, 1970); and novel fauna in Southern Dobrogea (Iana, 1970).

A mammal species distribution database in Dobrogea region does not exist, despite the numerous studies noted above. In the last twenty years, only papers compiling distributions of a single species have been published, such as: *Mesocricetus newtoni* (Hamar and Schutowa, 1966); *Martes foina* (Cuzic and Marinov, 2002; Kiss et al., 2012b, 2014), *Castor fiber* (Kiss et al., 2012a, 2014), *Canis lupus* (Kiss, 2004), *Martes martes* (Kiss et al., 2012c, 2013, 2014), *Mustela lutreola* (Cuzic and Marinov, 2004), *Sicista nordmanni* (Ausländer and Hellwing, 1957b); or papers addressing a particular restricted geographic area (Ausländer and Hellwing, 1957a; Hellwing and Schnapp, 1960; Iana, 1970; Marches, 1970; Popescu, 1968; Răduleț and Stănescu, 1996; Chiriac and Barbu, 1962; Marches et al., 1954; Murariu, 1996, 2006; Cuzic and Cuzic, 2008).

Monthly field surveys for mammal species during the period August 2018 - July 2019 were completed in accordance with the *Work Plan for the Onshore Biological Environment Baseline Study*, September 2018, prepared by EPC Consultanță de mediu SRL under the Neptun Deep project. Any observed individuals and any signs of presence, consisting of excrements, distinguishable tracks or used galleries (dens), were marked by GPS and photographed. Another method used during the field surveys was camera trapping. An additional method applied on a limited number of 2019 of field survey days was the live-trapping (pitfall traps) method.

25 terrestrial mammal species were identified by observation and/or signs at or near the project site (Table 29). Four of the identified species (i.e., *Mesocricetus newtoni*, *Spermophilus citellus*, *Mustela eversmanii*, *Cricetus cricetus*) are species of community interest and one of the identified species (*Nannospalax leucodon*) is a species of national interest.

Overall, the best mammal habitats identified were the patches of natural vegetation near the project site, but the project site and the surrounding agricultural fields also represent favorable habitats for several species, especially rodents. Dens of *Meles meles*, *Vulpes vulpes* and *Canis aureus* were identified on the irrigation channels located along the project site and in the area of the orchard. Also, numerous galleries of rodent species and species belonging to the order Eulipotyphla were identified at and near the project site.

Table 29 - List of mammal species identified during the field surveys on and near the project site

No.	Order	Scientific name	Common name
1.	Eulipotyphla	<i>Erinaceus roumanicus</i>	Northern White-breasted Hedgehog
2.		<i>Crocidura leucodon</i>	Bicoloured White-toothed Shrew
3.		<i>Sorex araneus</i>	Common Shrew
4.		<i>Talpa europaea</i>	European Mole
5.	Rodentia	<i>Mesocricetus newtoni</i>	Romanian Hamster
6.		<i>Cricetus cricetus</i>	Common Hamster
7.		<i>Mus musculus</i>	House Mouse
8.		<i>Mus spicilegus</i>	Steppe Mouse
9.		<i>Rattus norvegicus</i>	Brown Rat
10.		<i>Apodemus sylvaticus</i>	Wood Mouse

No.	Order	Scientific name	Common name
11.		<i>Apodemus</i> sp.	-
12.		<i>Microtus arvalis</i>	Common Vole
13.		<i>Microtus levis</i>	East European Vole
14.		<i>Microtus</i> sp.	-
15.		<i>Spermophilus citellus</i>	European Ground Squirrel
16.		<i>Nannospalax leucodon</i>	Lesser Blind Mole Rat
17.	Lagomorpha	<i>Lepus europaeus</i>	European Hare (Brown Hare)
18.	Carnivora	<i>Martes foina</i>	Stone Marten
19.		<i>Vulpes vulpes</i>	Red Fox
20.		<i>Meles meles</i>	European Badger
21.		<i>Canis aureus</i>	Golden Jackal
22.		<i>Mustela eversmanii</i>	Steppe Polecat
23.		<i>Mustela putorius</i>	European Polecat
24.	Cetartiodactyla	<i>Phocoena phocoena</i> *	Common Porpoise
25.		<i>Delphinus delphis</i> *	Short-beaked Common Dolphin
26.		<i>Sus scrofa</i>	Wild Boar
27.		<i>Capreolus capreolus</i>	European Roe Deer

Note:

* Marine species. Both dolphin species (Common Porpoise - *Phocoena phocoena* and Short-beaked Common Dolphin - *Delphinus delphis*) have been observed in the coastal area (terrestrial) and consisted of skeletal remains. The remains were brought by different mesocarnivorous mammals from the seashore.

6.1.6.1.2 Offshore

The information presented in this section is based on data / samples collected in the field in the project area (in the coastal and offshore areas).

The data / samples are collected by NIMRD "Grigore Antipa" within the research and monitoring activities carried out for:

- National Marine Monitoring Program (for the implementation of the MSFD and Habitat Directives);
- Romanian annual report on the national data collection program for fisheries;
- Scientific research projects;
- Marine environment monitoring program during drilling campaigns executed in the Neptun block during 2012-2015;
- Dedicated baseline environmental study carried out along the pipeline route and the location of the SWP and wells, conducted in 2017 and 2021;
- Study on habitats and benthic species carried out along the pipeline route in 2021;
- Scientific research papers and reports of the projects carried out in the project area;
- NIMRD "Grigore Antipa" databases containing information on biological parameters covering the period 2010-2018.

6.1.6.1.2.1 Marine zones

Marine benthic zones identified in the area of Neptun Deep project, as defined and recognized by EUNIS are (Figure 14):

- **Littoral** – defined as the shore area, where periodic exposure and submersion by tides is normal, or in micro-tidal marine ecosystems (such as the Black Sea), habitats which are normally water-covered, but intermittently exposed due to the action of wind or atmospheric pressure changes (as hydro littoral). It can include the splash zone, rockpools and (relatively) waterlogged saltmarshes (soft substrata) and saline brackish pools found in the supralittoral zone above the mean water level in non-tidal waters. The littoral zone comprises the supralittoral and midlittoral system. The project coastal area is represented both as sedimentary and rocky substrata with specific flora and fauna associations.
- **Infralittoral** – defined as the zone where there is sufficient light for green algae and vascular plants such as *Zostera* spp to grow and be dominant. The lower limit has traditionally been considered to coincide with 1% light penetration. The limit of the resistance of photophilic algae and *Zostera* spp vary with the latitude and water turbidity. Off Romanian coasts, this zone ranges between 0.5 and 12 m depth, due to the Danube inflow of fine sediments. The project also crosses the infralittoral zone.
- **Circalittoral** – defined as sub-tidal or non-tidal waters with insufficient light penetration for vascular plants and photophilic (green) algae to grow, but red and brown algae can also grow, and they may be dominant, although usually this zone is dominated by fauna. The light penetration, which coincides with the lower limit of the circalittoral, and which is marked by the growth limit of red crustose coralline algae, varies between authors and studies, but is typically 0.01% or lower. Considering the high turbidity of the Black Sea, especially in its north-western part, the lower limit of the circalittoral cannot be considered by phytal gradient. Therefore, taking into consideration the physical and chemical peculiarities of the Black Sea, the lower limit of the circalittoral is defined as between 100 and 120 m, meaning the lower limit where the *Modiolula phaseolina* community presents its typical characteristics with the occurrence of living adults. A more recent classification splits the circalittoral according to phytal / hydrodynamic gradients into circalittoral and offshore circalittoral. Thus, the offshore circalittoral (in some classifications called "deep circalittoral" or "deep shelf") is characterized by insufficient light for photosynthesis and little variation in temperature. In Romanian waters, the upper circalittoral is characterized by the occurrence of the mussel *Mytilus galloprovincialis* at depths between 25-60m and the lower circalittoral by the *Modiolula phaseolina* community from 60 to 100-120m, as mentioned above. Both types of circalittoral are found in the Project area.
- **Bathyal** – zone corresponds to the continental slope between the edge of continental shelf (typically at 180 – 200 m depth) and the abyssal plain. The "shelf break" is typically at 180 – 200 m depth. This zone has been divided into upper and lower bathyal. Recently the bathyal zone is defined as the oceanic zone at depths of 200-2000 m, lying to seaward of the shallower neritic zone, and landward of the deeper abyssal zone. The upper limit of the bathyal zone is marked by the edge of the continental shelf. In marine ecology, it is the region of the continental slope and rise, which can be geologically active, and includes trenches and submarine canyons, with underwater erosion producing avalanches. In the Black Sea, the upper bathyal has been found to be populated by deep-water fauna, but the deeper zones have been found to be azoic (without life). Therefore, in the Black Sea the upper bathyal is defined as the periazoic zone, which is a characteristic of the Black Sea. The project pipeline itself does not cross the bathyal zone.
- **Periazoic** – zone occupies the external margin of the continental shelf in the Black Sea and, in some places, where the shelf is narrowing, even the upper portion of the continental slope. From a biological point of view, this zone supports an atypical community of *Modiolula phaseolina*, with rare and only juvenile individuals in its upper layer, or a community without molluscs, and a lower layer with *Bougainvillia*, which become scarcer with increasing depth.

- **Abyssal** – the zone is the plain below the continental shelf. In the Black Sea, the lower bathyal and abyssal zones are completely azoic.

Marine pelagic zone spans through the whole water column and it is the largest habitat from the Black Sea. This habitat is dependent on the river inputs and the movements of water masses and the complex interactions between biological and physical processes. Plankton communities as phytoplankton and zooplankton constitute an important component of such habitats. Plankton species have fast turn-over rates and therefore respond quickly to changes in the environment. Moreover, plankton plays an important role in the functioning of marine ecosystems and in biogeochemical cycles because they are a key component of the trophodynamics of pelagic ecosystems. The communities' composition provides a good indication of the status of pelagic ecosystems, responding to a variety of pressures, in particular nutrient enrichment, NIS, alteration in hydrographical conditions and contaminants.

Black Sea habitats around offshore project site location are presented in Figure 15.

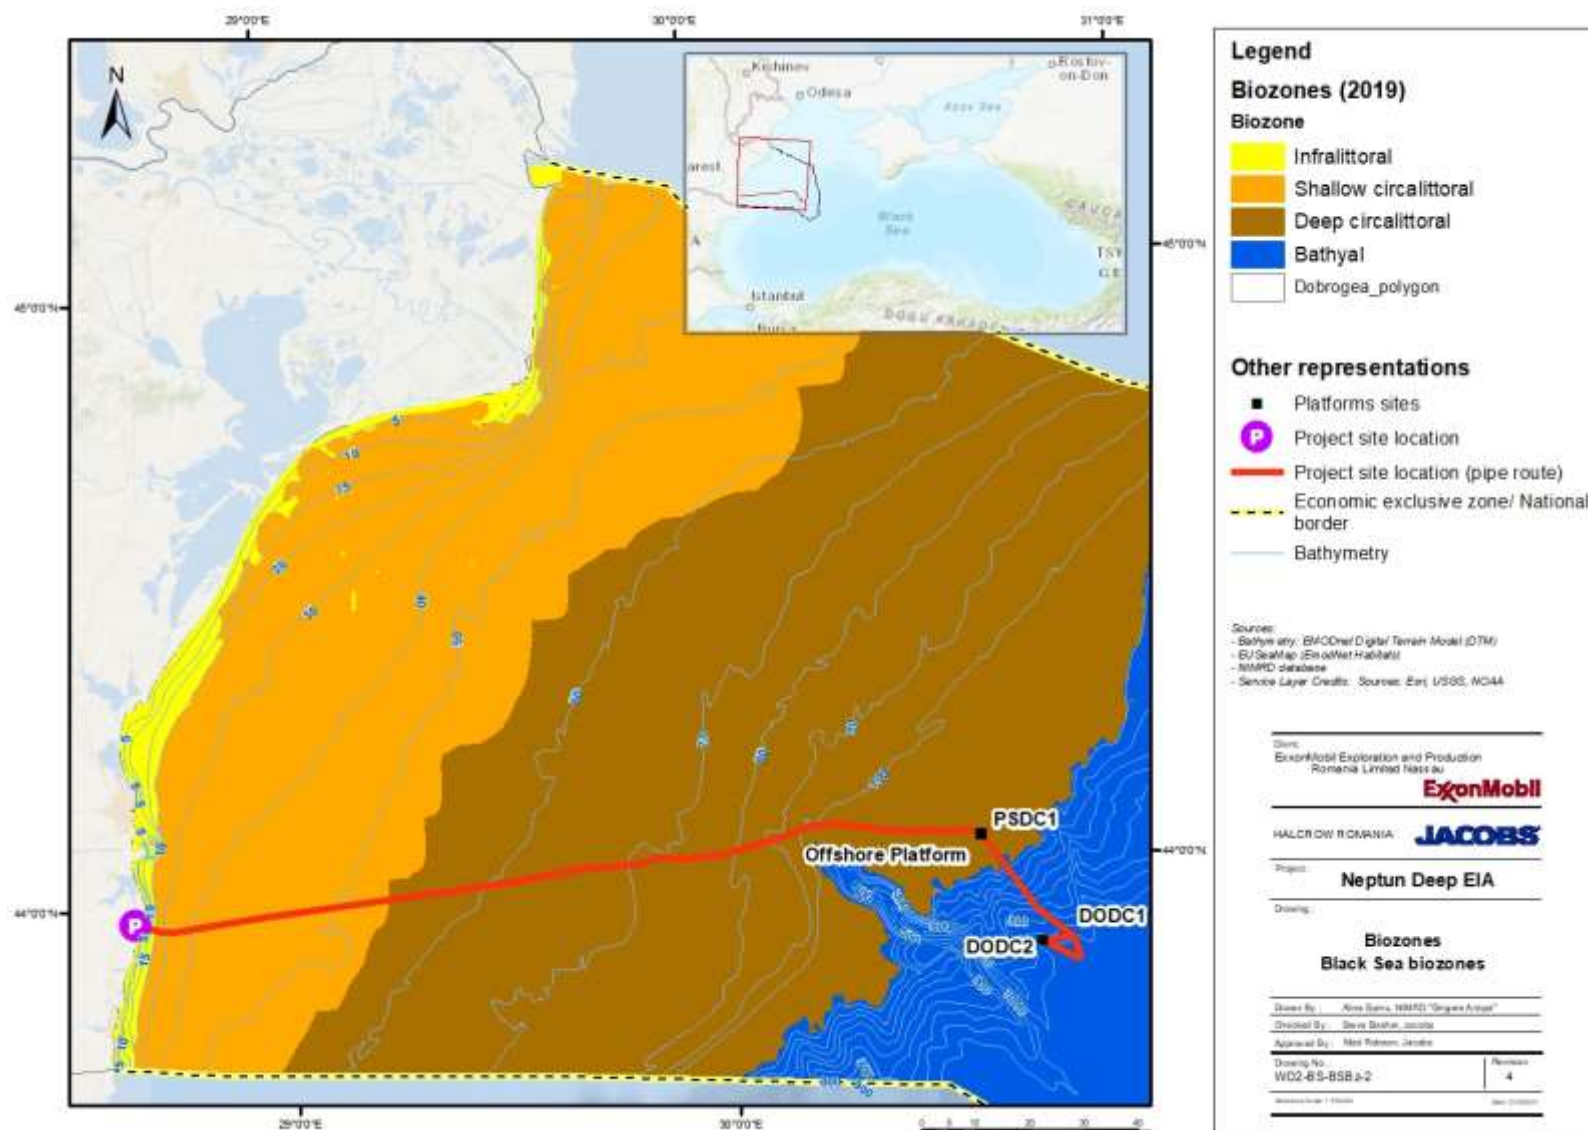

Figure 14 - Marine benthic zones around project location

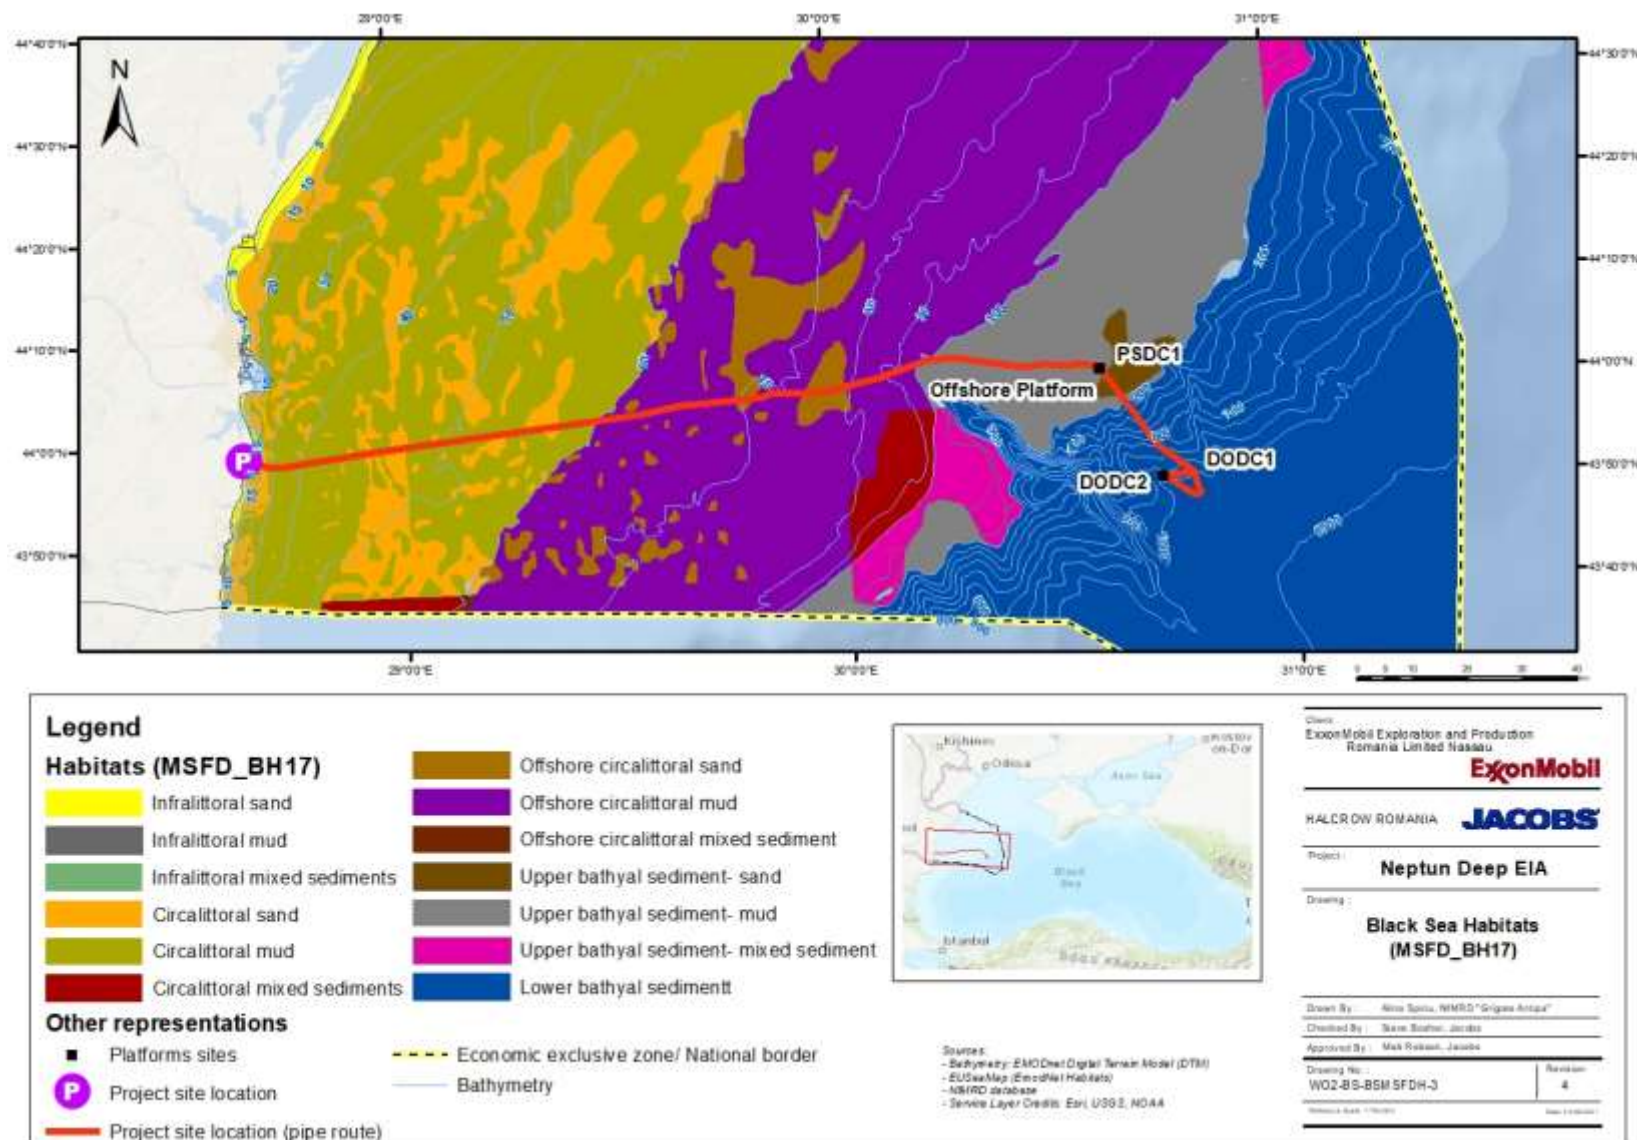

Figure 15 - Marine habitats around project location

6.1.6.1.2.2 Planktonic community

6.1.6.1.2.2.1 Phytoplankton

Phytoplankton or microalgae are autotrophic organisms, able to fix solar energy through the process of photosynthesis, and with the help of chlorophyll and carotenoid pigments, transform the inorganic chemicals into a complex of organic substances, the result being the production of carbohydrates, proteins, fats, carbon dioxide and water.

Due to this property, phytoplankton organisms are primary producers, the autotrophic species being the main source of organic matter in marine basins. The entire biological production of a body of water will depend on the value of this source, the phytoplankton being the first link of the trophic chain, which is the basic food for all consumers found at higher trophic levels such as zooplankton and fish.

From a taxonomic point of view, the main groups of marine phytoplankton are diatoms, dinoflagellates, euglenophytes, cyanobacteria, chrysophytes and cryptophytes. In the Black Sea, the phytoplankton includes about 750 species, 100 of which are benthic-planktonic diatoms. The diversity of pelagic phytocenoses depends on salinity, temperature, nutrients, and hydrodynamics (influencing mixing), which distinguish deep-sea pelagic areas, shallow areas, coastal lagoons and estuaries.

For the identification of all key phytoplankton species that could potentially be located within the Project area, this area was divided into:

- Coastal waters (between 5 and 20 m water depth);
- Marine waters (between 20 and 100 m water depth);
- Offshore waters: (from 100 to 1000 m water depth).

A total of 150 phytoplankton species were identified within the Neptun Deep Project area. The highest diversity was found in the offshore waters (136 species) and the lowest in coastal waters (40 species). In the marine waters, 84 species were found. Dinoflagellates were the dominant group representing 44-47.6 % of the total number of species identified in all the Project area. The diatoms were the second most abundant group within the community with 25-28.6% of the total number of species found within the Project area. The chlorophytes ranked third in the phytoplankton community structure, comprising a maximum of 10.6% of species in offshore waters. The remaining groups (e.g., cyanobacteria, chrysophytes, cryptophytes and euglenophytes) had a lower diversity representing between one and seven percent of species with a maximum of 10-15 species in offshore waters. Taxonomic composition of the phytoplankton communities during 2015-2016 in the project area is presented In Figure 16.

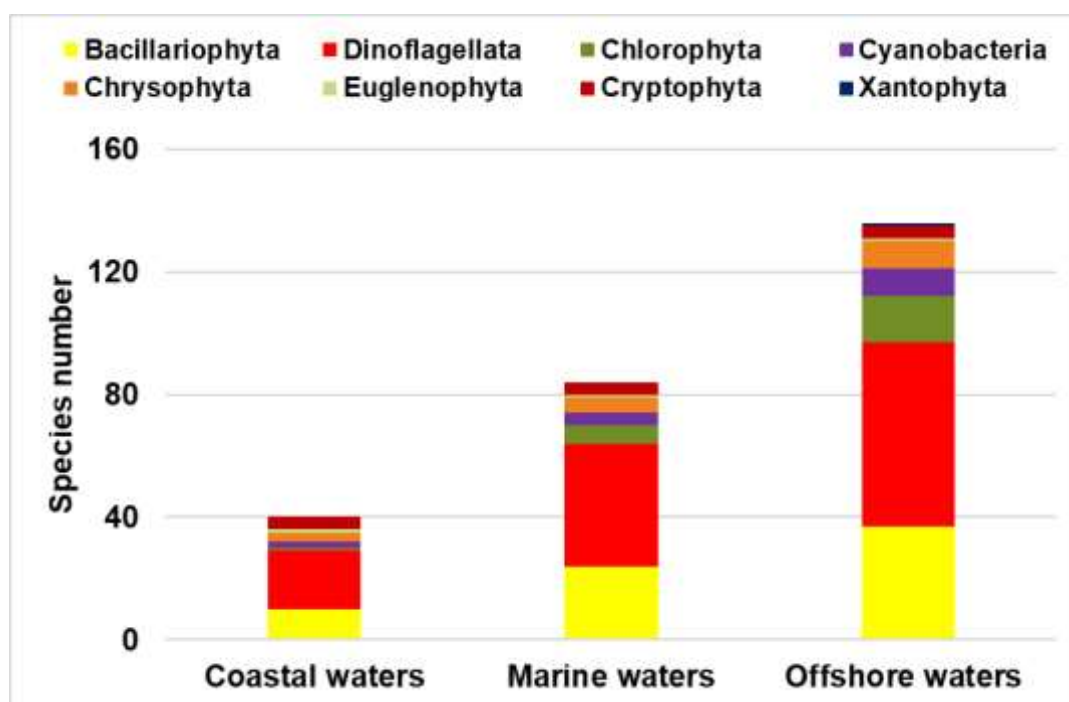

Figure 16 - Taxonomic composition of the phytoplankton communities during 2015-2016 in the project area

6.1.6.1.2.2.2 Zooplankton

Zooplankton encompasses an array of microscopic animals and comprise representatives of almost all major taxa, particularly the invertebrates, that passively drift in the water column. Zooplankton represents an important trophic link in the marine food web, connecting the primary producers with the consumers at higher levels. Zooplankton play a role in controlling the population of the phytoplankton while also serving as food for a variety of larger pelagic organisms including fish.

In general, there is a uniformity in zooplankton community structure with seasonal changes of peculiar species association. Zooplankton taxonomic composition is comprising mainly of copepods, cladocerans, meroplanktonic larvae of benthic invertebrates, *Noctiluca scintillans* a pigment-less dinoflagellate alga and gelatinous species.

Based on the data collected, in the project area a total number of 31 species were described (Table 30).

Table 30 - List of zooplankton species identified in Neptun Deep Project area

No	Taxon
1	<i>Noctiluca scintillans</i> (Macart.) Kof. & Sw.
2	Polychaeta (larvae)
3	<i>Bosmina (Bosmina) longirostris</i> (O. F. Müller, 1785)
4	<i>Chydorus sphaericus</i> (O.F. Müller, 1785)
5	<i>Daphnia longispina</i> O.F. Müller, 1785
6	<i>Evadne spinifera</i> O.F. Müller, 1867
7	<i>Penilia avirostris</i> Dana, 1849
8	<i>Pleopis polyphemoides</i> (Leucart, 1859)
9	<i>Pseudevadne tergestina</i> (Claus, 1877)
10	<i>Acartia (Acartiura) clausi</i> Giesbrecht, 1889
11	<i>Anomalocera patersoni</i> Templeton, 1837
12	<i>Calanus euxinus</i> Hulsemann, 1991
13	<i>Centropages ponticus</i> Karavaev, 1895

No	Taxon
14	<i>Paracalanus parvus</i> (Claus, 1863)
15	<i>Pontella mediterranea</i> (Claus, 1863)
16	<i>Pseudocalanus elongatus</i> (Boeck, 1872)
17	<i>Oithona similis</i> Claus, 1863
18	<i>Oithona davisae</i> Ferrari F.D. and Orsi, 1984
19	<i>Harpacticoida</i> sp.
20	Cirripedia (larvae: nauplia, cypris)
21	Decapoda (larvae: zoea, megalopa)

23	Gastropoda (larvae)
24	Bivalvia (larvae)
25	<i>Parasagitta setosa</i> (Müller, 1847)
26	<i>Oikopleura (Vexillaria) dioica</i> Fol, 1872
27	<i>Aurelia aurita</i> (Linnaeus, 1758)
28	<i>Rhizostoma pulmo</i> (Macri, 1778)
29	<i>Beroe ovata</i> (Bruguère, 1789)
30	<i>Mnemiopsis leidyi</i> (A. Agassiz, 1865)
31	<i>Pleurobrachia pileus</i> (O. F. Müller, 1776)

6.1.6.1.2.2.1 Benthic flora

The benthic flora or macrophytobenthos refers to large plants (macrophytes) growing on the seabed and comprises macroalgae (seaweeds) and the seagrasses (marine vascular plants). These large primary producers are an essential part of marine ecosystems, creating substrates and habitats for other marine organisms. Together with phytoplankton, macrophytobenthos contribute to nutrient cycling and primary production of marine ecosystems. Their sensitivity to changes in environmental conditions and their ability to concentrate chemical elements from the environment make them useful bio indicators of pollution. It is considered that long-term changes in the status of water bodies can be detected by monitoring marine plant communities.

Macrophytes are among the first organisms to respond to deterioration in marine environmental conditions; through diversity decrease and change in structure of macroalgae and seagrass communities.

Macrophytes are attached organisms, inhabiting coastal biotopes and many can withstand anthropogenic impacts within the coastal zone. Some species have long life cycles and others are relatively fast growing. Besides opportunistic species, there are also large dominant species, which form an indicatory community for the quality of the marine environment such as those belonging to *Cystoseira*, *Zostera*, and *Phyllophora* genera.

The macroalgae are a unique domain able to maintain the ecological balance in the marine coastal environment. The widespread reduction and disappearance of algal species over recent decades in the Black Sea due to the influence of anthropogenic pressures, caused a disruption of the function of marine coastal ecosystems and their food chains, reduction of the zoobenthic communities, including various fish species.

Over recent decades along the Romanian Black Sea shore, the phytobenthic communities have suffered a serious decline as a result of the cumulative action of some unfavorable natural and anthropogenic factors.

Benthic flora in the Project area is dominated by opportunistic, fast growing macroalgal species, but historically more sensitive, perennial species were present (macroalgae and marine phanerogams), which have since disappeared. The nearest presence of *Cystoseira*, is 17 km to the south of the Project area, *Zostera* 18 km to the south and *Phyllophora* at 25 km to the north.

In the Project area the dominant species of flora are the opportunistic macroalgal species. The dominant taxa are the green algae, especially the photophilic association *Ulva - Cladophora*. The species identified in the past years within the Project area are presented in Table 31. The areas were characterized by the exclusive presence of macroalgal species with a fast-developmental cycle and a high reproductive capacity.

Table 31 - Macroalgae species identified along Eforie Sud – Tuzla – Costinesti during 2015 – 2018

Phyllum	Macroalgae species	Eforie Sud	Tuzla	Costinesti
Chlorophyta	<i>Cladophora albida</i>			*
	<i>Cladophora sericea</i>	*	*	
	<i>Cladophora vagabunda</i>	*	*	*
	<i>Ulva intestinalis</i>	*	*	*
	<i>Ulva flexuosa</i>	*		
	<i>Ulva rigida</i>	*	*	*
Rhodophyta	<i>Callithamnion corymbosum</i>		*	
	<i>Ceramium diaphanum</i> var. <i>elegans</i>	*	*	*
	<i>Ceramium virgatum</i>	*	*	*
	<i>Polysiphonia denudata</i>	*		

6.1.6.1.2.2.2 Benthic fauna

Benthic fauna or Zoobenthos (i.e., bottom dwelling animal species) are an important component of marine ecosystems. The larval stages of many benthic organisms are an essential part of the zooplankton and the adult forms are an important part of the food chain, particularly for benthic fish species, and a valuable resource for people. They are also important in ecosystem processes. For example, filter feeding, and detritivore organisms contribute to the cycling of organic matter and when present in sufficient numbers may impact water quality.

Many benthic organisms are sensitive to changes in environmental conditions. This is particularly true for sessile forms (attached or immobile species) that cannot avoid adverse impacts or species that require very specific environmental conditions such as oxygen or nutrient levels. Some species can adapt to environmental change, while others are able to relocate to areas with more favorable conditions.

The composition of the zoobenthic community is largely determined by settlement of larvae from the water column, patterns of which are highly variable in marine systems, and by the physical nature of the benthos, particularly the nature of sediments including particle size and sorting. In addition to these structuring forces several other environmental and ecological factors determine the structure of benthic communities.

The most common species encountered in the project area belong to 3 major taxonomic groups: Polychaeta, Mollusca and Crustacea. Additionally, an echinoderm species, *Amphiura stepanovi*, is quite common in the project area.

Polychaeta include forms such as sand worms, tube worms, and clam worms. The most common species of Polychaeta found in the project area are *Nephtys hombergii* and *Melinna palmata*.

All molluscs in the Black Sea are benthic, with a selective behavior related to substrate type (e.g., *Polyplacophora* species live exclusively on hard or shelly substrata), gastropods live on all substrate types, and bivalves are sedentary on different substrate in the epi- or endobenthos (living on or within the substrate).

The most common molluscs in the project area are *Rapana venosa*, *Mytilus galloprovincialis*, *Modiolula phaseolina*, *Steromphala divaricate*, *Donax trunculus*, and *Polititapes aureus*.

The subphylum Crustacea is a diverse group that includes crabs, lobsters, shrimps, ostracods, barnacles and woodlice. The Crustacea is the most diverse group of arthropods after the insects, including over 800 families, and many subgroups. They play a key role in the trophic chain, mainly as primary consumers (filter-feeders and detritus-feeders), mediating energy and matter transfer to higher trophic levels in marine, oceanic and freshwater trophic chains.

The most common species found within the Project area are *Ampelisca diadema*, *Upogebia pusilla*, *Diogenes pugilator*, *Carcinus aestuarii*, *Eriphia verrucosa*, and *Pachygrapsus marmoratus*.

6.1.6.1.2.2.3 Fish population

Main fish species of economic importance present in the project area are *Sprattus sprattus* (Sprat), *Engraulis encrasicolus* (European anchovy), *Trachurus mediterraneus* (Mediterranean horse mackerel), *Psetta maeotica* (Black Sea turbot), *Belone belone* (Garfish), *Liza aurata* (Golden grey mullet), *Mugil cephalus* (Flathead grey mullet), *Mullus barbatus* (Red mullet), *Mullus surmuletus* (Striped red mullet), *Gobius niger* (Black goby), *Mesogobius batrachocephalus* (Knout goby), *Neogobius melanostomus* (Round goby), *Pomatomus saltatrix* (Bluefish), *Alosa tanaica* (Black Sea shad) and *Alosa immaculata* (Pontic shad) are species of community interest present in the Annex 1 of Habitat Directive.

Other fish species potentially found within the project area are *Huso huso*, *Acipenser gueldenstaedtii*, *Acipenser stellatus*, *Anguilla anguilla*, *Raja clavate*, *Salmo labrax*, *Gasterosteus aculeatus*, *Merlangius merlangus*, *Syngnathus tenuirostris*, *Syngnathus typhle*, *Syngnathus variegatus*, *Nerophis ophidion*, *Hippocampus guttulatus*, *Atherina boyeri*, *Umbrina cirrosa*, *Symphodus cinereus*, *Symphodus ocellatus*, *Symphodus roissali*, *Symphodus rostratus*, *Symphodus tinca*, *Ctenolabrus rupestris*, *Coris julis*, *Trachinus draco*, *Uranoscopus scaber*, *Uranoscopus scaber*, *Uranoscopus scaber*, *Parablennius tentacularis*, *Gymnammodytes cicerelus*, *Ponticola platyrostris*, *Proterorhinus marmoratus*, *Aphia minuta*, *Scorpaena porcus*, *Chelidonichthys lucerna*, and *Pegusa lascaris*.

6.1.6.1.2.2.4 Cetacean

Cetacean fauna in the Black Sea includes three species: The Black Sea harbour porpoise (*Phocoena phocoena relicta*), the Black Sea common dolphin (*Delphinus delphis ponticus*) and the Black Sea bottlenose dolphin (*Tursiops truncatus ponticus*). All three species are covered by various conservation designations including Annex IV of the European Habitats Directive and therefore require strict protection by EU member states. Based on expert and anecdotal observations in the Project area, the most frequently observed species were the Black Sea harbour porpoise and Black Sea bottlenose dolphin (especially in the coastal area of the project), but the Black Sea common dolphin, is also considered likely to be present in the offshore area.

Their presence within the project area would depend primarily on the season and on the availability of prey.

6.1.6.2 Identification of sensitive areas that may be affected by the project

6.1.6.2.1 Onshore

The onshore part of the project site does not intersect any natural protected area. Near the eastern boundary of the onshore project site lies the Natura 2000 Special Protection Area ROSPA0076 Marea Neagră, designated for the protection of 37 aquatic species (including marine species), and the Natura 2000 Site of Community Importance ROSCI0273 Zona marină de la Capul Tuzla.

Additional information on the relation of the project site and the Natura 2000 sites is presented in Section 12 of the Presentation memorandum.

The closest natural protected area of national importance is the nature reserve Techirghiol Lake (RONPA0937), located at approximately 5 km distance north from the project site.

As identified during the baseline surveys, from the flora point of view the most sensitive areas of the onshore part of the project is represented by the shore area, where characteristic species of the Natura 2000 habitat 1210 Annual vegetation of drift-lines were identified. In this area the pipeline crossing will be trenchless, using the microtunnelling method.

In terms of bird species, breeding and sedentary species were observed, which are characteristic to agricultural ecosystems and steppe areas. In addition, aquatic species and wintering and migratory birds, mostly common for the Dobrogea region, were also observed. It is important to note the presence in migration of the species *Larus fuscus fuscus*, which is rather rarely observed in Romania. At the seashore, bird concentrations occurred

during the winter months, providing evidence that the shore is good for shelter and food. The type and number of bird species observed during this period reflected the type of habitats and the agricultural and anthropic activities from the seashore or nearby villages. The numbers and observed species at and near the project site varied from one period to the next, especially during the agricultural working periods (the ploughing season). During summer and autumn, the presence of a large number of yellow-legged gulls (*Larus michahellis*) was observed, feeding on the ploughed fields which contain grubs and small mammals.

The onshore part of the project site is represented mainly by agricultural land. Although numerous fauna species were identified on the project site, including species of community interest, the site does not represent a sensitive area, similar areas being located on the neighboring lands. Overall, the best fauna species habitats identified were the patches of natural vegetation near the project site, but the project site and the surrounding agricultural fields also represent favorable habitats for several species, especially rodents. Dens of *Meles meles*, *Vulpes vulpes* and *Canis aureus* were identified on the irrigation channels located along the project site and in the area of the orchard. The irrigation channel located along the future access road (which will be part of a separate project) represents an important area for the fauna species, due to the fact that some natural elements are still present here. The irrigation channel will not be affected by the proposed construction works.

6.1.6.2.2 Offshore

The following Natura 2000 sites under the Habitats Directive have been identified as potentially being affected by the project development:

- ROSCI0197 - Plaja submersă Eforie Nord – Eforie Sud;
- ROSCI0273 - Zona marină de la Capul Tuzla;
- ROSCI0293 - Costinești - 23 August;
- ROSCI0281 – Cap Aurora;
- ROSCI0311 - Canionul Viteaz.

The following Natura 2000 sites under the Birds Directive have been identified as potentially being affected by the project development:

- ROSPA0076 – Marea Neagră.

The following Natura 2000 habitats are present within the Natura 2000 sites under the Habitats Directive⁴:

- **ROSCI0197 – Plaja submersă Eforie Nord – Eforie Sud**
 - 1110 – Sandbanks which are slightly covered by sea water all the time
 - 1140 – Sandflats and mudflats not covered at low tide
 - 1170 – Reefs
- **ROSCI0273 – Zona marină de la Capul Tuzla**
 - 1110 – Sandbanks which are slightly covered by sea water all the time
 - 1140 – Sandflats and mudflats not covered at low tide
 - 1170 – Reefs

⁴ NATURA 2000 - STANDARD DATA FORM

8330 – Submerged or partially submerged sea caves

- **ROSCI0293 - Costinești - 23 August**

1110 - Sandbanks which are slightly covered by sea water all the time

1140: Sandflats and mudflats not covered at low tide

1170 - Reefs

8330 - Submerged or partially submerged sea caves

- **ROSCI0281 – Cap Aurora**

1110 - Sandbanks which are slightly covered by sea water all the time

1170 - Reefs

1180 - Submarine structures made by leaking gases

8330 - Submerged or partially submerged sea caves

- **ROSCI0311 - Canionul Viteaz**

1170 - Reefs

1180 - Submarine structures made by leaking gases

The following sensitive species are present within the Natura 2000 sites under the Habitats and Birds Directives⁵:

- **ROSCI0197 – Plaja submersă Eforie Nord – Eforie Sud**

4125 – *Alosa immaculata* (Pontic shad) – IUCN status – LC (least concern)

4127 - *Alosa tanaica* (Black Sea shad) – IUCN status – LC (least concern)

1351 – *Phocoena phocoena* (Harbour porpoise) – IUCN status – EN (endangered)

1349 - *Tursiops truncatus* (Bottlenose dolphin) – IUCN status – EN (endangered)

- **ROSCI0273 – Zona marină de la Capul Tuzla**

4125 – *Alosa immaculata* (Pontic shad) – IUCN status – LC (least concern)

4127 - *Alosa tanaica* (Black Sea shad) – IUCN status – LC (least concern)

1351 – *Phocoena phocoena* (Harbour porpoise) – IUCN status – EN (endangered)

1349 - *Tursiops truncatus* (Bottlenose dolphin) – IUCN status – EN (endangered)

- **ROSCI0293 - Costinești - 23 August**

⁵ NATURA 2000 - STANDARD DATA FORM

4125 - *Alosa immaculata* – IUCN status – LC (least concern)

4127 - *Alosa tanaica* – IUCN status – LC (least concern)

1349 - *Tursiops truncatus* – IUCN status – EN (endangered)

1351 - *Phocoena phocoena* – IUCN status – EN (endangered)

- ROSCI0281 – Cap Aurora

4125 - *Alosa immaculata* – IUCN status – LC (least concern)

4127 - *Alosa tanaica* – IUCN status – LC (least concern)

1349 - *Tursiops truncatus* – IUCN status – EN (endangered)

1351 - *Phocoena phocoena* – IUCN status – EN (endangered)

- **ROSCI0311 - Canionul Viteaz**

1349 - *Tursiops truncatus* – IUCN status – EN (endangered)

- **ROSPA0076 – Marea Neagră**

A396 - *Branta ruficollis*

A196 - *Chlidonias hybridus*

A197 - *Chlidonias niger*

A038 - *Cygnus cygnus*

A002 - *Gavia arctica*

A001 - *Gavia stellata*

A189 - *Gelochelidon nilotica*

A180 - *Larus genei*

A176 - *Larus melanocephalus*

A177 - *Larus minutus*

A068 - *Mergus albellus*

A020 - *Pelecanus crispus*

A170 - *Phalaropus lobatus*

A464 - *Puffinus yelkouan*

A195 - *Sterna albifrons*

A190 - *Sterna caspia*

A193 - *Sterna hirundo*

A191 - *Sterna sandvicensis*

Other species of birds not listed in Annex 1 of Bird Directive: A050 - *Anas penelope*, A053 - *Anas platyrhynchos*, A051 - *Anas strepera*, A059 - *Aythya ferina*, A061 - *Aythya fuligula*, A067 - *Bucephala clangula*, A125 - *Fulica atra*, A156 - *Limosa limosa*, A070 - *Mergus merganser*, A069 - *Mergus serrator*, A017 - *Phalacrocorax carbo*, A005 - *Podiceps cristatus*, A006 - *Podiceps grisegena*, A008 - *Podiceps nigricollis*, A004 - *Tachybaptus ruficollis*.

Additional information on the relation of the project site and the Natura 2000 sites is presented in Section 12 of this Presentation memorandum.

6.1.6.3 Works, equipment, and measures for the protection of biodiversity, nature monuments and protected areas

6.1.6.3.1 Onshore

During the construction phase, the main measures recommended for the protection of biodiversity are:

- Installing of temporary fences around the construction areas and conducting of periodic surveys (a daily frequency is recommended) for the identification and eventual relocation of any fauna species (especially reptiles and amphibians);
- Limitation of the access of fauna species onto the construction roads, to avoid vehicle-related mortality. This can be achieved by installing small temporary fences along the road edges;
- Materials should not be stored in areas where they are available to become hiding places for fauna species (especially reptiles, in particular snakes). It is recommended that the materials are sealed or stored in enclosures which do not allow the entrance of animals;
- No open pits, ditches, trenches or potential traps for amphibians, reptiles and small mammals are to be left uncovered or without an escape route. It is recommended that, at a minimum, any construction works of this type to include a ramp for the escape of any trapped animals that may have fallen inside the structure if feasible;
- Limit the areas of stagnant water in the construction site in order to avoid the installation of amphibians (any area with stagnant water can encourage the presence of amphibians, as they could be used as breeding ponds);
- The clearing of the existing vegetation (especially vegetation along the irrigation channel and in shelterbelts) should be minimized;
- Reduction of the noise generated by the project construction activities;
- Avoid affecting the dens of mammals present in the irrigation channels;
- In order to reduce the impact on bats, on the construction site it is recommended that all lights point downwards and that cold temperature lights will be used (LED lights), to attract fewer insects;
- Imposing of speed limitation on the access roads (preferably maximum 15 km/h) in order to avoid vehicle-related mortality, both for terrestrial and flying species;
- Restoration of the areas affected by construction works and an adequate landscaping on the project site, including flora species suitable for invertebrate species, with focus on pollinators.

During the operation phase, the main measures recommended for the protection of biodiversity are:

- In order to reduce the impact on bats, on the NGMS site it is recommended that all lights point downwards and that cold temperature lights will be used (LED lights), to attract fewer insects;
- To improve the habitat conditions for bats on the project site and to compensate for the hunting habitat loss, bat roosts are recommended to be installed close to the forested area and also close to the sea. The roosts should be installed in clusters of 5 units per site, at a distance of 3 m one from the other, at 5 - 6 m above ground, on poles. Schwegler bat houses are to be considered as an option, as the woodcrete material has one of the best rates of bat colonization.
- Grills with a mesh of maximum 1x1 cm should be mounted in any opening of the facility (e.g., tubes, exhausts, building corners), to prevent the animals for seeking shelter or forming colonies in unwanted places, which can harm them and cause unforeseen damage;
- To reduce the barrier effect of the project, it is recommended that a native tree curtain be planted around the NGMS site, delimiting the project site, offering the animals an optimal travel route and reducing the noise levels;
- Any gas exhaust which will be mounted in the field must contain a venting system which will quickly disperse the gases and heat in the atmosphere, to avoid a deadly trap effect for any flying animals;
- Imposing of speed limitation on the access roads (preferably maximum 15 km/h) in order to avoid vehicle-related mortality, both for terrestrial and flying species.

The complete list of avoidance, prevention and mitigation measures will be included in the Environmental studies.

6.1.6.3.2 Offshore

During the construction phase, the main measures recommended for the protection of biodiversity are:

- Appropriate lighting management on vessels and during the construction of SWP, in the period of bird migration (between the end of March and the end of May, as well as mid of September to the end of October);
- Reduce vessels speed during presence of marine mammals or birds on the water surface;
- Implementation of ACCOBAMS methodological guidance on underwater noise mitigation measures for coastal excavations and SWP piling activities;
- Monitoring of water quality in the vicinity of marine protected areas;
- Construction activities in the coastal area outside fish migration period;
- Management plans for the ballast waters of the vessels arriving from other seas and hull cleaning to avoid introduction of new species.

During the operation phase, the main measures recommended for the protection of biodiversity are:

- Use of the best available equipment and technologies to reduce the noise and vibration generated by the SWP;
- Evaluate the toxicity of produced water discharged in the sea in order to adjust the concentration to the level of no effect;

- Schedule maintenance activities for the pipeline and SWP to a minimum (reduce vessels movement to minimum necessary).

The complete list of avoidance, prevention and mitigation measures will be included in the EIA Report.

6.1.7 Protection of human settlements and other public interest objectives

6.1.7.1 Identification of public interest objectives

The area proposed for construction/installation of the onshore facilities of the Neptun Deep project is located in the southern part of the administrative territory of Tuzla commune, Constanta County, close to the northern limit of the administrative territory of Costinesti commune. The project site has currently agricultural land use (although agricultural activities ceased since acquisition of the land by the beneficiaries) and no presence of objectives likely to be of public interest was identified in the closest proximity of the project site.

Private dwellings located within the administrative territory of Costinesti commune were identified to the south and southeast in proximity of the onshore project site. The closest dwellings are located at approximately 100 m south from the limit of the site proposed for installation of the production pipeline and onshore entry point of the microtunnel shore crossing, respectively at approximately 350 m south-east from the limit of the site proposed for installation of NGMS, at the date of present document.

The closest existing human settlements and other built-up objectives located within the administrative territory of Tuzla commune were identified at more than 1 km distance to the north – west and north of the onshore project site.

Tuzla Airport is located to the northwest of the western limit of the onshore site at approximately 2 km distance.

The onshore project site was investigated for presence of potential archaeological sites during the archaeological surveys performed in 2018. According to the findings of the Archaeological Diagnostic Report prepared by the Museum of National History and Archaeology from Constanta (MINAC), the onshore site is located within an area with low archaeological potential, without conclusive archaeological traces.

The closest archaeological objective is represented by Costinescu Mound located at approximately 500 m distance to the north-west corner of the onshore project site.

The project site is partially located within the archaeological protection area of the Romanian shelf of the Black Sea coast (CT-l-s-A-02561 "*Platforma continentală a litoralului românesc al Marii Negre*").

The offshore non-invasive underwater investigations performed within the offshore project site, as part of the procedure for preparation of final Archaeological Diagnostic Report, identified four wooden wrecks that present a certain historical and archaeological potential and require a protection area of 50 m.

Another four targets, which were located at significant depths that could not be technically visualized during these investigations, have been provided with a protected area similarly to the one provided for the four identified wooden wrecks (50 m protection area), pending completion of new investigations for confirmation or negation of artifacts presence. The distance between the protection area limit of these targets and the gas pipeline varies from 63 m to 225 m.

Other existing cultural resources and archaeological sites located in the area of the onshore and offshore project sites were presented in *Chapter 5.3. Location of the site in relation to the cultural heritage*.

There is a cultural landmark proximate to the onshore project area. The Lighthouse of Tuzla is the oldest lighthouse on the Romanian seashore. This fully operational lighthouse was erected in 1900 by the French company Barbier, Bernard & Turrene. It is located in Cape Tuzla, at more than 2 km north-east from the project site.

Religious places were identified on the administrative territory of Tuzla and Costinesti commune, within 5 km radius of the onshore project site, including:

- Four religious places of worship located in Tuzla commune (the Agape Tuzla Baptist Church, the mosque of Tuzla, the New Orthodox Church, and the St. Catherine Church) located at more than 2 km north of the onshore project site;
- Two religious places of worship located in Costinesti commune (the St. John Baptist Cathedral and St. Demetrius Church) located at more than 2 km south of the onshore project site.

6.1.7.2 Works, equipment, and measures for the protection of human settlements and protected and / or publicly protected objects

The main good practice and mitigation measures that should be considered for the protection of human settlements and other public interest objectives:

- Consideration of seasonal work restrictions for certain project components during construction phase due to the onshore project site proximity to residential areas and touristic areas;
- Implementation of noise abatement and dust control measures at the construction works sites due to the proximity of the residential and touristic areas;
- Informing people living or working in close proximity of the onshore construction works sites about the nature, timing, and duration of particular construction activities and construction works sites reinstatement prior to the commencement of construction works;
- Archaeological supervision by an authorized archaeologist will be ensured during execution of onshore excavation works, as required by the endorsement issued by Constanta County Cultural Directorate;
- If any artefacts or unknown archaeological sites are identified during the execution of offshore construction works, in accordance with Law 256/2018, the Beneficiary must ensure a protection zone of 50 m around the identified archaeological finding and must inform the Ministry of Culture about the protection zone by sending the Stereo 70 coordinates, in 72 hours after the protection zone was delimited;
- Installation of warning signs / safety signaling in the area of construction sites;
- Installation of a vegetation perimetral screen at the NGMS and CCR sites to reduce the overall visual impact on the surrounding communities;
- All support vessels used during project lifecycle will be adequately illuminated at night or in foggy conditions;
- Provision of navigation aids at the SWP.

6.1.8 Waste prevention and reduction program of generated waste on site during project construction and operation, including disposal

6.1.8.1 List and quantities of the generated waste

The main type of wastes generated during the **construction and installation works** are as follows:

Non-hazardous waste

- Bulk Solids (Uncontaminated) – Barite, Dessicant, Silica (code 01 05 99);
- Bulk Solids (Uncontaminated) - Blast Media (code 12 01 17);
- Waste paper and cardboard packaging (code 15 01 01), recyclable domestic trash - plastic (code 15 01 02), waste wood (code 15 01 03), recyclable domestic trash - metal (code 15 01 04);
- Dry Filters (code 15 02 03);
- Glycol (code 16 01 15);
- Alkaline batteries (code 16 06 04);
- Electrical/electronic waste (code 16 02 16),
- Household Waste (code 20 03 01);
- Scrap metal (code 20 01 40);
- Recyclable domestic trash – Glass (code 20 01 02).

Hazardous waste

- Potentially contaminated sediments from reservoirs (code 05 01 03*);
- Paint waste (code 08 01 11*);
- Bulk Solids (Uncontaminated) – Cement (code 11 01 98*);
- Used lube oil/motor oil (code 13 02 05*);
- Oil sludge/Tank bottom sludge (code 13 05 02*);
- Contaminated hydrocarbons (contaminated crude, diesel, etc.) (code 13 07 03*);
- Contaminated drums, containers, packaging (metal and plastic) (code 15 01 10*);
- Drums from caustic solutions, solvents; empty pipe dope containers, chemical sacks, cans of dried paint (code 15 01 10*);
- Oily Debris - Oil spill clean-up waste, chemical spill clean-up waste, and PPE; rags, contaminated absorbers (code 15 02 02*);
- Oily Debris - Oily filters (code 16 01 07*);
- Hazardous components from electrical & electronic equipment (code 16 02 15*);
- Lead Acid batteries (code 16 06 01*);

- Nickel-Cadmium (code 16 06 02*);
- Mercury (code 16 06 03*);
- Oily water, Vessel Tank Cleanout, Wash water (code 16 10 01*);
- Oily Debris - Oily sediments (soil mixed with oil) (code 17 05 03*);
- Medical waste (code 18 01 03*);
- Unused or contaminated solvents/chemicals (code 20 01 13*).

The estimated quantities of waste that will be generated during the construction and installation phase are presented in *Appendix G. Lists of estimated waste*.

The main type of wastes generated during **drilling** works are as follows:

Non-hazardous waste

- Fresh water based drilling fluid (code 01 05 04);
- Salt water based drilling fluid (brine) (code 01 05 08);
- Bulk Solids (Uncontaminated) – Barite (code 01 05 99);
- Tonners (code 08 03 18);
- Waste paper and cardboard (code 15 01 01); Plastic (code 15 01 02); Waste wood (15 01 03);
- Antigal Glycol (code 16 01 15);
- Electric and electronic equipment (code 16 02 16);
- Alkaline batteries (code 16 06 04);
- Recyclable domestic trash – Glass (20 01 02);
- Cooking oil (code 20 01 25);
- Electric and electronic equipment (code 20 01 36);
- Scrap metal (code 20 01 40);
- Household Waste (code 20 03 01).

Hazardous waste

- Non-aqueous based drill cuttings (01 05 05*);
- Dried paint (code 08 01 11*);
- Bulk Solids (Uncontaminated) - Cement waste (code 11 01 98*);
- Machine gear and lubricating oils (code 13 02 05*);
- Engine used oil (code 13 02 08*);

- Bilge oil (code 13 04 03*);
- Sludge from oil-water separators (waste containing oil) (code 13 05 02*);
- Other fuel including mixtures (Heli and diesel fuel) (code 13 07 03*);
- Emulsions (code 13 08 02*);
- Drums contaminated with hazardous substances; Sack Waste (contaminated) (code 15 01 10*);
- Contaminated rags, absorbers (code 15 02 02*);
- Oily filters (code 16 01 07*);
- Hazardous components from electrical & electronic equipment (toners, cartridges) (code 16 02 15*);
- Methanol (code 16 03 03*);
- Acid batteries, dry cell batteries (code 16 06 01*);
- Oily Waters - Slops containing used drilling fluids (NAF), cement spacer, chemical additives, wash water; Oil contaminated completion fluids (code 16 10 01*);
- Oily sediments (soil mixed with oil) (code 17 05 03*);
- Medical waste (code 18 01 03*).

The estimated quantities of drilling waste are presented in Appendix G.

The main type of wastes generated during **operation phase** are as follows:

Non-hazardous waste

- Bulk Solids (Uncontaminated) – Barite, Desiccant, Silica (code 01 05 99);
- Bulk Solids (Uncontaminated) – Blast Media (code 12 01 17);
- Waste paper and cardboard (code 15 01 01), recyclable domestic trash - plastic (code 15 01 02), waste wood (code 15 01 03), recyclable domestic trash - metal (code 15 01 04);
- Dry Filters (code 15 02 03);
- Glycol (code 16 01 15);
- Electrical/electronic waste (code 16 02 16);
- Alkaline batteries (code 16 06 04);
- Recyclable domestic trash – Glass (code 20 01 02);
- Scrap metal (code 20 01 40);
- Household Waste (code 20 03 01).

Hazardous waste

- Potentially Contaminated Reservoir Sediments (code 05 01 03*);
- Paint waste (code 08 01 11*);
- Bulk Solids (Uncontaminated) – Cement (code 11 01 98*);
- Used lube oil/motor oil (code 13 02 05*);
- Oil sludge/Tank bottom sludge (oily waste) (code 13 05 02*);
- Contaminated hydrocarbons (contaminated crude, diesel, etc.) (code 13 07 03*);
- Contaminated drums, containers, packaging (metal and plastic) (code 15 01 10*);
- Drums from caustic solutions, solvents; empty pipe dope containers, chemical sacks, cans of dried paint (code 15 01 10*);
- Oily Debris - Oil spill clean-up waste, chemical spill clean-up waste, PPEs; rags, contaminated absorbers (code 15 02 02*);
- Oily Debris - Oily filters (code 16 01 07*);
- Hazardous components from electrical & electronic equipment (code 16 02 15*);
- Lead Acid batteries (code 16 06 01*);
- Nickel-Cadmium (code 16 06 02*);
- Mercury (code 16 06 03*);
- Oily water, Vessel Tank Cleanout, Wash water (code 16 10 01*);
- Oily Debris - Oily sediments (soil mixed with oil) (code 17 05 03*);
- Medical waste (code 18 01 03*);
- Unused or contaminated solvents/chemicals (code 20 01 13*).

The estimated quantities of waste that will be generated during the operation phase are presented in Appendix G.

6.1.8.2 Waste Management Plan

All waste streams (hazardous and non-hazardous), that will be generated during all project phases will be managed in accordance with the Romanian and international requirements and standards applicable to onshore and offshore operations to ensure appropriate management of waste streams, preserve the health of personnel and protect the environment.

The fundamental requirements of an efficient waste management are based on the following key principles:

- Using only those waste management processes and methods that do not endanger human life and the environment;
- "The polluter pays" principle;

- The manufacturer's responsibility principle;
- Using the best practices and cost-effective technologies available.

Waste collecting, segregation, storage, disposal, or recycling activities must not present any risks to personnel health or to the environment (e.g., air, water, land, vegetation, or fauna), considering noise pollution, unpleasant smell or affecting the landscape in any way.

Waste collecting, segregation, storage, disposal, or recycling shall be performed according to physical and chemical properties, compatibility group, recycling potential as well as the nature of fire-fighting substances used for each category in case of fire.

The approach to be adopted by EMEPRL for overall waste management is in accordance with ExxonMobil "Exploration and Production Waste Management Guidelines" namely:

- Plan early to eliminate waste;
- Recycle materials wherever possible; and
- Disposal is the final option.

The Waste Management Plan - WMP will be implemented with regard to the Waste Management Hierarchy, as illustrated in Figure 17, which ranks different types of waste management activity in order of desirability. It states that waste avoidance is the most preferable option, followed by minimization of quantities and hazards of waste generated. Next, it indicates that reuse, recovery, and recycling will be preferred over treatment of waste and that disposal will be considered as a last resort.

Each waste stream will be managed according to the following hierarchy of techniques, in which the technique chosen will be the first in the hierarchy that is safe and practicable.

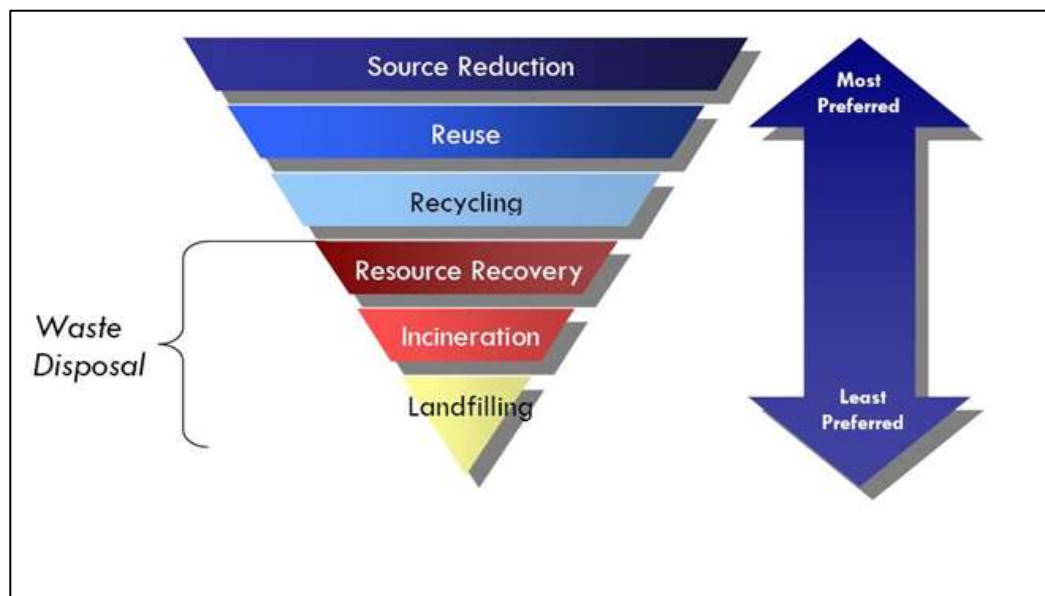

Figure 17 - Waste Management Hierarchy

Whenever equipment, materials and goods are purchased, the company must encourage its suppliers to apply the principle of changing all old packaging (i.e., boxes, bottles, cans) for minimizing, even from the initial phases, the generation of waste. Also, special attention should be given to the equipment, materials and goods that contain a minimum amount of packaging or contain recyclable packaging for minimizing common waste quantities generated within working places.

Reducing wastes generated within working places can be done also by ensuring some practical measures, as follows:

- Purchasing consumables that are packaged so to produce a minimum amount of packaging waste;
- Using re-usable packing;
- Avoiding single use articles for serving meals or cleaning (shall be replaced with articles that can be washed / reused); and
- Avoiding articles and packaging that are not biodegradable or re-usable.

Special attention shall be given to hazardous goods handling. In these cases, proper measure for preventing any accidental spillage shall be taken, according to the relevant requirements. Furthermore, the hazardous goods packaging shall be handled, stored, and transported exactly the same as if they were dangerous goods, following the same restrictions and exemptions as the goods.

6.1.8.3 Program for prevention and reduction of the quantities of waste generated

The Waste Management Hierarchy shall be considered when options are available, as illustrated in Figure 18, which ranks different types of waste management activity in order of desirability. The same waste management hierarchy is to be followed in for the prevention and minimization program development in accordance with the *National Strategy on Waste Management* and as specified in the *European Waste Prevention – Handbook: Guidelines on Waste Prevention Programmes*.

Therefore, each waste stream shall be managed according to the following hierarchy of techniques, in which the technique chosen will be the first in the hierarchy that is safe and practicable. The Waste Prevention and Minimization Program - WPMP should be regarded as a continuous process of program preparation, implementation, monitoring, evaluation, and adaptation as shown in Figure 18:

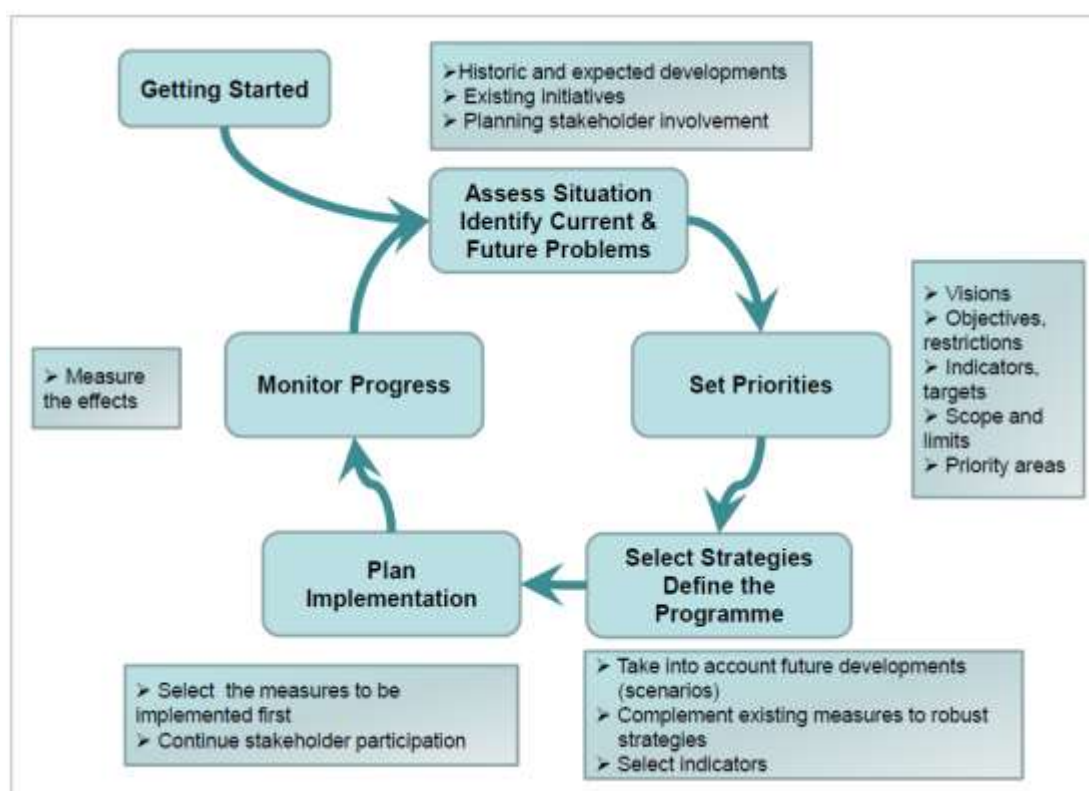

Figure 18 – The WPMP as an on-going process

During project phases it is essential to establish a practical and prioritized set of targets by looking at each waste category. The selected targets and measures will allow the WPMP to achieve its purpose to motivate parties in becoming more resource efficient and using less pollutants, to get them involved and encourage them and to enable them to minimize and prevent unnecessary waste. Targets should consider existing measures in waste management, requirements for optimum technological results and available services that can help EMEPRL achieve selected qualitative or quantitative targets.

Quantitative targets proposed consist of percentage of quantity of waste avoided versus quantity of input material or product used in the activities.

Qualitative targets consist of preventing the use of hazardous materials, reducing the hazardous content of waste generated or selecting a better destination for a particular waste stream (re-use versus recycling). For example, reducing the ratio between the quantity of waste recycled and quantity reused may be a practical target for certain waste streams such as electrical & electronic equipment waste (WEEE), wood packaging, etc. For each waste stream, a look at using less hazardous input materials or with a longer lifespan, for those input materials that are non-essential is needed.

These targets will be accompanied by awareness campaigns and procedural measures, focused on the certain waste streams where there is opportunity for improvement and Key Performance Indicators for monitoring progress.

6.1.9 Management of hazardous chemicals and substances

6.1.9.1 Hazardous substances and chemicals used and / or produced

Chemicals will be used during performance of drilling operations, construction and installation works, and project operation and maintenance activities.

The main chemicals estimated to be used during drilling phase include products for preparation of water based and non-aqueous drilling fluid (e.g., Barite, Sodium bromide, Viscosifier, etc.), well cementing (e.g., Fluid Loss Control, Antifoam, Blended Cement, etc.) and completions (e.g., Gelling Agent, Hydrate Inhibitor, Corrosion Inhibitor, Defoamer, Demulsifier, etc.), and blow out preventer control and anti-freeze protection.

The main chemicals estimated to be used during construction/installation works include hydrotest chemical for pipeline and flowline hydrotesting, chemicals for piping and equipment painting and coating (e.g., coating paint, paint thinner, etc.), nitrogen to facilitate purging of hydrotest water from equipment, chemicals needed during equipment installation (e.g., lubricants, adhesive, etc.), chemicals needed for onshore construction vehicles (e.g., fuels, grease, lubricant oils), and naval diesel fuel for offshore vessels.

The main chemicals estimated to be used during operation and maintenance phase include diesel fuel for onshore back up power generator, fuels for offshore operations and maintenance vessels, Triethylene glycol for gas dehydration system, chemicals injected for flow assurance (methanol, corrosion inhibitor, scale inhibitor, antifoam), nitrogen to facilitate purging of equipment, hydraulic fluids for hydraulic power units, and minimal amounts of biocide for occasional cleaning of the open drain system (including storage tank).

The lists of estimated chemicals to be used during drilling, construction/installation, and operation phases are presented in Appendix H. List of estimated chemicals. The lists include information on chemical description, use, quantities, risk and hazard phrases, and precautionary and security.

Other specific information related to estimated chemicals (e.g., composition, physical and chemical properties, toxicological and ecological information, exposure controls, handling and storage, disposal considerations, transport information, etc.) are presented in the Safety Data Sheet of each chemical attached in Appendix I. Chemicals Safety Data Sheets.

6.1.9.2 Management of hazardous substances and chemicals and protection measures of the environmental factors and human health

6.1.9.2.1 Construction

The chemicals necessary for onshore and shore crossing construction/installation (e.g., lube oils, paint, thinners, etc.) will be procured from authorized suppliers and temporarily stored at the onshore construction sites.

The chemicals necessary for offshore drilling and construction/installation (e.g., drilling fluids chemicals, pipelines precommissioning chemicals) will be procured from authorized suppliers and temporarily stored at the designated onshore project quayside location (Constanta area shore base). The chemicals will be further transported to the offshore drilling/construction/installation sites by specialized installation vessels.

All chemicals will be properly stored in dedicated storage areas at the onshore construction works sites, and onboard of offshore vessels and drilling rig, and will be managed in accordance with legal provisions and material safety data sheets requirements.

6.1.9.2.2 Operation

Fuels

The diesel for onshore standby power generator used to provide backup power to both CCR and NGMS will be stored in a small diesel fuel tank sized to support 3 days of continuous operation at full load. The fuel tank will be installed/incorporated within the standby generator. If required (e.g. power outage), the diesel tank will be supplied regularly by fuel trucks.

TEG

For start-up (initial fill) and makeup purposed during normal operations, the TEG will be stored in a storage tank of 200 m³ storage volume installed in one of jacket legs at the SWP. The TEG storage tank has been designed with enough capacity to accommodate the total volume of the TEG inventory in the Gas Dehydration/Drying and Regeneration System in case of a requirement.

TEG will be delivered to the SWP by supply boats and a hose connection will be used to unload TEG from supply boats to TEG storage tank.

TEG storage tank will be blanketed with fuel gas. Lean TEG storage pump supplies lean TEG from TEG storage tank to TEG surge drum. This is a caisson type flooded suction centrifugal pump (hydraulic driven) which is located within a caisson. The caisson is connected to the jacket leg at the bottom and hence level in the caisson equalizes with storage tank (jacket leg) level. The pump will also start/stop based on TEG surge drum level on-off control. A minimum flow control is provided for the pump protection.

Chemical Injection System

An offshore chemical injection system is required to provide chemical injection capabilities to assist production, separation, and protection inside piping and equipment. Injection is performed continuously or intermittently during normal operations, operational upsets, and startup/re-start operations.

The chemical injection system implemented at the SWP is designed to reliably supply the chemicals required to be injected at pre-determined injection points. Methanol (well start-up and restart only), scale inhibitor, and corrosion inhibitor (Domino only) are required chemicals to be injected in the subsea system for flow assurance and material integrity. Antifoam is the only potential topside performance chemical at this time. Each chemical is provided with a flow meter for individual injection points to allow setting of dosing requirements.

Methanol

Methanol injection is required to prevent hydrates in the non-heated portions of the subsea production system during shutdown and start-up conditions. In case of a shutdown, the tree and wellbore of each well are inhibited by bullheading (forcibly pumping fluids into the formation) methanol (MeOH) into the wellbore. In addition, MeOH will be injected to treat the jumpers, manifolds, unheated sections of the flowlines, and the riser base to prevent hydrate formation inside piping.

For operations startup, electric heating will be used to heat the Domino and Pelican South flowlines to the Heated Safe Operating Temperature (H-SOT). After the flowlines achieve H-SOT, the wells will be started with methanol injection at the tree upstream of the choke. Methanol injection to the wellhead will be terminated when the wellhead, well jumper, manifold header and flowline jumper are heated to the hydrate formation temperature inside piping.

The methanol injection system includes:

- 2 methanol storage tanks of 200 m³ each located in the jacket legs;
- 2 x 100% Methanol storage pumps;
- 2 x 100% Methanol pre-filters;
- 2 x 100% Methanol injection pumps;
- Methanol injection pump inlet and discharge pulsation dampeners.

The methanol will be stored in the two storage tanks installed in two interconnected jacket legs of the platforms. Marine loading hoses will be provided for methanol transfer from boat. During a loading event, there is an audible alarm at the loading station on high liquid level in the jacket leg. Each leg will have an inspection port. Methanol storage pumps located in the caisson are used to transfer methanol from the jacket leg to the methanol pre-filters. Methanol pre-filters are cartridge type filters and are used to filter particles down to 10 microns.

The flowrate required for the methanol system is 11 m³ per hour in order to sweep any water from the production piping and jumpers in the subsea system. To provide reliability, the methanol storage and injection pumps will be fully spared at a 2 by 100% configuration.

Scale inhibitor, corrosion inhibitor and defoamer

Corrosion inhibitor will be injected into the manifold while antifoam injection is provided upstream of the Production Separator. Injection of scale inhibitor downhole into each production well will be provided to mitigate expected scale formation. Scale inhibitor injection will be supplied from the SWP and distributed through the umbilicals to the subsea field.

The scale inhibitor, corrosion inhibitor and antifoam will be stored in a single, segmented (4 compartments) storage tank with double external walls to provide an additional level of containment, with one chemical occupying one slot of the tank. The segmented tank will have an additional slot for a future chemical. The single segmented tank has been designed with the following dimensions: 10,650 mm length x 3,000 mm width x 4,500 mm height.

A spare tank and pump will be allocated for currently unidentified chemical injection needs. The chemical injection pump will use suction for the chemical in the chemical storage tank and then pump it through the subsea umbilical to the subsea wells, manifolds, and flowlines.

The chemicals storage and injection package will include the following equipment:

- Corrosion inhibitor: tank, dampener, pump, filter;
- Scale inhibitor: tank, dampener, pump, filter;
- Antifoam: tank, tank heater, dampener, pump, filter;
- Spare chemical: tank, dampener, pump, filter.

Storage capacity for each chemical (corrosion inhibitor, scale inhibitor, antifoam, spare chemical) is based on 6 months of continuous usage with a 10% contingency. The working volume required for 6 months of supply of each chemical tank compartment is presented below:

- Corrosion inhibitor tank compartment: 28 m³;
- Scale inhibitor tank compartment: 30.4 m³;
- Antifoam tank compartment: 25.9 m³;
- Spare chemical tank compartment: 25.9 m³.

The storage tanks are intended to be filled by gravity using totes. The dedicated storage tanks will be arranged to allow gravity feed into the tanks from totes or iso-containers positioned in any portion of the upper deck laydown area having crane access rather than a designated area. It is anticipated that these totes will be lifted onto the platform in half-height shipping baskets or similar shipping containers instead of individually to minimize the number of lifts. Hoses shall be used to connect from the totes to the filling lines without removal of the totes from the shipping basket. Filling lines and fittings shall be color-coded and provided with specialized lock mechanism identifiable for each chemical type to prevent cross-connection.

The chemical injection pump will take suction from chemical storage tank and then pump the chemical either through the subsea umbilical to the subsea wells, manifolds, and flowlines or through tubing to the topside injection point. Connections between the chemical injection package and the umbilical termination at the hang-off shall be provided. The chemical injection package will be provided with a single skid drip pan for all tanks and pumps.

Nitrogen Purging

Pressurized nitrogen bottles will be provided along with a distribution header to facilitate purging of equipment such as pig traps. The nitrogen system also provides snuffing capability to the emergency relief vent and is sized to provide a minimum of three snuffing attempts in addition to maintenance purging.

Total number of nitrogen cylinders currently recommended is 21 based upon all snuffs and purging. However, purging will be only performed when people are on board, while snuffing is an unlikely but critical event which needs to be able to be operated remotely.

Hydraulic Fluids

Two separate HPUs will be provided on the SWP, respectively: one utilizing an aqueous motive fluid and a second utilizing an environmentally safe, low volatility mineral oil.

The aqueous hydraulic power unit provides pressurized hydraulic fluid for operation of the subsea hydraulic power system as well as actuation of the large bore shutdown valves topside.

The subsea HPU consists of a supply and return tank, a circulation/transfer pump, 2 x 100% service pumps for both the high pressure and low pressure service, accumulator banks for both the high pressure and low pressure services, and distribution for both the high pressure and low pressure services.

The supply tank provides suction to all four service pumps and is sized to allow for operation of over three months without resupply. The return tank allows for filling of new hydraulic fluid, return of topside valve hydraulic fluid, and transfer of clean hydraulic fluid to the supply tank. It is sized to allow the entire system volume to be depressurized plus a given margin.

The circulation/transfer pump is configured to flow from the return tank, through a set of filters, and then back to the return tank until a specified level of fluid cleanliness is achieved. Once achieved, the discharge can be rerouted to the supply tank for transferring of the clean fluid for use.

Each service, both high pressure and low pressure, has an independent set of pumps that are separately isolated in case of leakage. The positive displacement pumps feed accumulator banks dedicated to each service. Downstream of the accumulator banks are distribution panels supplying hydraulic fluid to each control line of the umbilical. The distribution panels allow for remote isolation, depressurization (or dumping) of hydraulic pressure.

The mineral oil hydraulic power unit provides drive fluid to the hydraulically driven caisson pumps serving the jacket leg storage.

The caisson pump HPU consists of, at a minimum, a single reservoir, 2 x 100% service pumps, a cooler, and a filter. The service pumps are to be rotary type with the ability to recycle back to the reservoir without driving any particular pump. The system must be operated at a minimum temperature with energy from the pumps providing the required heat to achieve that temperature prior to initiating drive to any of the caisson pumps. To prevent overheating once the required temperature is achieved, an air cooler is provided on the return line. A filter shall also be incorporated in the circulation path to maintain cleanliness of the system.

Biocide

Maintenance chemicals will not be routinely injected in the open drain system; however, every 5 years or as needed, the open drain system including the storage tank will be flushed with a biocide. During this cleaning activity, all fluids captured in the open drain system will be pumped to storage tank(s) on the maintenance vessel for proper onshore disposal at an approved wastewater management facility.

6.2 Use of natural resources, especially soil, land, water, and biodiversity

During the construction works only materials complying with the national regulations in force, as well as national legislation and standards harmonized with European Union legislation shall be used.

The use of natural resources during construction works will be indirect, as their use will be made through suppliers of building materials, including the use of mineral aggregates, wood, and oil refined fuels.

During the operation phase, natural resources will be used in the situation when maintenance works will be necessary.

7. Description of the environmental aspects likely to be significantly affected by the project

7.1 Nature of impact on environmental components

7.1.1 Impact on water

The potential impacts on the quality and quantitative regime of water during construction/installation works are represented by:

- Water pollution due to accidental leakage of wastewater;
- Water pollution due to accidental fuel, oil, chemicals, and other liquids leakage from construction vehicles, equipment, and facilities;
- Water pollution due to improper management of waste, fuels, chemicals and used materials at onshore and offshore construction sites;
- Water pollution due to improper discharge of fluids and wastewater produced during drilling, construction/installation, precommissioning and commissioning phase;
- Water pollution due to fuel and materials leakage following support vessel accidents;
- Water pollution due to execution of shore crossing, near shore and offshore dredging and trenching works that generate temporary increase in suspended sediments levels or turbidity;
- Water pollution due to improper quality and use of material used for backfilling of nearshore and offshore excavations and trenches.

The potential impacts on the quality and quantitative regime of water during operation of the Neptun deep Project are represented by:

- Water pollution due to accidental leakage of wastewater resulting from operation of NGMS and CCR sites;
- Water pollution due to improper management of waste, fuels, and other materials at onshore NGMS and CCR sites;
- Water pollution due to improper discharge of fluids and wastewaters resulted during operation of offshore infrastructure (produced water, well restart fluids, subsea valve actuator fluids, platform drains water, domestic wastewater and rainwater generated by the operations and maintenance support vessels);
- Water pollution due to accidental fuel, oil, chemicals, waste, or other materials leakages into the Black Sea during operations and maintenance activities at the offshore infrastructure and from support vessels;
- Water pollution due to fuel and materials leakage following support vessels accidents.

Compliance with the safety measures provided in the project design and a proper maintenance program for vehicles and equipment will reduce to a minimum the risk of accidental leakage of fuel, chemicals and waste waters during project construction and operation phases. The potential impact is estimated to be negative, direct and on short term.

A potential impact on water quality resulting from the discharge of wastewater and/or the debris resulting from drilling activities and from carrying out dredging/trenching activities. These could lead to a change in water quality around the drilling and dredging/trenching units (mainly increased turbidity). This potential impact may be negative, direct, and on short term.

Discharge of fluids and wastewater resulted during operation of offshore infrastructure (produced water, well restart fluids, subsea valve actuator fluids, platform drains water) could lead to potential negative impact on the Black Sea water. This potential impact is estimated to be negative, direct, and on long term.

The vessels used during offshore construction and operation will comply with the International Convention for the Prevention of Pollution from Ships (MARPOL) thus reducing the risk of a potential impact due to discharges from ships. This potential impact is estimated to be negative, direct, and on short term.

Accidental collision between ships and /or ships and SWP, leading to unplanned discharges of pollutants into the water, is very low probability, but if an incident should occur, safety plans specific to possible contamination will be activated. This potential impact is estimated to be negative, direct, and on short term.

7.1.2 Impact on air quality

The potential impacts on the quality of air during construction/installation works consist of:

- Air pollution with particulate matter (dust) due to earthwork movements (vegetation clearance, soil excavation, fillings), traffic on unpaved roads and construction materials (ballast, sand);
- Air pollution with NO_x, SO₂, CO, particulate matter, heavy metals, (Cd, Ni, Cr) and hazardous pollutants for air because of the internal combustion engines of the ships, vehicles and equipment needed to perform the construction/installation works.

The potential impacts on the quality of air during operation of the Neptun Deep Project consist of:

- Air pollution with emissions associated with onshore (one diesel generator) and offshore (three Solar Centaur 50 gas turbine generators and a gas driven Essential Service Generator) power generation;
- Air pollution with emissions associated with onshore venting and offshore flaring and venting;
- Air pollution with emissions associated with internal combustion engines of the helicopters, ships and vehicles used for the operation phase.

Dust and emissions from construction vehicles and equipment

The dust emissions are often strongly varying one day to another, depending on the activity level, the specific operations, and the dominant meteorological conditions.

The emissions regime of the combustion engines is dependent on the activity level and specific operations, having an important variability from one day to another and from one process phase to another.

Due to the temporary nature of construction works, and with appropriate mitigation measures, it is estimated that the potential impact of the construction works on the air quality in the area will be negative, direct, and on short term.

Emissions from power generation during onshore and offshore operations

The Solar Centaur 50 gas turbines to be installed at the SWP will be equipped with Low NO_x systems - DLE (at 100% load the Centaur 50 has 25 ppmvd NO_x at 15% O₂. That is within the IFC guideline of 42 ppm at 15% O₂ for gas turbine electric generation. It is estimated that the potential impact from offshore power generator is unlikely and long term.

The onshore diesel generator and the offshore gas driven Essential Service Generator will only be used in the event of an emergency when the main power source (gas turbines for offshore and local electrical network for onshore) is not available. Due to the limited running time of these two generators, it is considered that the potential impact is unlikely, and short term.

Emissions from flaring and venting

The main function of the flaring system is to safely dispose of low-pressure gas from the process (mainly TEG regeneration) and the main function of the onshore and offshore venting systems is to safely release high pressure gas in case of non-routine events (e.g., if the flow is blocked in the export pipeline, or in case of upset in the process). These releases are for short duration only and may happen a few times per year.

Due to the dispersive nature of the offshore environment and the lack of receptors in the vicinity of the offshore infrastructure, locally elevated concentrations of emissions will be short lived and are unlikely to be detectable except in the immediate vicinity of the activities in normal operating conditions. Direct emissions of CH₄ during venting represent GHG emissions. It is considered that the potential impact of the flaring and venting on the air quality will be negative, direct, and on short term.

The venting system at NGMS will be used during operation period only in case of malfunction and in case of scheduled and planned maintenance for depressurization the NGMS pipes. Due to the low quantities of gas released during these venting events it is estimated that the potential impact of the onshore venting on the air quality will be negative, direct, and on short term.

Emissions from transport and maintenance activities

In normal operating conditions, it is envisaged that an offshore maintenance activity will occur every 3 months (4 times per year) using support vessels. Helicopters will be used only in case of an emergency at the SWP and are not considered an important air pollution source given their limited use. Because CCR and NGMS will be operated by only two persons at a time, the number of vehicles used for transport will be limited.

The emissions specific for the fuel burning in internal combustion engines and the main pollutants are represented by NO_x, CO, SO₂, and particulate matter.

Due to relatively low frequency of the terrestrial and naval traffic, the air quality potential impact is estimated to be unlikely as they would have limited impact on the current baseline.

7.1.3 Noise and vibration

The main potential impacts associated with the noise and vibration during the construction and installation works execution, are represented by:

- Discomfort for the local population and for the tourists by noise and vibration produced by the onshore construction/installation vehicles and equipment;
- Disturbance of fauna species activity by noise and vibration produced by the onshore construction/installation vehicles and equipment;
- Disturbance or death by collision of fish and mammals as a result of noise and vibration generated during coastal excavations, offshore installation construction, drilling, and used vessels.

The main potential impacts associated with the noise and vibrations during the operation, are represented by:

- Discomfort for the local population and for the tourists by noise and vibration produced by the CCR and NGMS equipment;
- Disturbance of fauna species activity by noise and vibration produced by the SWP and maintenance vessels;

For the human population, prolonged exposure to noise can lead to serious health effects mediated by the human endocrine system and by the brain, such as sleep disturbance, cardiovascular diseases, annoyance (a feeling of discomfort affecting general well-being), cognitive impairment and mental health problems. It can also cause direct effects such as tinnitus. Indirect impacts may also be associated to noise, which may lead to economic losses (e.g., due to a decrease of tourists in the area) and depreciation of real-estate values.

During the construction/installation stage technological and operational measures will be implemented for reducing the noise associated with the works and as much as possible the works will be performed outside the tourist season period. The noise sources will have a temporary character and duration, they will manifest locally and intermittently. The potential impact of the noise and vibration is estimated to be negative, direct and on short term.

During offshore construction and installation, the majority of vessels (pipelaying ships, drill rig, dredging) will be anchored or moving at slow speeds thus reducing the probability of collision with fish and mammals. The potential impact of the noise and vibration is estimated to be negative, direct, and short term.

During operation the offshore produced noise and vibration will occur at great distance (approximately 160 km) from the shore. The design criteria for SWP is to use low noise generation equipment and the maintenance ships to only take 4 trips per year. The potential impact of the noise and vibration generated offshore is estimated to be negative, direct, and long term.

During the operating phase the noise sources present on the CCR and NGMS site will be continuous and permanent. The CCR and NGMS sites will be surrounded by screening consisting of trees, plants, shrubs and fencing that would decrease the intensity of the noise produced here. The potential impact of the noise and vibration generated onshore is estimated to be negative, direct, and long term.

7.1.4 Impact on soil and subsoil

The main potential impacts on the quality of soil and subsoil during construction/installation works are represented by:

- Soil pollution due to accidental fuel, oil, chemicals, and other liquids leakage from construction vehicles and equipment;
- Soil pollution due to improper management of waste, fuels, chemicals and used materials at onshore construction sites;
- Soil pollution due to accidental discharges of fluids and wastewaters from construction works site;
- Seafloor sediments pollution due to accidental fuel, oil, chemicals, waste, or other materials leakages from drilling platform and support vessels used during drilling, construction and installation, pre-commissioning, and commissioning works;
- Seafloor sediments pollution due to improper management and discharge of wastewater generated during drilling, construction/ installation, precommissioning and commissioning.

The main potential impacts on the quality of soil and subsoil during operation phase include:

- Soil pollution due to accidental fuel and oil or other material leakages on soil during operations and maintenance;
- Soil pollution due to accidental discharges of resultant wastewaters at CCR site;
- Seafloor sediments pollution due to accidental fuel, oil, chemicals, waste, or other materials leakages from SWP and support vessels used for operations and maintenance activities;
- Seafloor sediments pollution due to improper management and discharge of produced water/wastewater at the SWP and support vessels used for operations and maintenance.

Compliance with the safety measures provided in the project design and a proper maintenance program for vehicles and equipment will reduce to a minimum the risk of accidental leakage of fuel, chemicals and waste waters during onshore construction and operation. In case of accidental leakage, the vehicle/equipment will be turn off until the leakage is remediated, and pollution retention materials will be used to limit and remove the spillage. It is estimated that this potential impact will be negative, direct, and short term.

A potential impact on Black Sea floor sediments quality can result due to discharge of wastewater and/or the debris resulting from drilling activities and from dredging activities. These could lead to a local change in sediment quality around the drilling and dredging units, but this change will be on short term and reversible. It is estimated that this potential impact will be negative, direct, and short term.

Discharge of fluids and wastewater resultant during operation of offshore infrastructure (produced water, well restart fluids, subsea valve actuator fluids, platform drains water) could lead to potential negative impact on the seafloor sediments. It is estimated that potential impact on the sea floor is mainly limited to the proximity of discharge point and will be negative, direct, and long term.

The vessels used during offshore construction and operation will comply to MARPOL provisions thus reducing the risk of a potential impact on the seafloor sediments due to discharges from ships. It is estimated that this potential impact will be negative, direct, and short term.

7.1.5 Impact on biodiversity

Onshore Biodiversity

The main potential impacts on onshore biodiversity during the execution of the construction and installation works are represented by:

- Habitat loss for fauna species, especially feeding areas, due to the use of land areas during construction;
- Habitat alteration due to the temporary works, as well as due to air pollution. Habitat alteration is also generated by favoring the dispersal of invasive non-native plant species, both in areas where vegetation has been removed and in unaffected areas, by anthropocoria due to the movement of equipment and human presence on the site;
- Disturbance of fauna species activity, due to human presence, noise, and lighting, especially during breeding and nesting periods;
- Increase in fauna species mortality mainly in the case of species with reduced mobility, such as amphibians and reptiles, following interventions by excavations or compacting of soil, as well as a result of collision with the traffic.

The potential impacts on biodiversity during the construction phase are estimated to be negative, direct and indirect, short and medium term, with the exception of the habitat loss for fauna species, which will be negative, direct and permanent.

The main potential impacts on onshore biodiversity during the operation phase are represented by:

- Disturbance of fauna species activity, due to noise, lighting, and human presence;
- Increase in fauna species mortality mainly in the case of species with reduced mobility, such as amphibians and reptiles, as a result of collision with the traffic;
- Habitat alteration, generated by favoring the dispersal of invasive non-native plant species, by anthropocoria, due to the movement of equipment and human presence on the site.

The potential impacts on biodiversity during the operation phase are estimated to be negative, direct and indirect and long term.

Offshore Biodiversity

The potential impacts on offshore biodiversity during execution of the works were identified by taking into consideration different activities during the construction and installation of offshore components of the project and how they might interact with different biological components of the environment, and it can be defined by:

- Disturbance and loss of habitats and associated species by the construction and installation works (coastal excavations, pipeline placement on the seabed, offshore platform, submarine extraction installations, ships anchoring, etc.). The potential impact is estimated to be direct, negative, with a low magnitude, reversible (disturbed habitat is estimated to be recolonized after the impact will stop in one to two years based on the reproduction cycle of benthic organisms).
- Change of benthic habitat types by installing new hard substrates on the seabed (e.g., offshore submarine installations, pipeline). The potential impact is estimated to be direct, positive, with a low magnitude and will manifest during the entire lifecycle of the project (it is estimated that the new hard substrate represented by the underwater installations will be colonized in five years based on the reproduction cycle of benthic organisms).
- Disturbance of all organisms and habitats in case of accidental pollution with hydrocarbons or other chemicals discharged into the sea. The potential impact is estimated to be direct, negative, with a high magnitude, and reversible.
- Disturbance or death by collision of fish and mammals as a result of noise and vibration generated during coastal excavations, offshore installation and construction, drilling, and used vessels. The potential impact is estimated to be direct, negative, with a very low magnitude, and irreversible.
- Disturbance of fish breeding and feeding habitats, especially demersal species. The potential impact is estimated to be direct, negative, with a low magnitude, and reversible.
- Potential introduction of invasive species. The potential impact is estimated to be direct, negative, with a high magnitude, and irreversible.

The main potential impacts on offshore biodiversity during the operation phase are represented by:

- Disturbance of marine mammals and birds due to presence of SWP - the potential impact is estimated to be direct, negative, with a low magnitude, and will be reversible after decommissioning.
- Disturbance to marine species due to presence of maintenance vessels – the potential impact is estimated to be direct, negative, with a low magnitude, and will be reversible after decommissioning;
- Disturbance to pelagic habitat due to produced water discharge – the potential impact is estimated to be direct, negative, with a low magnitude, and will be reversible after decommissioning.

7.1.6 Impact on population and human health

The main potential impacts on population and human health during the construction and installation works execution, are represented by:

- Discomfort for the local population and for the tourists due to noise and vibrations produced by the onshore construction/installation vehicles and equipment;
- Air pollution with particulate matter (dust) due to earthwork movements (vegetation clearance, soil excavation, fillings), traffic on unpaved roads and construction materials (ballast, sand);
- Air pollution with emissions from internal combustion engines of the ships, vehicles and equipment needed to perform the construction/installation works;
- Potential accidents as a result of people accessing the construction works sites;
- Employment of local population during construction/ installation works.

The main potential impacts on population and human health during operation phase, are represented by:

- Discomfort for the local population and for the tourists due to noise and vibrations produced by the CCR and NGMS equipment;
- Potential accidents as a result of people accessing the NGMS and CCR sites;
- Potential impact on the fishing activity due to presence of the subsea components of the Neptun Deep Project;
- Potential water pollution due to fuel and other liquids leakage following support vessels accidents.

The closest dwellings are located at approximately 100 m south from the limit of the site proposed for installation of the production pipeline and onshore entry point of the microtunnel shore crossing. Work restrictions (working outside the tourist season) during construction phase due to the onshore project site proximity to residential areas and touristic areas will be implemented to reduce the potential impact. Noise abatement and dust control measures during construction works phase will be implemented. The onshore construction works are anticipated to be completed in approximately one year. It is estimated that this potential impact will be negative, direct, and on short term.

The emissions from vehicles and ships used during construction phase is dependent on the activity level and specific operations, having an important variability from a day to another and from a process phase to another. Due to the temporary nature of construction works and to the relatively small scale of the project, and with appropriate mitigation measures, it is estimated that the potential impact on population and human health will be negative, direct, and on short term.

Construction works sites will be fenced and warning signs / safety signaling will be installed in the area of the construction sites. People living or working in close proximity to the onshore construction works sites will be informed about the nature, timing, and duration of construction activities. The potential impact on population and human health due people accessing the works site it is estimated to be negative, direct, and on short term.

It is currently anticipated that Romanian companies and local population will be employed as much as possible during onshore construction/installation works. This will contribute on short term to the local economy and to lower the unemployment level within in the project area. The potential impact will be positive, direct, and on short term.

The closest dwellings are located at approximately 350 m south-east from the limit of site proposed for installation of NGMS. The CCR and NGMS sites will be surrounded by green screening (trees, plants, shrubs) and fencing that will decrees the noise intensity produced by operation of CCR and NGMS. The potential impact is estimated to be negative, direct, and long term.

The subsea equipment and facilities situated in normal fishing grounds will be protected against trawl activities thus reducing the possible impact on fishing activities. The potential impact on fishing activities is estimated to be negative, direct, and short term.

The support vessels used during project operation will be adequately illuminated at night or in foggy conditions and SWP will be fitted with navigation aids and Automatic Identification System to alert 3rd parties about the presence of SWP. Potential accidental collision between ships and /or ships and SWP is improbable, but if an incident would occur, safety plans specific to possible contamination will be activated. This potential impact is estimated to be negative, direct, and short term.

7.1.7 Impact on historical and cultural heritage

Information about existing historical and cultural objectives and archaeological sites located in the area of the onshore and offshore project sites were presented in *Chapter 5.3. Location of the site in relation to the cultural heritage* and *Chapter 6.1.7.1 Identification of public interest objectives*.

The main potential impacts on the historical and cultural heritage during the construction/installation phase are represented by:

- Damage to onshore archeological artefacts due to earthwork movements (e.g., vegetation clearance, soil excavation);
- Damage to local historical and cultural objectives due to vibrations from onshore construction works;
- Damage to offshore archeological artefacts due to subsea construction and installation works (coastal excavations, pipeline placement on the seabed, offshore platform installation, submarine extraction installations, ships anchoring).
- All onshore excavation works will be supervised by an authorized archaeologist, as required by the endorsement issued by Constanta County Cultural Directorate. If any artefacts or archaeological sites will be identified during the execution of construction works, all works will be ceased and the archaeologist present on site will be consulted and all regulatory protective measures will be implemented.
- According to the Offshore Law, if any artefacts or unknown archaeological sites are identified during the execution of offshore construction works, the Beneficiary must ensure a protection zone of 50 m around the identified archaeological finding and must inform the Ministry of Culture about the protection zone by sending the Stereo 70 coordinates, in 72 hours after the protection zone was delimited.

The potential impact of onshore and offshore construction works on archeological artefacts is estimated to be negative, direct, and short term.

Due to the location of the existing onshore and offshore historical and cultural heritage objectives, as well as the results of the archeological diagnostic surveys, the potential impact during the operation phase is estimated to be unlikely.

7.1.8 Impact on landscape and visual environment

The main potential impacts on the landscape and visual environment during the construction/installation phase are represented by:

- Visual impact for the tourists and locals due to the presence of the onshore construction equipment and vehicles;
- Disturbance of the natural landscape during construction works (temporary works and temporary construction facilities).

Mitigation measures will be adopted during onshore construction works. It is anticipated that the works will be performed with restrictions (e.g., working outside the tourist season if possible) due to the onshore project site proximity to residential areas and touristic areas. The entire land impacted by the temporary onshore construction works will be restored to its initial state at the end of the works and the temporary construction facilities will be removed. The potential impact of onshore construction works on landscape is estimated to be negative, direct and on short term.

The presence of the NGMS and CCR will potentially impact the landscape and the visual environment due to the site proximity to residential areas and touristic areas. In order to mitigate this potential impact, during the design phase were considered provisions for landscaping, including installation of a green screening (planting of trees, shrubs) for the CCR and NGMS sites and seeding the rest of the onshore project area. The onshore potential impact during operation it is estimated to be negative, direct and long term.

The SWP is located at approximately 160 km from the Romanian seashore and this area is not a common area for leisure and tourist boat trip routes. It is estimated that the presence of the SWP will have no potential negative impact on the landscape or the visual environment.

7.1.9 Impact of the project on climate change

The main potential impacts on the climate change during the construction/installation phase are represented by GHG emissions from internal combustion engines of the ships, vehicles and equipment needed to perform the construction/installation works.

The main potential impacts on the climate change during operation of the Neptun Deep Project are represented:

- GHG emissions associated with onshore (one diesel generator) and offshore (three Solar Centaur 50 gas turbine generators and a gas driven Essential Service Generator) power generation;
- GHG emissions associated with onshore venting and offshore flaring and venting;
- GHG emissions from internal combustion engines of the helicopters, ships and vehicles used during the operation phase.

GHG emissions from construction vehicles and equipment

The GHG emissions regime of combustion engines is dependent on the activity level and have an important variability from a day to another and from a process phase to another. Due to the temporary nature of

construction works and to the relatively small scale of the onshore project, and with appropriate mitigation measures, it is estimated that the potential impact of the construction works on the climate change in the area will be negative, direct, and short term.

GHG emissions from power generation

A BAT study was conducted before the final design solution for offshore power generation (Solar Centaur 50 gas turbines with Low NO_x systems – DLE) was chosen from the analyzed options, considering the GHG emissions. The potential impact on climate change from offshore power generator is estimated to be negative, direct, and long term.

The onshore diesel generator and the offshore gas driven Essential Service Generator will be used intermittently during operation, in case of an emergency. Due to the limited running time of these two generators, it is estimated that the potential impact on climate change is unlikely and on short term.

GHG emissions from flaring and venting

A BAT study was conducted before the final design solution for flaring and venting offshore was chosen from the analyzed options, considering the GHG and other air emissions. Direct emissions of CH₄ during venting represent GHG emissions. It is estimated that the potential impact of the flaring and venting on the climate change will be negative, direct, and short term.

The venting system at NGMS represent a source of GHG and other air emissions. Direct emissions of CH₄ during venting represent GHG emissions. It is estimated that the potential impact of the onshore venting on the climate change will be negative, direct, and short term.

GHG emissions from transport and maintenance activities

During operation, it is envisaged an offshore maintenance activity of 4 times per year using support vessels. Helicopters will be used only in case of an emergency at the SWP. Since CCR and NGMS are operated by only two personnel at a time, the number of vehicles used for transport will be low.

All vehicles will be required to have an updated and regular maintenance record and verification in order to comply with the national legal provisions (including engine emissions). Also, the ships to be used for maintenance activities will comply to national and international regulations regarding the fuel used in order to limit the engines emissions. Due to reduced frequency of the terrestrial and naval traffic, it is estimated that the potential impact on the climate change will be negative, direct, and short term.

7.1.10 Impact of climate change on the project

The climate in the Neptun Deep Project area is warm and temperate with hot summers. It is also fully humid, as the environment is coastal being adjacent to the Black Sea. Therefore, the relative humidity spans between 80% and 88% in August and December, respectively, and presenting small monthly variations. The prevailing winds blow from the west and the north, with mean annual speeds spanning between 4 and 6.5 m/s.

The mean monthly maximum and minimum temperature spans from -2.1°C in January to 26.3°C in July, whereas the mean annual temperature is 11.7°C.

The maximum temperature ever recorded in Constanta area was on the 10th July 1927 and was 38.5°C.

The mean annual precipitation is 406.9 mm, presenting its minimum during February (26.8 mm) and maximum during November (44.4 mm). However, the maximum 24-hour precipitation is recorded during August and October, identifying more events with higher precipitation intensity. The mean maximum number of days with rainfall recorded, fall into December (10.3 days), whereas the mean maximum number of days with snowfall recorded, fall into January (5.4 days).

Analysis performed on data collected from meteorological stations (between 1961 and 2012) highlights significant changes in the temperature and precipitation regimes in Romania with the following characteristics:

- Upward trends in seasonal temperature are statistically significant (at 90 % level of confidence) over almost all Romanian territory in spring and summer (2°C); in winter, temperatures are increasing in parts of Southern, central and North Eastern regions of Romania;
- Upward trends in autumn temperature are statistically significant (at 90 % level of confidence) only in a limited area in the Eastern part of the country.
- Downward trends in the seasonal amount of precipitation are present over mountain areas and over Southern and Eastern parts of Romania, in summer, spring and winter (at a confidence level of 90%);
- Significant upward trends (at 90 % level of confidence) in autumn precipitation are present in areas from Northern and central part of Romania; upward significant trends are also present in the South-Eastern part of the country.

During design phase the main climate and metocean conditions were considered. The main metocean conditions considered are wind, waves and water current. Due to the significant distance that the offshore project site spans, the area was broken into five regions and metocean criteria were developed for each (Figure 19).

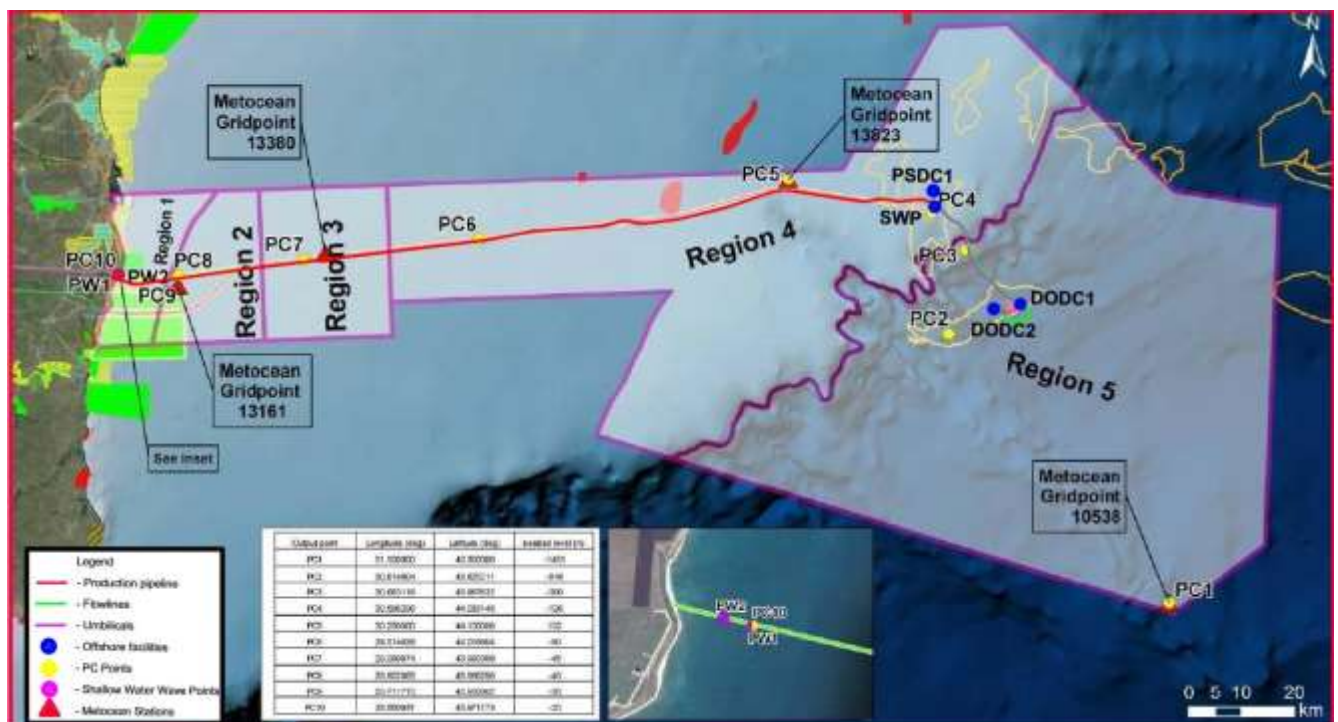

Figure 19 - Map of metocean criteria region separations for Neptun Deep Project

Wave criteria were developed by the ExxonMobil Upstream Research Company (URC) using the GROW-FINE-BS (Global Reanalysis of Ocean Waves Fine Black Sea) hindcast wave data. Based on extreme wave criteria, dominant wave directions are between south and west. In the nearshore region, dominant wave conditions are towards the west or coastline. In the platform location area on the shelf, the dominant wave conditions are towards the southwest and down the slope towards the south.

Extreme wind criteria were developed by URC using the GROW-FINE-BS hindcast wind data. Prevailing wind conditions are from the northern sectors for all locations in the offshore project development area.

Annual normalized vertical current profile is based upon the NEMO-BLS model simulation results. Annual normalized vertical surface current profile was developed only for region 4 that contains the SWP location while bottom current profiles were developed for all regions of the offshore project site.

The main potential impact of climate change on the project is the occurrence of extreme weather conditions that can damage the Neptun Deep facilities, for example storms, tornadoes, floods, very low temperatures. It is estimated that the potential impact of the climate change on the project during the construction and operation phases will be negative, direct, and long term.

7.2 Impact extent

It is estimated that the potential impact on the environmental components during the project construction and installation, and operation phases will be local. It is estimated that generally, the impact will be unlikely if construction, operation and maintenance plans, procedures and schedules are properly followed.

7.3 Impact magnitude and complexity

It is estimated that the overall potential impact on the environmental components during the project construction and installation will be unlikely, negative, local, and short term and the potential impact on the environmental components during the operation phase will be negative, local, and long term.

7.4 Impact probability

By following the provisions of project design and construction, operation, and maintenance plans/procedures/schedules and by implementing the measures to reduce and mitigate the potential impact on environment, the probability of any events that could impact the environmental components during project lifecycle, will be reduced.

7.5 Impact duration, frequency, and reversibility

It is estimated that the overall potential impact on environmental components during the construction/installation phase will be short term (for the duration of the construction works), low intensity, and reversible.

It is estimated that the potential impact on environmental components during the operation phase will be long term (for the project life duration approximately 20 years), low intensity, and nonreversible.

7.6 Measures to avoid, reduce or mitigate the significant impact on the environment

Measures to avoid, reduce or mitigate the potential impact of the project on the environmental components are:

- Compliance with the safety measures provided in the project design and a proper maintenance program for vehicles and equipment;
- Using daily wetting for the areas where earth works are performed and for temporary construction site roads in order to reduce the dust emissions;
- Speed restrictions for the temporary construction site roads in order to reduce the dust emissions;
- Construction/installation works will be performed outside tourist season period;
- Construction works sites will be fenced and warning signs / safety signaling will be installed in the area of the construction sites;

- All onshore excavation works will be supervised by an authorized archaeologist;
- Using vehicles and equipment that comply with the noise and vibrations regulations;
- Screening consisting of trees, plants, shrubs and fencing for NGMS and CCR sites;
- The vessels used during offshore construction and operation will comply with MARPOL and other relevant national and international regulations regarding the fuel used in order to limit the engines emissions;
- Support vessels used during project operation will be adequately illuminated at night or in foggy conditions and SWP will be fitted with navigation aids and Automatic Identification System to alert 3rd parties about the presence of SWP;
- Reduced frequency of the naval traffic for offshore maintenance due to adopting an unmanned solution for the SWP;
- Design criteria for SWP is to use low noise generation equipment;
- Using gas turbines equipped with Low NOx systems – DLE for offshore power generation (best alternative according to BAT study);
- Using combination of flaring and venting for offshore operation (best alternative according to BAT study);
- Safety plans specific to possible contamination as a ship to ship or ship to SWP collision and specific spill response plan;
- Compliance with the discharge conditions for wastewater according to Romanian regulation and competent authorities' approval.

7.7 Transboundary impact

A potential transboundary impact could occur as a result of:

- International waters pollution due to fuel and materials leakage following support or construction vessels accidents due to the direction of winds and waves in the offshore project area;
- International waters pollution due to technical accidents at SWP and/or subsea equipment's (wells, pipeline, flowlines);
- International waters pollution due to accidental discharge of improper quality fluids and wastewater resulted during operation of offshore infrastructure (produced water, well restart fluids, subsea valve actuator fluids, platform drains water, domestic wastewater and rainwater generated by the operations and maintenance support vessels).

The nearest international border to the onshore project site is represented by Bulgarian territory border situated more than 25 km south of the southern-most edge of the onshore project site. The offshore components are located north of the limit between Romania and Bulgaria EEZ. The closest offshore components to the EEZ limit are the DODC1 and DODC2 are located at approximately 35 km north from the south limit of Romania's EEZ (bordering the Bulgaria's EEZ) in the Black Sea.

The support and construction vessels used will be adequately illuminated at night or in foggy conditions and SWP will be fitted with navigation aids and Automatic Identification System to alert third parties about the presence of SWP. No oil transport ships will be involved in the project construction or operation phases thus limiting the amplitude of oil pollution in case of a ship-to-ship collision. Accidental collision between ships and

/or ships and SWP, is very low, but if an incident would occur, safety plans specific to possible contamination will be activated. This potential impact will be negative, direct, and short term.

The gas extracted by the Neptun Deep project is a dry gas without associated oil. In case of a technical accident at the SWP and/or subsea equipment no oil contamination will occur.

Wastewater discharges will comply with the national legislation, international conventions, the results of the study performed by NIMRD "Grigore Antipa" concerning the maximum concentrations at which the project effluents do not generate adverse effects to marine environment, and competent authorities' approvals. It is anticipated that the impact of the offshore wastewater discharging will be limited to the area of the discharge point thus limiting the potential impact on the international waters.

8. Provisions for environmental monitoring

The monitoring of the impact that the project will have on the environmental components has the role of confirming or invalidating the quantifications of the residual impact made before the implementation of the project, to quantify the efficiency of the proposed avoidance and mitigation measures and to identify new areas where implementation of impact mitigation measures is necessary.

The monitoring program of the main environmental components will be proposed to be performed in three stages:

- Before starting the construction and installation works (pre-construction monitoring);
- During the construction and installation works (during construction monitoring);
- During the operation phase (post-construction monitoring).

The main purpose of the monitoring program will be to track and estimate the evolution in time of the effects produced by the project construction works and operation and to allow adaptation if certain environmental conditions change different way, comparing with the baseline conditions.

The monitoring program will include details about:

- Construction works execution schedule;
- Environmental components, monitoring criteria, sub-criteria;
- Location of monitoring points;
- Monitored indicators, methodology and frequency;

Wave and current readings will also be measured.

The environmental components that may be required to be included in the monitoring program are:

- Water quality;
- Sea floor sediment quality;
- Soil quality;
- Air quality;
- Noise and vibration levels;

- Biological features (e.g., plankton, including phytoplankton, zooplankton and ichthyoplankton), benthos, fish, birds, and mammals; habitats of fauna species, invasive plants species (list of species, locations of presence, trends in their distribution, etc.).

Ecological monitoring is necessary to verify the predicted impacts of the project, to demonstrate the efficacy of mitigation and to document the recovery of impacted receptors from temporary impacts.

If impacts are detected during construction, additional post-construction monitoring will be developed for the project.

The discharged produced water into the Black Sea waters will be monitored for oil in water content, salinity, and other parameters as per requirements of a specific monitoring plan approved by the competent authorities.

The monitoring activities will focus on the environmental components on which it is expected to generate significant forms of impacts, in all stages of the project (construction, operation and decommissioning). The components and points at which the monitoring activities will be carried out will be established within the subsequent stages of the procedure for obtaining the Environmental Agreement.

9. Link to other normative acts and / or plans / programs / strategies / planning documents

9.1 Justification of the project classification according to the provisions of other national normative acts transposing the Community legislation

Environmental Impact Assessment (EIA)

The assessment of the impact of a project on the environment is regulated in Romania by the following normative acts:

- Law no. 292/2018 in force since 09 January 2019, on the assessment of the impact of certain public and private projects on the environment (EIA Law), repealing GD no. 445/2009 and Order no. 135/2010 approving the Methodology for the implementation of the environmental impact assessment for public and private projects; Law no. 292/2018 transposes the provisions of 2011/92/EU Directive on the assessment of the effects of certain public and private projects on the environment, as amended by 2014/52/EU Directive, which entered in force on 15 May 2014;
- Order no. 269/2020 approving the general guide for the stages of the environmental impact assessment procedure, the guide for environmental impact assessment in a transboundary context and other specific guidelines for different areas and categories of projects;
- Law no. 86/2000 on the ratification of the Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters, signed at Aarhus on 25 June 1998.

Neptun Deep project falls under the provisions of Annex 1, Article 14 and Annex 2, Article 10 i and 10 a from Law no. 292/2018.

If a project can have a potential cross-border impact, the following regulations apply:

- Law no. 22/2001 ratifying the Convention on environmental impact assessment in a transboundary context, adopted, in Espoo on 25 of February 1991;
- Order no. 864/2002 approving the Environmental Impact Assessment procedure in a transboundary context and public participation to the decisions on transboundary impact projects.

Neptun Deep project falls under the provisions of Annex 1, Article 15 from Law no. 22/2001.

Water management

The provisions of the Water Framework Directive - WFD 2000/60/EC, as subsequently amended and supplemented, have been transposed into the Romanian legislation by the Water Law no. 107/1996, with subsequent amendments and completions. Water Law no. 107/1996 stipulates the general framework for water management in Romania and it was amended and supplemented by a series of normative acts such as:

- Law no. 310/2004 amending and supplementing the Water Law no. 107/1996 (definitions, provisions, annexes to the Framework Directive 2000/60/EC);
- Law no. 112/2006 amending and supplementing the Water Law no. 107/1996 (pollution control, sand and gravel extraction, waterway dredging, water and aquatic ecosystems protection, flood protection, etc.);
- Law no. 196/2015 for the modification and completion of the Water Law no. 107/1996 (list of priority substances);
- Decision no. 570/2016 regarding the approval of the Program for the gradual elimination of discharges, emissions and losses of priority hazardous substances and other measures for the main pollutants (amendments to the list of priority substances in the Water Law No. 107/1996).

Neptun Deep project falls under the provisions of Article 48 and Article 54 from the Water Law No. 107/1996.

- The quality of surface water is regulated by Order no. 161/2006 for the approval of the Normative regarding the classification of surface water quality for establishing the ecological status of the water bodies.
- NTPA-001/2002 - The norm regarding the establishment of the loading limits with pollutants of industrial and urban wastewater at the discharge in natural receptors, from 28.02.2002 amended by GD 352/2005 and GD 210/2007 establishes the general quality conditions of all categories of wastewater, before their discharge into natural receptors, as well as the permissible limit values of the main quality indicators of these waters. The scope of this regulation includes industrial and urban wastewater that has been treated or not. Wastewater discharge conditions established according to art. 2 of the norm are provided in table no. 1 of this normative.

Air quality

The Air Framework Directive 2008/50/EC has been transposed into Romanian legislation by the Law no. 104/2011 on the ambient air quality, modified and completed by the Decision no. 336/2015, Decision no. 806/2016, and Law no. 203/2018.

The law establishes in Annex no. 2, all urban agglomerations and areas for the assessment and management of ambient air quality. Pollutants for which ambient air quality assessment, including emissions from mobile sources, are provided in Annex no. 1, while the requirements for the assessment of sulfur dioxide, nitrogen dioxide, nitrogen oxides, particulate matter PM₁₀ and PM_{2.5}, lead, benzene, carbon monoxide, ozone, arsenic, cadmium, nickel and benzo (a) pyrene, are provided in Annex no. 3.

Biodiversity and Protected Areas

Regarding the conservation of biodiversity and the protected areas regime, Romania has joined the following European and international conventions:

- Convention on Biological Diversity adopted at the United Nations Conference on Environment and Development held in Rio de Janeiro in 1992, ratified by Law no. 58/1994 published in the Official Gazette on 2 August 1994;

- Convention on Wetlands of International Importance especially as Waterfowl Habitat, signed at Ramsar in 1971 and amended by the Paris Protocol of 3 December 1982, to which Romania adhered by Law no. 5/1991 published in the Official Gazette on 26 January 1991;
- Convention on the Conservation of Wildlife and Natural Habitats in Europe, adopted in Berne in 1979, to which Romania adhered by Law no. 13/1993 published in the Official Gazette on 25 March 1993.

The natural protected areas of national or international interest were identified by Law no. 5/2000 with subsequent modifications approving the National Territory Plan - Section III - Protected Areas, which provides the obligation of the central and local public administration authorities to indicate these areas in the territory planning documentation at the levels of counties, municipalities, towns and communes.

By GD no. 2151/2004 on the establishment of the protected natural habitat regime for new areas, a number of national and natural parks have been defined together with scientific reserves, nature monuments, nature reserves and special bird's protection areas. The list of protected natural areas was subsequently extended by GD no. 1581/2005, GD nr. 1143/2007, GD no. 1066/2010 and GD no. 1217/2010.

In 2007, Directive 92/43/EEC (Habitats Directive) and Directive 2009/147/EC (Birds Directive) were transposed into Romanian legislation by the Government Emergency Ordinance - GEO no. 57/2007 on the regime of natural protected areas, conservation of natural habitats, wild flora and fauna, approved by Law no. 49/2011, with subsequent amendments and completions.

GEO no. 57/2007 establishes the categories of natural protected areas, natural habitats types, wild flora and fauna species and other natural heritage assets subject to the special protection, conservation and sustainable use regime, their identification, establishment, organization, development, and regime of the national network of protected natural areas, their management, protection and conservation measures, responsibilities and attributions. Also, it provides that if a project subject to an environmental impact assessment could significantly affect a protected natural area of Community interest, it must also be subject to an appropriate assessment of the potential effects on the protected natural area of Community interest, taking into account its conservation objectives.

- Neptun Deep project falls under the provisions of Article 28 from GEO no. 57/2007.

Starting with April 2020 Ministry of Environment, Waters and Forests approved the Order no. 488/2020 on the approval of the List of endangered marine species on the Romanian Black Sea coast for their protection and conservation.

Waste Management

The Waste Directive 2008/98/EC issued by European Parliament and Council is transposed into Romanian legislation by the Emergency Ordinance no. 92/2021 concerning waste regime issued by the Romanian Government. The purpose of this regulatory document is to ensure a high level of environmental and public health protection by implementation of specific measures for:

- Prevention and mitigation of waste generation and proper waste management;
- Mitigation of negative impacts generated by waste generation and management;
- Mitigation of overall effects generated by use of resources and increasing the efficiency of their use.

This regulatory document includes provisions on waste hierarchy, waste classification and codification, waste prevention, waste recovery, waste disposal, waste management, waste evidence and reporting, and other waste related topics.

Neptun Deep Project must comply with the specific requirements of this waste management regulation during all project phases.

Offshore works

The main normative acts regulating the offshore works within the Romanian Black Sea territorial waters include:

- Law no. 256/2018 on some measures necessary for the implementation of oil operations by holders of oil agreements on offshore oil perimeters (*Offshore Law*) amended by GEO no. 106/2020;
- Law no. 165/2016 on the safety of offshore oil operations amended by GO no. 11/2017, GO no. 17/2017 and Law no. 203/2018.

Law no. 256/2018 establishes some necessary measures for the implementation of oil operations of exploration, development, exploitation, and abandonment of oil fields, as well as works / wells related to oil operations, carried out by the holders of oil agreements on offshore oil perimeters, in accordance with the provisions of the oil agreements concluded between the holders and the National Agency for Mineral Resources (ANRM).

Law no. 165/2016 aims to establish the minimum requirements necessary to prevent major accidents and limit the consequences of such accidents involving oil operations in the Black Sea areas under Romanian jurisdiction.

The International Convention for the Prevention of Pollution from Ships (MARPOL) is the main international convention covering prevention of pollution of the marine environment by ships from operational or accidental causes.

The MARPOL Convention was adopted on 2nd of November 1973 at IMO. The Protocol of 1978 was adopted in response to a spate of tanker accidents in 1976-1977. As the 1973 MARPOL Convention had not yet entered into force, the 1978 MARPOL Protocol absorbed the parent Convention. The combined instrument entered into force on 2nd of October 1983. In 1997, a Protocol was adopted to amend the Convention and a new Annex VI was added which entered into force on 19th of May 2005. MARPOL has been updated by amendments through the years. Romania acceded to the protocol by Law no. 6/1993.

The Convention includes regulations aimed at preventing and minimizing pollution from ships - both accidental pollution and that from routine operations - and currently includes six technical Annexes.

The Convention on the protection of the Black Sea against pollution from 21st of April 1992 aims to make progress in protecting the Black Sea marine environment and conserving its living resources in the territorial sea and the EEZ of each contracting party.

Participants at the convention are Republic of Bulgaria, Georgia, Romania, Russian Federation (in force since 15th of January 1994), Republic of Turkey (in force since 29th of March 1994), and Ukraine (in force since 14th of April 1994).

The Convention contains three Protocols:

- Protocol on the protection of the marine environment of the Black Sea against pollution from land-based sources;
- Protocol on cooperation in combating pollution of oil and other harmful substances by the Black Sea marine environment in emergency situations;
- Protocol on the protection of the Black Sea marine environment against landfill pollution.

The Marine Strategy Framework Directive (2008/56/EC) (MSFD) was transposed into national legislation by GEO no. 71/2010 on the establishment of the Marine Environment Strategy and adopted by Law no. 6/2011 approving the GEO no. 71/2010 on establishing the strategy for the marine environment amended by Law no. 205/2013 and Law no. 279/2018.

Romania, as an EU member state, must fulfill the obligations stipulated in the Marine Strategy Framework Directive, respectively to make every effort to improve and maintain the good state of the Black Sea marine ecosystem.

9.2 Indication on any plan/scheme/strategy/planning document from which the project is part, including the approving regulatory document

Neptun Deep is a proposed offshore natural gas development in the Neptun Deep block, located in the Romanian portion of the Black Sea. ExxonMobil, as the operator, and OMV Petrom, as a 50% partner are the participants in the Neptun Deep project (confirmation letter from ANRM is attached in Appendix A). OMV Petrom holds the rights to explore for hydrocarbons in the XIX Neptun Deep license. The purpose of the two Beneficiaries is to sustainably develop the gas resources of the Neptun Deep fields, with a focus on environmental protection during development and operation of the facilities, objective aligned with the Romanian Energy Strategy 2019-2030, with an outlook to 2050.

For the onshore component, the Beneficiaries have developed the PUZ – Zonal Urbanism Plan for Construction of the NGMS, Control Center, Access Road and Underground Pipe Laying for Natural Gas Transport, for which it has obtained Decision no 100 dated 16th of November 2020 issued by the Tuzla City Hall Local Council.

10. Works for organization of construction site

Temporary facilities/works are required for installation/construction of above-mentioned onshore permanent facilities, and these include:

- Temporary road railway crossing;
- NGMS and CCR Construction Works Site Organization, including administrative containers, parking area, precommissioning pad, material and chemical storage area, and temporary construction road;
- Microtunneling Construction Works Site Organization, including launch shaft area, pipeline stringing yard, pipe storage area, welding area and temporary access roads to the construction works site.

The main characteristics of the onshore temporary works that are subject of this presentation memorandum are summarized in the following paragraphs. The onshore construction works sites and other temporary facilities are shown in Appendix C.

10.1 Description of the works required for the organization of the construction site

10.1.1 Temporary Road Railway Crossing

A temporary road railway crossing will be constructed at km 248+983.25 of Constanta – Mangalia railway line to support pipeline shore crossing and other construction activities on the east side of the railroad tracks (Appendix C).

The communal road DC 4, railway line Constanta – Mangalia and local earth road De 277 will be impacted by the temporary railroad crossing works. The temporary railroad crossing and related connections to local roads (communal road DC4 and local earth road De277) will occupy a total surface of 1,030 m².

The temporary railway crossing will be made with reinforced concrete slabs approved by Romanian Railway Authority (AFER) in accordance with the provisions of Instruction no. I314 *"Instruction of norms and tolerances for the construction and maintenance of the railway"*. The execution of the working corridor will include removal of the vegetal soil layer from outside the railway embankment on a thickness of 30 cm.

The temporary railroad crossing will be removed once construction is complete.

10.1.2 NGMS and CCR Construction Works Site

A construction works site organization will be required to support construction/installation of the NGMS, CCR and other related facilities.

The following is a listing of main areas and facilities included at the NGMS and CCR construction works site organization, as shown on the Site Organization and Temporary Works Layout Plan (Appendix C):

- A temporary precommissioning pad of 5,379 m² that also accommodates:
 - A material storage indoor warehouse (19.480 m x 12.110 m, respectively 8 containers of 2.435 x 12.110 m) installed within the temporary precommissioning pad area;
 - A chemical storage fenced area of 48 m² installed within the temporary precommissioning pad area;
 - A fuel tank of 7.5 m³ installed within the temporary precommissioning pad area;
- An area having a surface of 3,261 m² that includes the following facilities:
 - A containerized administrative area, including contractor office area, client office area, dining hall area, first aid area, toilet and shower facilities and a guard house area;
 - A temporary site organization road of 408 m²;
 - A wastewater septic tank of 20 m³ volume;
 - A water supply tank of 12 m³ volume;
- A temporary parking area of 1,130 m².

The total surface occupied by the construction works site organization (including administrative containers, parking area, pre-commissioning pad, construction road, etc.) is 9,770 m².

The infrastructure of temporary areas inside the NGMS Construction Site (administrative containerized area, temporary parking area, precommissioning area, material and chemical storage area, construction road) will include:

- Removal of the vegetal soil layer on a thickness of 30 cm;
- Improvement of the terrain foundation by desensitization to wetting, including:
 - Removal by digging of the loess layer on approximately 50 cm;
 - Preparation of the so-called "loss pillow" by reusing the excavated material with re-operation in successive layers of 15-20 cm thickness and compaction;
- Installation of a waterproof geotextile;
- Installation of 20 cm layer of compacted ballast optimal mixing sort 0-63 mm;
- Installation of 20 cm layer of compacted crushed stone, sort 0-63 mm;
- Installation of 10 cm layer of penetrated macadam.

Drainage slopes will be ensured to prevent onsite stagnation of rainwater.

Perimeter security fencing will be installed around construction works site organization. The fence will be made of 60 x 40 x 4 steel poles positioned at 2.5 m apart, in concrete foundation. Between the poles will be fixed the edged mesh made of galvanized steel wire 2,000 x 2,500 mm with 4 mm diameter, meshes size 200 x 50 mm. Catching of galvanized wire mesh will be with TAR system (galvanized edged fence panel fixing clamp) or similar, corner area requiring catching on both directions.

The security fencing will have pedestrian gates and two pieces car access gates with the poles located at 4 m distance. The gates will be provided with locking system. The gate hinges will be welded and provided with anti-lifting devices. The steel elements, other than those entirely embedded in concrete or hot deep galvanized, will be prepared and treated anticorrosive. Cars access gates will have a personnel emergency exit gate each.

10.1.3 Microtunnelling Construction Site

Temporary facilities/works are required for execution of shore crossing underground microtunnel and installation of GPP and FOC into the tunnel.

The total surface temporarily occupied by the microtunneling execution related facilities/works is **24,639 m²**. The main areas (Appendix C) required for execution of shore crossing underground microtunnel and installation of GPP and FOC include:

- The main microtunneling construction site (including launch shaft area) of 5,850 m²;
- Pipe storage area of 450 m²; and
- Pipeline stringing yard (also includes a welding area) of 18,339 m²;
- Temporary access roads to support construction access to microtunneling site and pipeline stringing and storage areas of 9,499 m².

The infrastructure works required for execution of above-mentioned temporary areas (microtunnel construction site, pipeline stringing yard, temporary construction access roads) will include:

- Removal of the vegetal soil layer on a thickness of 30 cm;
- Improvement of the terrain foundation by desensitization to wetting, including:
 - Removal by digging of the loess layer on approximately 50 cm;
 - Preparation of the so-called "loss pillow" by reusing the excavated material with re-operation in successive layers of 15-20 cm thickness and compaction;
- Installation of a waterproof geotextile;
- Installation of 20 cm layer of compacted ballast optimal mixing sort 0-63 mm;
- Installation of 20 cm layer of compacted crushed stone, sort 0-63 mm;
- Installation of 10 cm layer of penetrated macadam.

Drainage slopes will be ensured to prevent onsite stagnation of rainwater.

A description of each above-mentioned temporary area is presented below.

Microtunneling Construction Works Site (Launch Shaft Area)

The main facilities/equipment installed at the fenced microtunneling construction site (Appendix C) include:

- Tunnel Boring Machine steering cabin of 2.4 width x 4.5 m length;
- Jacking Pipe Storage area of 16.5 m width x 17 m length;
- Gantry Crane of 12 m maximum height for unloading and installation of pipes;
- Hydraulic Power Unit of 2.35 m width x 5.6 m length;
- Diesel Generators of 2.35 m width x 5.6 m length;
- Recycling unit of 9.5 m width x 16 m length;
- Two Bentonite Silos of 2.85 m diameter and 21 m maximum height;
- Mixing Unit of 2.45 m width x 12 m length;
- Buffer Tank of 2.45 m width x 6 m length;
- Water Storage Tank of 15 m diameter and 1,000 m³ volume;
- Pump Unit of 2.45 width x 6 m length;
- Workshop container area of 6.055 m x 29.220 m, including 12 containers of 2.435 m width x 6.055 m length each;
- Jacking equipment, storage container area of 6.055 m x 9.740 m, including 4 containers of 2.435 m width x 6.055 m length each;
- Office, sanitary facilities, first aid containers area of 12.110 m x 14.610 m, including 12 containers of 2.435 m width x 6.055 m length each;
- Crew containers area of 12.110 m x 7.305 m, including 6 containers of 2.435 m width x 6.055 m length each;
- Two containerized steel tanks of 30 m³ volume each for collection of excess water from drilling fluid preparation; each tank will have the following dimensions: 6 m x 2.5 m x 2 m.

A storage area of 6,120 m² (255 m x 24 m size) will be installed for storage of vegetal soil excavated from the entire site (a volume of 18,400 m³ vegetal soil). The storage area will be installed to the south of the pipeline installation corridor.

A storage area of 1,100 m² (55 m x 20 m size) will be installed adjacent to the launch shaft area for storage of excavated soil (a volume of approximately 3,270 m³) from the construction of launch shaft. From the total volume of excavated soil, a volume of approximately 1900 m³ will be used for backfilling of the shaft at the completion of construction works and the remaining volume of approximately 1,370 m³ will be transported and disposed to a licensed disposal facility.

The drilling cuttings resulted from the tunneling process will be separated from the drilling fluid in the separation plant (recycling unit) and will be temporarily stored on site within separation plant area before being transported and disposed to a licensed disposal facility. The dumping area within the separation plant will be surrounded by a berm and sealed with a PE foil to prevent residual drilling fluid draining to the soil. Alternatively, the dumping area can be constructed with a concrete floor.

Perimeter security fencing will be installed around the main construction site organization. The fencing system of the microtunnel construction site will be similar with the one installed at the NGMS construction works site. The microtunnel/launch shaft construction site will be provided with cars access sliding gate.

Pipe storage area

Individual pipes will be transported to site for temporary storage within pipe storage area. The pipe storage area (30 m length x 15 m width) will be installed on a total surface of 450 m². No perimetral fencing will be provided around the pipe storage area.

The pipes of 12 m length will be stored in two rows stack and a lifting equipment will be used for pipe handling. The lifting equipment (truck crane) will have a maximum arm height of 20 m. The surface inside pipe storage area will be covered with crushed stone with penetrated macadam. A temporary load bearing foundation made of sand/gravel with wood mats of 30 cm thickness will be installed to support pipe storage.

Pipeline stringing yard

During the tunnel construction, assembly of the pipeline for its installation into the tunnel will be carried out inside the string yard area. The pipeline stringing yard will be installed on a total surface of 18,339 m². No perimetral fencing will be provided around the pipeline stringing yard. The pipeline stringing yard will also accommodate the following areas/facilities:

- A welding area of 100 m² (20 m length x 5 m width);
- A tools storage area of 75 m² (15 m length x 5 m width);
- Office containers of 12.110 m x 2.435 m (2 containers, each of 6.055 m length x 2.435 m width).

The limited overall string yard length requires the preparation of the pipeline as five partial strings. During the installation process, these strings will be moved laterally and welded together at the forward end of the string yard.

The surfaces inside the stringing yard will be covered by crushed stone with penetrated macadam.

Temporary construction access roads

The temporary roads will be constructed of crushed stone with penetrated macadam and will provide access to the microtunnel execution area and pipeline stringing and storage area. The total surface temporarily occupied by the construction site access roads is **9,499 m²**. The temporary access roads will have a total length of 1,357 m and a width of 7 m along the entire road length.

The temporary roads will be removed once construction is complete and the land will be restored to its original state.

10.2 Location of the construction site organization

The temporary railroad crossing will be located immediately east of the NGMS and CCR site. Stereo 70 and WGS84/TM30NE coordinates of the area impacted by the temporary railroad crossing are listed in Table 32.

Table 32 – Temporary Railroad Crossing Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281611.3	792478.5	4870004.900	391232.310
2	281589.6	792478.3	4869983.270	391230.780
3	281576.7	792525.6	4869967.500	391277.160
4	281598.5	792525.6	4869989.250	391278.490

The NGMS and CCR construction works site will be located within the S1 site (cadastral number 109216) owned by OMV Petrom with superficies rights for EMEPRL. Stereo 70 and WGS84/TM30NE coordinates of the area impacted by the NGMS and CCR construction works site are listed in Table 33.

Table 33 – NGMS and CCR Construction Works Site Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281621.0	792384.6	4870020.330	391139.260
2	281594.8	792476.0	4869988.600	391228.800
3	281515.6	792476.0	4869909.610	391223.950
4	281516.3	792364.0	4869917.180	391112.290
5	281566.7	792364.0	4869967.440	391115.380
6	281566.7	792374.2	4869966.820	391125.550
7	281592.0	792381.1	4869991.620	391133.990
8	281593.2	792377.1	4869993.070	391130.070

The temporary facilities/works (microtunnel construction site, pipeline stringing yard, pipeline storage area, and temporary access roads) required for microtunnel execution and installation of GPP and FOC into the tunnel will be mostly installed within the S3 site (cadastral number 109659) and S4 site (cadastral numbers 109792 and 100819) owned by OMV Petrom S.A. with superficies rights for EMEPRL. Local earth road De259/4 will be partially impacted by the temporary construction works site facilities.

Stereo 70 and WGS84/TM30NE coordinates of the main microtunnel construction fenced site are listed in Table 34.

Table 34 – Main Microtunnel Construction Works Site Coordinates

No	Stereo 70 Coordinates		WGS84 / TM30NE Coordinates	
	North (m)	East (m)	North (m)	East (m)
1	281522.9	793181.6	4869873.620	391928.080
2	281522.4	793246.7	4869869.130	391992.970

10.3 Describe the environmental impact of the construction site organization works

The potential impacts on the environmental components of the construction/installation works for construction sites organizations are:

- Water and soil pollution due to accidental leakage of fuel, oil, chemicals, and other liquids from construction vehicles and equipment;
- Air pollution with particulate matter (dust) due to earthwork movements (terrain cleaning, soil excavation, fillings), traffic on unpaved roads and construction materials (ballast, sand);
- Air pollution with NO_x, SO₂, CO, particulate matter, heavy metals, (Cd, Ni, Cr) and HAP as a result of the internal combustion engines vehicles and equipment used;
- Discomfort for the local population and for the tourists by noise and vibration produced by construction/installation vehicles and equipment;
- Accidents as a result of people accessing the works site;
- Employment of local population during construction sites works;
- Disturbance of fauna species activity by noise and vibration produced by the construction/installation vehicles and equipment;

- Habitat loss for fauna species, especially feeding areas, due to the use of land areas during construction sites works;
- Disturbance of fauna species activity, due to human presence, noise, and lighting, especially during breeding and nesting periods;
- Increase in fauna species mortality mainly in the case of species with reduced mobility, such as amphibians and reptiles, following interventions by excavations or compacting of soil, as well as a result of collision with the traffic;
- Visual impact on the tourist and locals due to the presence of the onshore construction equipment and vehicles;
- Disturbance of the natural landscape during construction sites works.

Compliance with the safety measures provided in the project design and a proper maintenance program for vehicles and equipment will reduce to a minimum the risk of accidental leakage of fuel, chemicals and other liquids during construction sites works. This potential impact on water and soil will be negative, direct and on short term.

Due to the temporary nature of construction sites works and to the relatively small scale, it is considered that the potential impact of the construction sites works on the air quality in the area will be negative, direct and on short term.

Work restrictions (working outside the tourist season) during construction phase due to the onshore project site proximity to residential areas and touristic areas will be implemented to reduce the potential impact. Noise abatement and dust control measures during construction sites works phase will be implemented. This potential impact will be negative, direct and on short term.

Construction works sites will be fenced and warning signs / safety signaling will be installed in the area of the construction sites. People living or working in close proximity to the onshore construction works sites will be informed about the nature, timing, and duration of construction activities. The potential impact on population and human health due people accessing the works site will be negative, direct and on short term.

Romanian companies and local population will be employed during onshore construction/installation works as much as possible. This will contribute on short term to the local economy and to lower the unemployment in the project area. The potential impact will be positive, direct and on short term.

The presence of disturbing factors for the fauna in the area during construction sites works will be short term. The potential impact of the presence of vehicles equipment and personnel will be negative direct and indirect and on short term.

All the excavation, realized on site during construction sites works, deep enough to represent a danger to local fauna will be fenced with plastic mesh to stop the access of fauna to the excavations and will be fitted with egress slopes, if feasible. The potential impact due to land excavations will be negative, indirect and on short term.

At the completion of construction works, the land temporary impacted by the construction works will be reinstated to its original conditions. The potential impact due to land occupied by the construction sites works will be negative, indirect and on short term.

Vehicles used during construction sites works will have speed limits on site thus may limit the danger of collision with the local fauna. The potential impact will be negative, direct and on short term.

The construction sites works will be realized with restrictions (working outside the tourist season) due to the onshore project site proximity to residential areas and touristic areas. All the terrain disturbed by the temporary onshore construction works will be return to the initial state at the end of the works and the temporary facilities removed. These measures will mitigate the potential impact on landscape and visual environment. The potential impact of onshore construction sites works will be negative, direct and on short term.

10.4 Sources of pollutants and installations for retaining, discharging, and dispersing pollutants in the environment during site construction organization

The main sources of potential pollution for soil and water during construction sites works include:

- Improper management of wastewater resulted during execution of construction sites works (e.g., domestic wastewater generated, produced water resulting from launch shaft and microtunnel execution);
- Improper management of soil resulted from construction site preparation and civil works (e.g., tunnel and launch shaft execution);
- Improper management of waste generated on the construction works sites (e.g., construction waste from microtunnel execution);
- Accidental fuel, oil, chemicals, and other liquids leakage from construction vehicles and equipment.

The construction works sites will be provided with specific construction facilities and measures for protection of environmental features (water, soil, air, etc.), such us: water supply facilities (e.g., fresh water tanks), wastewater management facilities (e.g. domestic wastewater tanks), waste, chemicals and fuels management facilities, and dust suppression measures.

A washing trucks facility will be installed within the proposed access road area before connection with the national road DN 39. ***The washing trucks facility is not part of the project scope described in this technical memorandum and will be subject to a separate permitting procedure.***

A summary of the main facilities and measures included at the construction works site is presented in the paragraphs below.

NGMS and CCR Construction Site

The construction works site will be provided with temporary water supply and storage facilities (freshwater tank of 12 m³ fabricated of galvanized steel, thermally insulated, and electrically heated) supplied by water trucks based on specific agreements signed with certified contractors. No water connections to local utilities network are planned during construction phase. The delivery of water to the sanitary installations of the containers will be done with submersible pumps with built-in electronic control system. The pumps will be pre-equipped with electronic control units with which to perform the start / stop and protection operations in case of lack of water in the tank, preventing pump failure.

The drinking water for staff will be obtained from commercial sources (bottled water).

Temporary wastewater management facilities (e.g., wastewater storage tank of 20 m³) will be available at the construction works site. The wastewater storage tank will be periodically emptied by trucks and transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors. No sewer connections to local utilities are planned.

Power for the NGMS construction works site will be sourced from the local power provider (ENEL) through an electrical power transformer that will be installed on site. The electrical power connection project is not part of

the project scope described in this technical memorandum and will be subject to a separate permitting procedure.

The chemical storage area will be fenced and will have a total surface of 48 m² (8 m length x 6 m width). The chemicals (lube oils, grease, hydraulic fluids and other petroleum products for equipment and vehicles) will be stored on chemical-tight barrels which will be kept on site in minimal quantities and will be supplied as many times as needed.

The fueling of the equipment on site will be done with specialized trucks for this activity. The fuel will be transported on site with tanker trucks by local distributors and will be stored into the fuel tank of 7,5 m³ installed onsite. The fuel tank will be mounted on a steel ledge platform with the possibility of collecting leaks.

Microtunnel Construction Site

The water needs during microtunnel construction/pipeline installation phase include drinking water for staff, sanitary water for site offices and crews (e.g., showers, toilets) and process water for construction/installation works (e.g., tunneling process, pipeline installation and testing, etc.).

The drinking water for staff will be obtained from commercial sources (bottled water).

A freshwater tank of 12 m³ fabricated of galvanized steel, thermally insulated, and electrically heated, will be provided at the microtunneling construction site for domestic/sanitary water use.

A water storage tank of 15 m diameter and 1,000 m³ volume will be installed at microtunnel construction site in order to provide water needs for execution process of shore crossing underground microtunnel.

The temporary water supply and storage facilities will be supplied by water trucks based on specific agreements signed with certified contractors. No water connections to local utilities network are planned during construction phase.

The main wastewater/produced water streams include domestic wastewater (graywater, blackwater) from administrative areas and produced water generated from construction/installation works (e.g., microtunneling, pipeline hydrotesting, etc.).

A domestic wastewater storage tank of 20 m³ volume will be installed at the microtunnel construction site. The wastewater storage tank will be periodically emptied by trucks and wastewater transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors. No sewer connections to local utilities are planned.

Displaced tunnel water (sea water) resulting from tunnel backfilling will be collected on the microtunneling construction site, tested, and drained to the Black Sea via FOC conduit, upon approval of discharge parameters by the authorities.

Three power diesel generators will be installed at the microtunneling construction works site and will provide power to tunneling related equipment and facilities, and administrative offices. One diesel generator will be installed at the pipeline stringing yard and will provide power for pipe assembly related facilities.

The diesel generators will be regularly supplied with fuel from certified fuel tank trucks based on specific agreements signed with certified contractors.

The main sources of potential pollution for air during construction sites works include:

- Particulate matter (dust) due to earthwork movements (terrain cleaning, soil excavation, fillings), traffic on unpaved roads and construction materials (ballast, sand);

- NO_x, SO₂, CO, particulate matter, heavy metals, (Cd, Ni, Cr) and HAP as a result of the internal combustion engines vehicles and equipment used.

Dust measures during construction works phase will be implemented in order to limit the dust emissions due to earthwork movements and traffic on unpaved roads.

The vehicles and equipment used for construction sites works will comply with the national laws and regulation regarding engine exhaust limits and will be equipped with the required exhaust systems (ex. diesel particulate filter, catalytic convertors etc.).

The main sources of potential pollution regarding noise and vibration during construction sites works is represented by the noise and vibration produced by vehicles and equipment (i.e., generators) used.

Noise control measures (i.e., noise panels, mufflers for vehicles and equipment) during construction works phase will be implemented in order to limit the potential impact on population and biodiversity.

The main sources of potential visual and landscape pollution are represented by the temporary construction and works required for construction sites.

Upon completion of the project construction and installation works, site restoration works (e.g., removal/demolition of temporary infrastructure, building, facilities, and equipment installed at the construction works sites; management of wastewater, waste, chemicals and materials in accordance with legal provisions, site rehabilitation and restoration to the original land quality) will be carried out in areas impacted by the onshore construction and installation works. In addition, once access to the shore crossing and beach side of the railroad is no longer required, the temporary rail crossing road will be decommissioned and restored to the initial condition.

10.5 Facilities and measures to control emissions of pollutants into the environment

The main measures and facilities to control and mitigate the emission of pollutants into the environment that will be implemented at the construction works sites are:

- No wastewater treatment or pre-treatment plants will be installed at the onshore construction works sites (NGMS and CCR construction site and microtunnel construction site). The wastewater generated will be collected on site by storage tanks that will be periodically emptied by trucks and wastewater transported to and disposed of at authorized disposal facilities based on specific agreements signed with certified contractors;
- Compliance with the safety measures provided in the project design and a proper maintenance program for vehicles and equipment will reduce to a minimum the risk of accidental leakage of fuel, chemicals and other liquids during construction sites works. In case of accidental leakage, the vehicle/equipment will be turn off until the leakage is remediated, and pollution retention materials will be used to limit the spillage;
- The chemicals will be stored in chemical-tight barrels in minimal quantities in a fenced chemical storage area and will be supplied on site as many times as needed;
- Waste collection spaces will be arranged for selective collection. The waste will be collected and disposed of by authorized companies in compliance with all legal norms in force.
- The temporary roads will be covered with penetrated macadam and dust control measures during construction works phase will be implemented in order to limit the dust emissions;

- The vehicles and equipment used for construction sites works will comply with the national laws and regulation regarding engine exhaust limits and will be equipped with the required exhaust systems (ex. diesel particulate filter, catalytic convertors etc.);
- Vehicles used during construction sites works will have speed limits on site thus may limit the danger of collision with the local fauna;
- Noise abatement measures like noise panels, mufflers for vehicles and equipment will be implemented during construction works phase;
- Work restrictions (working outside the tourist season) during construction phase due to the onshore project site proximity to residential areas and touristic areas will be implemented for certain project components to reduce the potential impact;
- All the excavation, realized on site during construction sites works, deep enough to represent a danger to local fauna will be fenced with plastic mesh to stop the access of fauna to the excavations and will be fitted with egress slopes, if feasible;
- Upon completion of the construction works, the land impacted by the construction works will be reinstated to its original conditions;
- Construction works sites will be fenced and warning signs / safety signaling will be installed in the area of the construction sites;
- People living or working in close proximity to the onshore construction works sites will be informed about the nature, timing, and duration of construction activities.

11. Site restoration works

11.1 Proposed works for site rehabilitation upon completion of the investment, in case of accidents and / or cessation of activity

Upon completion of offshore construction and commissioning, no site restoration works are needed for offshore components of Neptun Deep Project (SWP, drilling centers, flowlines, and offshore production pipeline).

For the onshore components of the Neptun Deep project, upon completion of the construction works several activities will be undertaken for site restoration such as:

Removal of equipment and facilities installed at the NGMS and microtunneling construction works sites

- All the facilities and equipment from NGMS and microtunneling construction works sites represented by containers (office containers, welfare containers, etc.), skid equipment (pumps, generators, etc.) will be loaded by crane onto trailers and transported off site.
- The temporary foundations will be demolished by excavation and breached down with sledgehammers. The resulting concrete waste will be disposed of to an authorized landfill.
- The holes resulted from excavating the temporary foundations will be backfilled with soil, the last 30 cm to surface will be filled with topsoil.

Removal/demolition of the temporary construction infrastructure

- All the temporary construction infrastructure (construction roads, temporary railway crossing, technological platforms, parking areas, storage areas, etc.) will be demolished upon completion of construction works.
- Graders will be used to dismantle the layers of penetrated macadam, gravel and crushed gravel and break the layers consistency.
- The resulting mix of gravel will be load into trucks using front loaders or excavators and transported off site for appropriate disposal or recycling.
- The areas occupied by the temporary infrastructure will be back filled with soil, the last 30 cm to surface will be filled with topsoil.

All areas disturbed by the construction and installation works will be restored by:

- Scarifying, backfilling, and levelling, as appropriate.
- Where contamination is identified, the site will be rehabilitated, and contaminated material will be managed in accordance with legal provisions.
- Site revegetation (use of grass seeds, fertilizers, etc., as appropriate).

The project will operate for an estimated period of 20+ years. At the end of project life, the onshore, shore crossing and offshore facilities will be decommissioned/abandoned (upon requirements) and the sites will be restored to original use. The demolition/decommissioning/abandonment and restoration works will be performed based on a specific plan and in accordance with the specific permitting, construction, and environmental legal provisions and applicable standards/guidelines in force at the end of project life.

Shut down of all production processes will be conducted prior to execution of decommissioning/abandonment works.

The NGMS and CCR sites (including related facilities such as internal roads, technological platforms, etc.) will be decommissioned and the sites will be restored to the original use. The onshore decommissioning and restoration works will include demolition/removal of buildings, facilities, equipment, and utilities, collection and proper management of fluids, wastewater, waste and chemicals, rehabilitation, and restoration to original use of the land impacted by the onshore production facilities.

The GPP and FOC will be decommissioned/abandoned in accordance with legal provisions in force at the project end life. As a minimum, the GPP will be emptied before decommissioning/abandonment.

The offshore facilities (SWP, GPP, FOC, flowlines, umbilicals and other subsea equipment) will be decommissioned/abandoned in accordance with the specific decommissioning/abandonment plan. The main steps of the offshore decommissioning/abandonment include:

- Decommissioning/removal of topsides and jacket from offshore location for recovery or reuse;
- Decommissioning/abandonment of subsea trees, manifolds, flowlines, controls;
- Decommissioning/abandonment of gas production pipeline;
- Decommissioning/abandonment of FOC.

All subsea structures above the mudline are designed such that they can be retrieved upon abandonment in the event that 'abandon in place' is not permitted. Piles and mud mats will not be retrievable, but they can be cut at or below the mudline if required by Romanian regulations for abandonment of the field.

At a minimum when abandoned, the pipelines will be emptied of service fluids, purged, separated from any in-service piping, and effectively sealed.

Records will be maintained of all components that are abandoned in place. Such records will include locations and lengths for each pipe diameter and, where practical, burial depth. When considering abandonment of the pipeline, the uses of the area involved shall be assessed at the time of abandonment to determine if removal of any portions of the pipeline is required.

11.2 Prevention and response in case of accidental pollution

Accidental pollution can occur during construction and installation phase as well as during the operation phase.

Main risks of accidental pollution during construction phase are:

- Onshore:
 - Potential accidental pollution of soil and surface waters (Black Sea) with waste waters from the construction works sites;
 - Potential accidental pollution of soil with fuel and oils from the site construction equipment because of accidental breakdowns and/or leakages;
- Offshore:
 - Potential accidental pollution of surface water (Black Sea) with waste waters from the offshore construction and transport vessels;
 - Potential accidental pollution of surface water (Black Sea) with fuel and oils from the construction vessels because of accidental breakdowns and/or leakages.

Main risks of accidental pollution during operation phase are:

- Onshore:
 - Potential accidental pollution of soil with waste waters from the CCR;
 - Potential accidental pollution of soil with fuel and oils from the maintenance equipment and personnel vehicles as a result of accidental breakdowns and/or leakages;
 - Potential explosion and fire because of accidental gas leaks.
- Offshore:
 - Potential accidental pollution of surface waters (Black Sea) with waste waters from the offshore maintenance and transport vessels;
 - Potential accidental pollution of surface water (Black Sea) with fuel and oils from the maintenance vessels as a result of accidental breakdowns and/or leakages;
 - Potential explosion and fire as a result of accidental gas leaks;

- Potential accidental pollution of surface water (Black Sea) due to jacket leg storage loss of containment due to internal/external corrosion of storage tanks, stress corrosion cracking in MeOH storage tank and collision of supply boat or 3rd party vessel with the jacket leg.

In order to minimize and/or mitigate the risks described above, the following measures will be taken during **construction and installation works**:

- Wastewater spills from construction works sites:
 - During onshore construction, the construction works sites will be provided with temporary wastewater management facilities that will be periodically emptied by trucks and disposed of too authorized disposal facilities based on specific agreements signed with certified contractors. In case of accidental spills from the wastewater system, the use of facilities will be stopped until the leaks are remediated, and the spill will be cleaned up accordingly.
- Fuel and oils leak from the site construction equipment:
 - Preventive maintenance operation will be required for all equipment used during construction and spill absorbent materials will be available on site. In case of accidental spills, the contaminated soil will be excavated and disposed of accordingly to an authorized waste facility.
 - Prior to granting access on construction works sites, all equipment, transport vehicles, cranes, machinery, etc. will be checked for integrity and compliance.
 - The construction equipment will be fueled on site from a 7.5 m³ fuel tank. According to good industry practice, to minimize the leak risk the tank will be provided with double walls and/or be fitted with a secondary containment system capable of retention of the tank entire fuel volume to minimize the leak risk.
- Wastewater spills and fuel and oils leak from offshore construction and installation vessels:
 - The vessels used during offshore construction and installation will comply with MARPOL provisions – Annex IV: Prevention of Pollution by Sewage from Ships and Annex I: Regulations for the Prevention of Pollution by Oil.

In order to minimize and/or mitigate the risks described above the following measures will be taken during **operation**:

- Pollution of soil with waste waters from the CCR:
 - The CCR area will be provided with a standalone domestic wastewater (septic) tank. No sewer connections to local utilities are planned. The domestic wastewater tank will be an underground septic tank for gravity drainage from CCR building facilities. In case of accidental spills from the wastewater system, the use of facilities will be stopped until the leaks are remediated, and the spill will be cleaned up accordingly.
- Pollution of soil with fuel and oils from the maintenance equipment and personnel vehicles:
 - The personnel vehicles will be parked inside CCR fenced site. A rainwater drainage tank will be installed adjacent to the south-east corner of CCR site on a total surface of 25 m². The tank will collect the rainwater that drains through concrete areas inside CCR fenced site. In case of fuel and/or oil leaks from the vehicles, the contaminants will be collected into the rainwater collection tank which will allow a good and easy management and remediation of the spill.

- Explosion and fire because of accidental gas leaks onshore:
 - In case of accidental gas leaks because of a technical malfunction the main risk is represented by an explosion followed by fire. The implementation of a rigorous maintenance schedule will minimize the risk of technical malfunction and since the NGMS is an open-air system, no accumulation of gas can occur thus mitigating the risk of an explosion.
 - The main location for a potential NGMS gas leak accumulation are represented by CCR building and LER. To mitigate the risk of an explosion and fire, the two buildings will be fitted with smoke and gas detectors.
 - In case of a system leak and/or fire at NGMS, the Loss Prevention and Fire Protection Systems will automatically isolate the NGMS system from the production pipeline and the NTS system and will depressurize the NGMS pipes through the NGMS vent stack.
- Wastewater spills and fuel and oils leak from offshore operation vessels:
 - The vessels used during offshore operation phase will comply to MARPOL provisions – Annex IV: Prevention of Pollution by Sewage from Ships and Annex I: Regulations for the Prevention of Pollution by Oil.
- Explosion and fire as a result of accidental gas leaks offshore:
 - In case of a gas leak on the SWP this can accumulate in different areas of the platform (LER, temporary shelter, DEH room, turbine enclosures, essential generator and gas processing and dehydration equipment), resulting in possible explosion and fire.
 - In order to mitigate these risks, the areas mentioned above will be fitted with gas, flame and heat detectors and automated fire suppression systems either gas (LER, DEH room) or water based (turbine enclosure, essential generator).
 - Also, the SWP will be fitted with Facilities Loss Prevention and Fire Protection Systems that has as its objective to minimize the probability and size of potential hydrocarbon and toxic releases, reduce the likelihood of igniting flammable releases, provide early detection of fires, limit event escalation and minimize damage to the environment and limit damage to assets, provide a means for extinguishing incipient fires.
 - In case of a fire, the primary response will be automatic shutdown of the installation, blocking or isolation of hydrocarbons systems, vapor depressurization and activating the gaseous, foam, and/or water mist fire suppression in applicable enclosures and/or areas, as appropriate.
- Jacket leg storage loss of containment - in order to mitigate the risks of jacket leg storage loss of containment, the following design criteria and measures will be taken:
 - Internal corrosion mitigation - a rigorous quality plan for Cathodic Protection and application of coating for jacket leg storage tanks was developed.
 - External corrosion mitigation - it was ensured that the Equipment Strategy and/or SWP Surveillance Plans confirm inclusion of inspection of jacket leg tanks and caisson external inspection in the same campaign as the inspection of above-water riser section.
 - Stress corrosion cracking in MeOH storage tank - a seamless pipe will be used for interconnections and caisson pipe.
 - Mitigation for vessels collision with the jacket - the jacket legs will be equipped with bumpers to minimize consequence due to boat collision. Also, the SWP will have a 500 m exclusion zone

for 3rd parties and will be equipped with an Automatic Identification System to alert 3rd parties about the presence of SWP.

11.3 Restoration of the initial conditions / rehabilitation for future land use

For the offshore site area, no restoration to initial conditions of the land is considered necessary, unless required by regulation.

The site restoration works will mainly include:

- Removal of buildings and facilities installed at the NGMS and CCR;
- Clearing the land of all materials and categories of waste;
- Removal/demolition of the technological platforms, parking areas, storage areas, etc.) by excavating the gravel, crushed stone, and penetrated macadam layers, etc.;
- Where contamination is identified, the site will be rehabilitated, and contaminated material will be managed in accordance with legal provisions;
- Rehabilitation (scarifying, backfilling, levelling as appropriate) of all disturbed areas with the last 30 cm to natural terrain level filled with topsoil.
- Site revegetation (use of grass seeds, fertilizers, as appropriate);
- Performance of a pedological study to confirm the soil quality class.

The restoration works will be carried out by the appointed Contractors, under direct supervision of the Beneficiary, and will be executed in compliance with the relevant national permitting and environmental regulations in force at that time.

12. Information on natural protected areas of community interest

12.1 Location of the project towards natural protected areas of community interest. Name and code of protected areas of community interest

12.1.1 Onshore site

The closest natural protected areas of community interest (Natura 2000 sites) to the onshore location of the project (sites S1, S3 and S4 owned by Project Beneficiaries), potentially impacted by its implementation, are represented by ROSPA0076 Marea Neagră (Black Sea) and ROSCI0273 Zona marină de la Capul Tuzla (Marine area from Tuzla cape), located at about 60 m east from the onshore area of the project (Figure no. 20). The closest part of the project to the Natura 2000 sites is represented by the corridor where the underground production pipeline will be executed.

Other Natura 2000 sites are located more than 3 km from the onshore site at the project. No effects generated by the project likely to impact these sites have been identified.

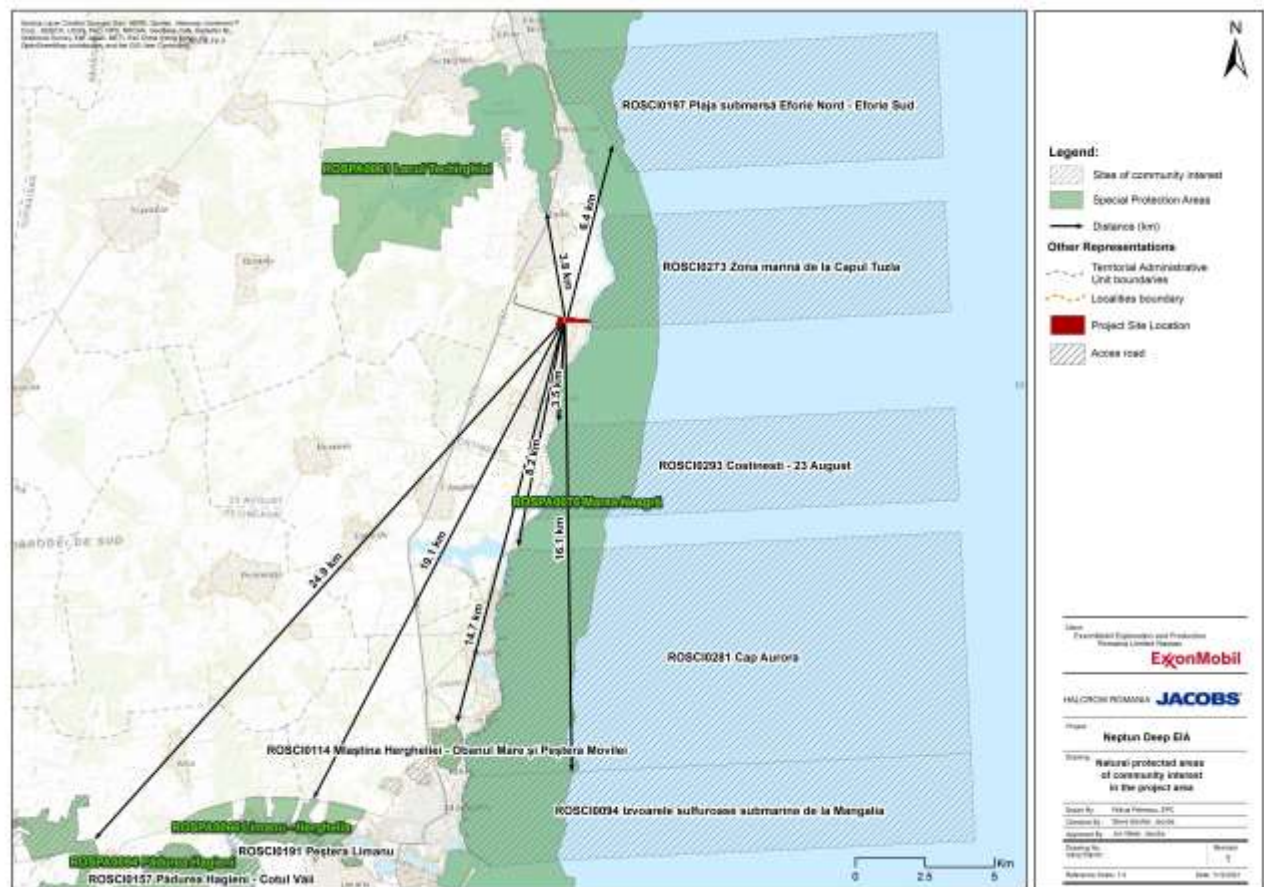

Figure 20 – Location of the onshore section of the project in relation to the Natura 2000 sites

12.1.2 Coastal and Offshore site

Along the Romanian coast there are nine sites of community interest and a special area for birds (Figure no. 21). Based on the description of the environmental aspects that may be potentially impacted by the project, as presented in Chapter 7, there are only two sites that will be impacted by the implementation of the project, respectively: ROSCI0273 Zona marină de la Capul Tuzla that is crossed by the GPP and FOC microtunnel (Figure no. 22) in the southwest corner on a length of about 600 m, and ROSPA0076 Marea Neagră that is crossed by GPP and FOC over a length of approx. 2.5 km. The rest of the protected areas are located at enough distance not to be impacted by the project activities.

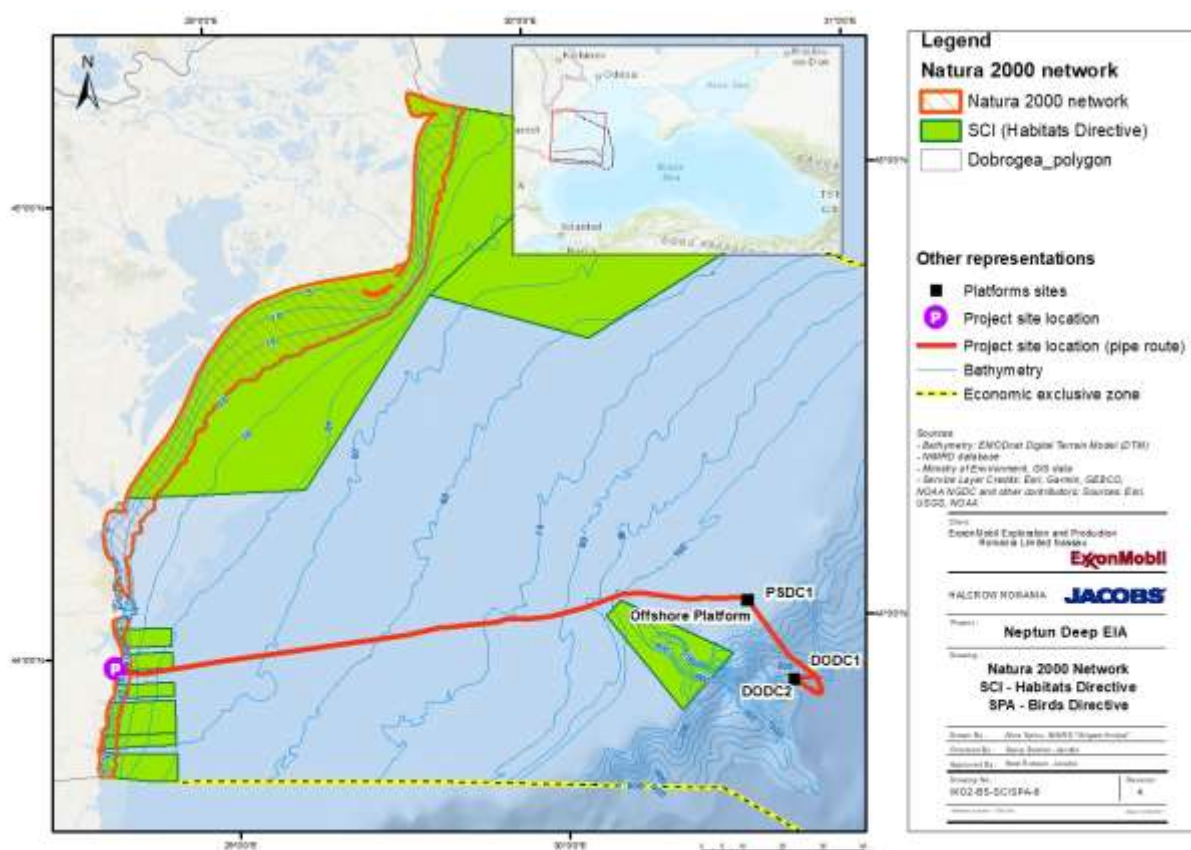

Figure 21 – Natura 2000 sites from project area

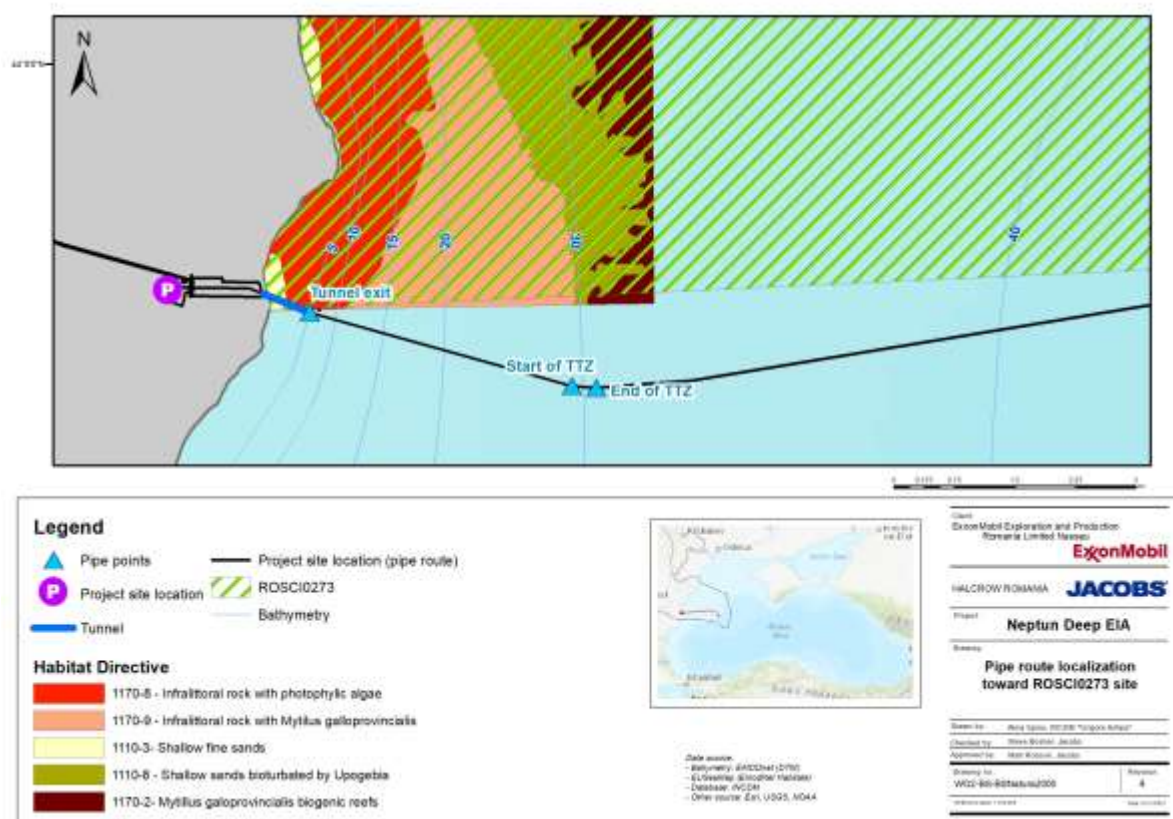

Figure 22 – Location of the shore crossing microtunnel in relation with ROSCI0273 Natura 2000 site

12.2 Justification of the direct link of the project and its need for the conservation management of the protected natural areas of community interest

The project is not directly related to the management of the conservation of natural protected areas of community interest.

12.3 Presence and number / areas covered by species and habitats of community interest in the project area

12.3.1 General Elements

The information presented in this Section is based on data provided by the latest standard data forms of Natura 2000 sites, Site management plans, specific conservation objectives prepared for the sites, publicly available information and field data and information collection activities.

12.3.1.1 ROSCI0273 Zona marina de la Capul Tuzla

Located to the north and east of the project, ROSCI0273 - Zona marină Capul Tuzla is a Site of Community Importance, according to the Habitats Directive 92/43 / EEC, established by Decision 2009/92 / EC, that originally covered an area of 1,738 ha.

Through Order no. 46/2016 of the Ministry of Environment, Waters and Forests, regarding natural protected area regime and the establishment of Sites of Community Importance as part of the European ecological network Natura 2000 in Romania, the total area of ROSCI0273 site increased to 4,946.8 ha.

Cape Tuzla is a high cliff with access to the sea that continues with a rocky underwater promontory. The marine habitats for which the site was declared are of particular importance: reefs, sandbanks permanently covered by a small layer of seawater, sands and swampy areas not covered by refluxing seawater (Table no. 38).

In the Cape Tuzla area, the rocky reef bottom has the largest extension to the offshore area and the most varied and rugged relief in the Romanian sector of the Black Sea. Therefore, it contains the most diverse range of microhabitats of this type and, consequently, a very diverse aquatic fauna and flora. The area is not yet affected by major anthropogenic impacts and is not favorable for navigation due to the very rugged underwater relief.

The species mentioned by the Article 4 of Directive 2009/147/EC and the species listed in the Annex II of Directive 92/43/EEC are presented in the Table no. 39.

Table 38 – Habitat types present within the site (information from NATURA 2000 - STANDARD DATA FORM updated in September 2021)

No.	Habitat type	Surface (ha)
1	1110 Sandbanks which are slightly covered by sea water all the time	450
2	1140 Mudflats and sandflats not covered by seawater at low tide	2
3	1170 Reefs	1285
4	8330 Submerged or partially submerged sea caves	0.7

Table 39 – Species listed in the Article 4 of Directive 2009/147/EC and species listed in Annex II of Directive 92/43/EEC (information from NATURA 2000 - STANDARD DATA FORM updated in September 2021)

No	Species code	Scientific name	Population information		
			Type of presence	Min.	Max.
1	4125	<i>Alosa immaculata</i>	Permanent	100	1000
2	4127	<i>Alosa tanaica</i>	Permanent		1000
3	1351	<i>Phocoena phocoena relicta</i>	Permanent/ concentrations	5	20
4	1349	<i>Tursiops truncatus ponticus</i>	Permanent/ concentrations	5	20

Management plan

The site has a management plan approved by the Order no. 1433/2016 of the Ministry of Environment, Waters and Forests. However, the plan covers only the old smaller surface site of 1,738 ha.

Specific conservation objectives

For the ROSC10273 Natura 2000 site, the National Agency for Natural Protected Areas (ANANP) established the Specific Conservation Objectives, approved by Decision no. 490 / 06.10.2021 (attached in Annex A).

12.3.1.2 ROSPA0076 Marea Neagră

The site is located in the coastal area of Neptun Deep Project, and is crossed for a length of 2,5 km. ROSPA0076 Black Sea represents a Site of Community Importance, according to the 79/409/EEC Birds Directive, directly nominated Special Protection Area (SPA) for birds through Governmental Decision no. 1284/2007 regarding the declaration of avifaunistic protected areas as an integrating part of the Natura 2000 European ecological network in Romania. The site has a total surface of 149.143,9 ha.

This site accommodates an important flocks of protected bird species (Table no. 40). The site is important only during migration and wintering of birds. During the migration period, the site hosts more than 20,000 specimens of pond birds.

Table 40 – Birds species and regular migration birds listed by the Annex I of Directive 2009/147/EC (information from NATURA 2000 - STANDARD DATA FORM updated on September 2021)

No	Code	Scientific Name	Population information

Management plan

The site has a management plan approved through Order no. 1197/2016 of the Ministry of Environment, Waters and Forests.

Specific conservation objectives

For the ROSPA0076 Natura 2000 site, ANANP established the Specific Conservation Objectives, approved by Decision no. 535 / 05.11.2020 (attached in Annex A).

12.3.2 Habitats and species of community interest in Natura 2000 sites in the project area

Marine habitats of community interest

1110-3 Shallow fine sands (Figure no. 23) - Along the Romanian coast, this habitat occurs from the Danube outflow down to Vama Veche, wherever sandy beaches are found. The substrate is made of fine sands mixed with shell and pebble debris, stretching out from shore to the 5-6 m isobath. To the south, at Tuzla, Mangalia, under a more stable salinity regime, this habitat is characterised by the biocenosis of *Donax trunculus*, with abundant populations of this bivalve. Due to the high energy environment, the associated fauna is not very diverse, with only the gastropod *Tritia nerite* and the crustaceans *Liocarcinus vernalis* and *Diogenes pugilator*, although abundances may be higher.

Figure 23 – 1110-3 Shallow fine sands (photo: A. Filimon)

1110-4 Well sorted sands (Figure no. 24) - This habitat is located immediately adjacent to shallow fine sands, from 5-6 m to 10-15 m depth. The substrate comprises homogenous granulometry sands, which are less affected by wave movement. The silt content of the sediment increases with depth. The typical species are the molluscs *Chamelea gallina*, *Tellina tenuis*, *Anadara kagoshimensis*, *Cerastoderma glaucum*, *Tritia neritea*, *Tritia nitida*; the crustaceans *Liocarcinus vernalis* and *Diogenes pugilator*, the fish *Gymnammodytes cicerelus*, *Trachinus draco*, *Uranoscopus scaber*, *Callionymus sp.*, and *Pomatoschistus sp.*

Figure 24 – 1110-3 Well sorted sands (after: Zaharia et al., 2008)

1110-5 Wave-lashed coarse sands and fine gravels (Figure no. 25) - They are found in the small bays of exposed natural rocky coasts and do not exceed a few tens of centimeters deep. It is in the form of very narrow submerged beaches, formed by coarse sand and gravel from the degradation of the rock, continuously reshaped by waves.

Figure 25 – 1110-5 Wave-lashed coarse sands and fine gravels (after: Zaharia et al., 2008)

1110-6 Infralittoral cobbles (Figure no. 26) - They are found in places, along the naturally exposed rocky coasts, between the depths of 0.5 and 2.5 m. Such submerged beaches are partially covered with round and flattened stones, buckets, usually calcareous, white, shaped by waves. . They occur only in areas with strong hydrodynamics and are populated by isopod crustaceans, amphipods and *Xantho poressa* crab. During periods of calm, benthic diatoms develop abundantly on cobblestone and are eaten by mullets (*Liza spp.*).

Figure 26 – 1110-6 Infralittoral cobbles (after: Zaharia et al., 2008)

1110-9 Sandy muds and muddy sands bioturbated by Upogebia (Figure no. 27) - This habitat forms a continuous belt along the Romanian Black Sea coast, on sandy muds located between 10-30 m in depth. The substrate is riddled with numerous galleries of the filter-feeding decapod crustacean *Upogebia pusilla*, which penetrate 0.2-1.0 m deep, depending on the consistency of the sediment. The density of filter-feeding mollusks occurring in this habitat is decreased through competition and larval predation by *Upogebia*. Other species, especially small commensals which inhabit the burrows of *Upogebia*, are facilitated.

Figure 27 – 1110-9 Sandy muds and muddy sands bioturbated by Upogebia (photo: A. Filimon)

1140-1 Supralittoral sands with or without fast-drying drift lines (Figure no. 28) - It occupies the part of the beach that is not watered by waves except during storms. The deposits are made of materials brought from the sea, of plant origin (tree trunks, pieces of wood, remains of terrestrial and marsh plants, algae, leaves), animal (carcasses of aquatic animals, insects, drowned terrestrial animals) or anthropogenic (waste solids), as well as dense foam from marine plankton. The fauna consists of isopod crustaceans and especially insects.

Figure 28 – 1140-1 Supralittoral sands with or without fast-drying drift lines (after: Zaharia et al., 2008)

1140-2 Supralittoral slow-drying drift lines (Figure no. 29) - Present on the shores formed by boulders or cobblestones beaches, Agigea, Tuzla, Mangalia, Vama Veche. It occupies the part that is not watered by waves except during storms of the shores formed by boulders or cobblestones beaches. They accumulate in the spaces between them the residues described above, but also the moisture, so that the deposits are difficult to dry. Fauna is made up of detritivores, decomposers and their predators.

Figure 29 – 1140-2 Supralittoral slow-drying drift lines (after: Zaharia et al., 2008)

1140-3 Midlittoral sands (Figure no. 30) - Present on all sandy beaches on the Romanian coast. It occupies the strip of sand on the shore, on which the waves break. Depending on the degree of agitation of the sea, it can be wider or narrower, but in the Black Sea it is limited anyway due to the negligible amplitude of the tides. The sand is loose, coarse and mixed with the remains of shells and pebbles. The characteristic species for the beaches in the south of the Romanian coast (Eforie, Costinesti, Mangalia, Vama Veche) is the bivalve *Donacilla cornea*, and for the beaches on the Danube Delta the amphipod *Euxinia maeoticus*.

Figure 30 – 1140-3 Midlittoral sands (photo: A. Filimon)

1140-4 Midlittoral detritus on shingle and boulders - The habitat is present in the mediolittoral of the rocky shores, on the substrate of boulders, cobblestones or gravel, in continuity with the supralittoral detrital deposits with slow drying, 1140-2. The shore consists of boulders, cobblestones, and gravel, which accumulate mainly dead algae. When the amount of organic compounds is in excess, the habitat degrades; hypoxia and anoxia can occur locally, affecting habitats and biota in the contiguous infralittoral. The fauna is represented by isopods of the genera *Idotea* and *Sphaeroma* and by the crab *Pachygrapsus marmoratus*.

*1170-2 *Mytilus galloprovincialis* biogenic reefs* - Mussel reefs occur on sedimentary substrate: mud, sand, sedge or mixture, most commonly between 35 and 60 m isobaths. Biogenic *Mytilus galloprovincialis* reefs consist of mussel shoals whose shells have accumulated over time, forming a hard support raised above the surrounding sediments, mud, sand, sedge or mixture, on which the mussel colonies live. This type of reef is unique due to the crucial ecological role of mussel banks in self-purifying the ecosystem and achieving benthic-pelagic coupling.

1170-4 Boulders and blocks - The habitat appears in the mediolittoral and infralittoral of the rocky shores, at the foot of the cliffs made of hard rocks. The stone blocks can be rolled and eroded by the movements of the waves. The structural complexity of the spaces between the blocks and the darkness, attract an unusually diverse fauna for such shallow depths. This habitat offers a mosaic of microhabitats, allowing the presence near the shore of some species that usually live in the deeper waters. In the Romanian Black Sea, this habitat is found in the few places with natural rocky shores Agigea, Tuzla, Costinesti, Vama Veche. The breakwater of the port of Constanța and Mangalia can be considered the artificial variant of this type of habitat.

1170-5 Supralittoral rock - This habitat is situated in the splash zone above high water level and is sprayed by waves during storms. The vertical extent depends on wave regime, solar exposure, and slope. Harsh conditions make this habitat suitable only for a few species: *Verrucaria lichen* crusts, the periwinkle *Melaraphe neritoidis*, isopod crustaceans and the crab *Pachygrapsus marmoratus*. In eutrophic, organically polluted areas, the habitat can be covered with a film of epi- and endolytic cyanophyceae.

1170-6 Upper midlittoral rock (Figure no. 31) - The upper midlittoral rock is in the upper part of the splash zone is not permanently covered by water, being intermittently wetted by strong waves. The most characteristic species is the barnacle *Chthamalus stellatus*, rarely at the Romanian seaside.

Figure 31 – 1170-6 Upper midlittoral rock (photo: F. Timofte)

1170-7 Lower midlittoral rock (Figure no. 32) - is located in the lower part of the splash zone and covered by water most of the time. High and constant humidity, strong hydrodynamics and strong light are the dominant environmental factors in this habitat. The flora consists of encrusting coral algae, *Lithophyllum incrustans* and articulated *Corallina officinalis*, ephemeral macrophytic algae such as *Ulva compressa*, *Cladophora* sp., *Ceramium* sp. The characteristic fauna is dominated by the cirriped crustacean *Amphibalanus improvisus*, the actinia *Diadumene lineata*, the bivalves *Mytilus galloprovincialis* and *Mytilaster lineatus*, to which are added bryozoans, amphipod and isopod crustaceans, *Eriphia verrucosa* crabs and *Pachygrapsus marmoratus*. In clean waters the habitat is easily recognizable by the dense belts formed by the calcareous alga *Corallina officinalis* and the bivalve *Mytilaster lineatus*, and in waters with high organic load their place is taken by *Ulva compressa* and *Amphibalanus improvisus*.

Figure 32 – 1170-7 Lower midlittoral rock (photo: F. Timofte)

1170-8 Infralittoral rock with photophilic algae (Figure no. 33) It begins immediately below the lower mediolittoral level, where the emersion are only accidental, and extends to the lower limit of the spread of photophilous algae and marine phanerogams. This lower limit is conditioned by the penetration of light and therefore extremely variable depending on the topography and transparency of the water. In general, on the Romanian coast this limit is around 10-15 m deep, but in areas with high turbidity it can be less than 1 m. The rocky substrate between these limits is covered with rich and varied populations of photophilous algae. They

comprise numerous facies differentiated according to the dominant algal associations, which vary according to the season. Of these, the most valuable for conservation is the coastal belts formed by the perennial brown alga *Cystoseira barbata*. They grow between 0.2-4 m deep, only in areas with clear, clean water and relatively sheltered from waves. *Cystoseira* stems are solid, resistant, elastic, reach 1.5-2 m long and form true dense "forests", whose structural and permanent complexity over time allow the development of a rich and diverse fauna, which includes many rare or endangered species.

Figure 33 – 1170-8 Infralittoral rock with photophilic algae (photo: A. Filimon)

1170-9: Infralittoral rock with *Mytilus galloprovincialis* (Figure no. 34) - *Mytilus galloprovincialis* mussels that cover the rocky bottom are also present in the previous habitat, but become dominant starting from its lower limit, continuing as a compact carpet to the lower limit of the rocky substrate distribution at 30-35 m depth. The fauna is diverse, comprising numerous species of sponges, hydrozoans, polychaete worms, mollusks, crustaceans, ascidians and fish, characteristic only of this habitat, some being rare or protected.

Figure 34 – 1170-9: Infralittoral rock with *Mytilus galloprovincialis* (photo: A. Filimon)

8330 Submerged or partially submerged sea caves (Figure no. 35) - In the Romanian Black Sea, this habitat corresponds to vertical walls, overhangs, caves and tunnels. Light and hydrodynamics are reduced or linear, which generates a stable but selective environment for the groups of organisms that can grow here. The flora is poorly represented, only the sciaphilous algae *Hildebrandtia proprototypus* and *Phyllophora crispa* can grow

under the overhangs and at the entrance of the galleries. The fauna is dominated by sponges, cnidarians, bryozoans, ascidians, mysids crustaceans and decapods and cave fish.

Figure 35 – 8330 Submerged or partially submerged sea caves (after: Zaharia et al., 2008)

Marine species of community interest

Alosa tanaica (Grimm, 1901)

Anadromous marine species (Figure no. 36) has a wide distribution in the Black Sea, populating the Romanian coast (Figure no. 37), Bulgarian, Russian, Ukrainian and Anatolian coasts. In the Danube to the Iron Gates, in the Dnieper to the weirs and mouths of the Dniester. Eurihalin species, wintering in the sea, does not form pure flocks, being mixed with other species, it appears near the sea shore, in spring at temperatures of 6 ° C. Reproduction takes place from late April to early June. Withdrawal of young and adults at sea takes place between August and September.

Figure 36 – *Alosa tanaica* (photo: INCDM)

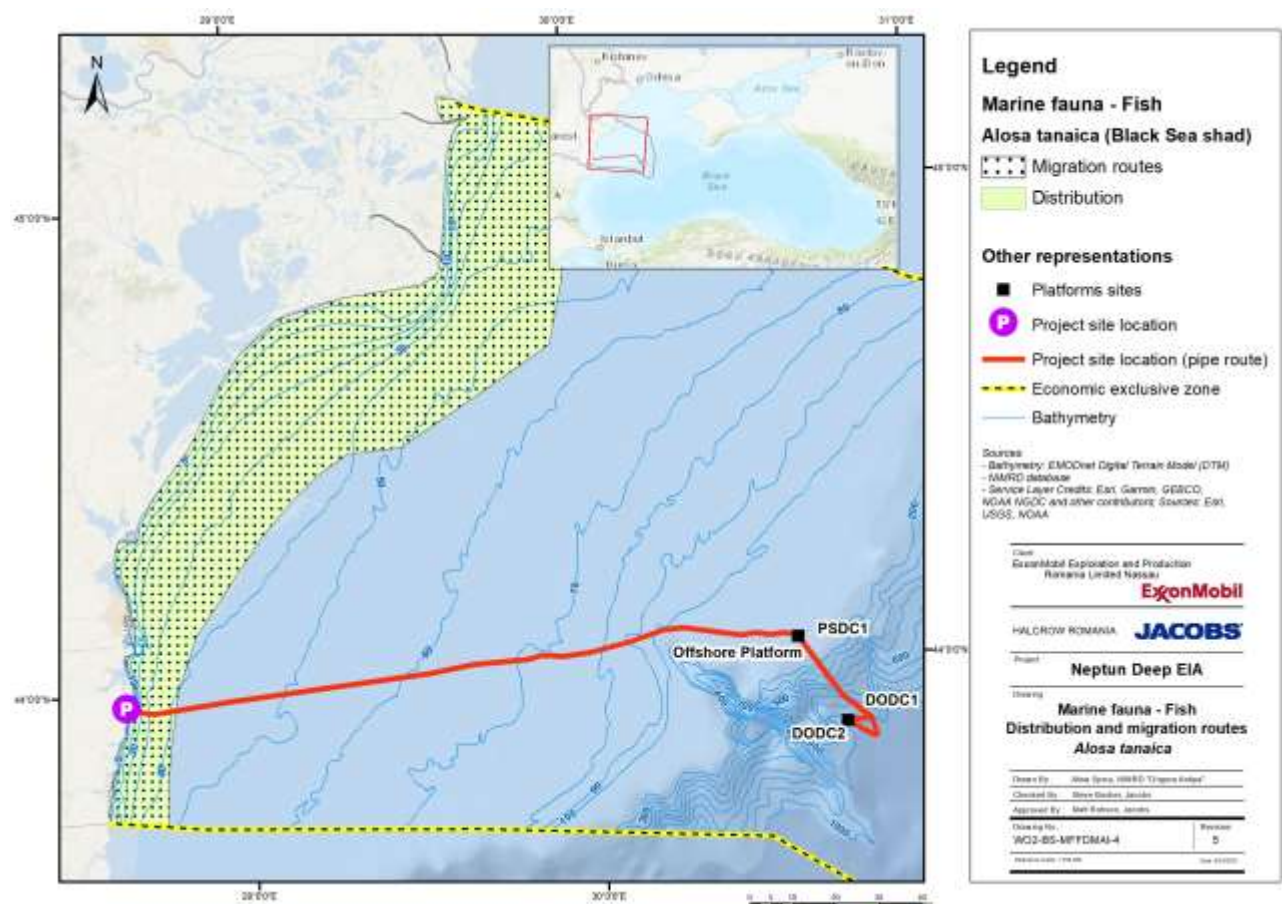

Figure 37 – Distribution of *Alosa tanaica* at romanai littoral

Alosa immaculata (Bennett, 1835)

Cryophilic pelagic species (Figure no. 38). Adults approach the shore only during breeding migration, in February-April, when it is present in all sites (Figure no. 39). The young can often be found in coastal waters.

Figure 38 – *Alosa immaculata* (photo: INCDM)

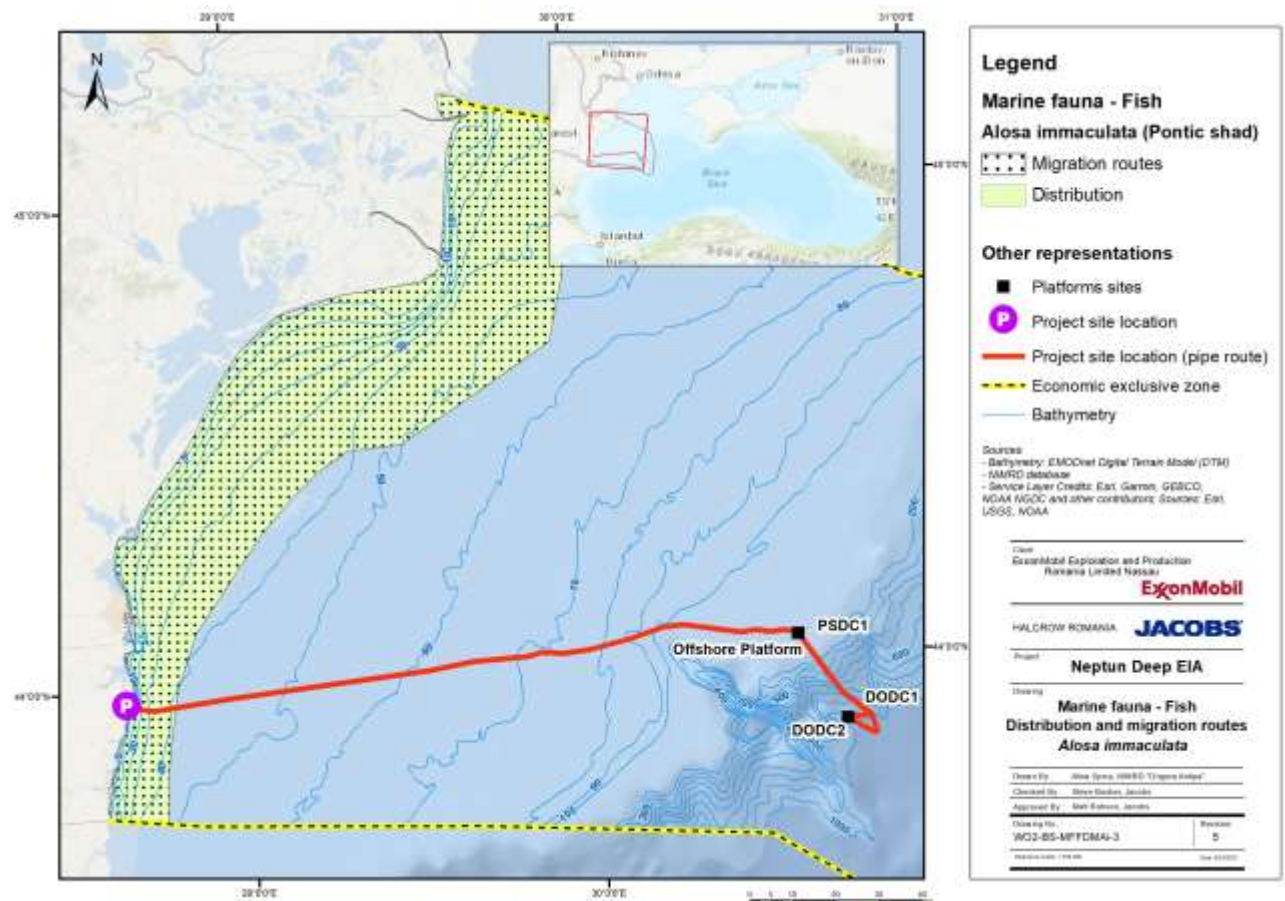

Figure 39 – Distribution of *Alosa immaculata* on the Romanian littoral

Phocoena phocoena relicta (Abel, 1905)

The coastal waters, relatively shallow of the Black Sea, constitute the typical area for the species *Phocoena phocoena* ssp. *relicta* (porpoise) (Figure no. 40). Near the Romanian coast (Figure no. 41), the species can be observed from April to November, most often in front of the mouth of the Danube. It can be seen even in ports in search of food. After lactation, both juveniles and adults feed on small species of benthic fish (gobies), pelagic species (anchovies, groundnuts) and benthic invertebrates.

Figure 40 – *Phocoena phocoena relicta* (beached specimen), (photo: INCDM)

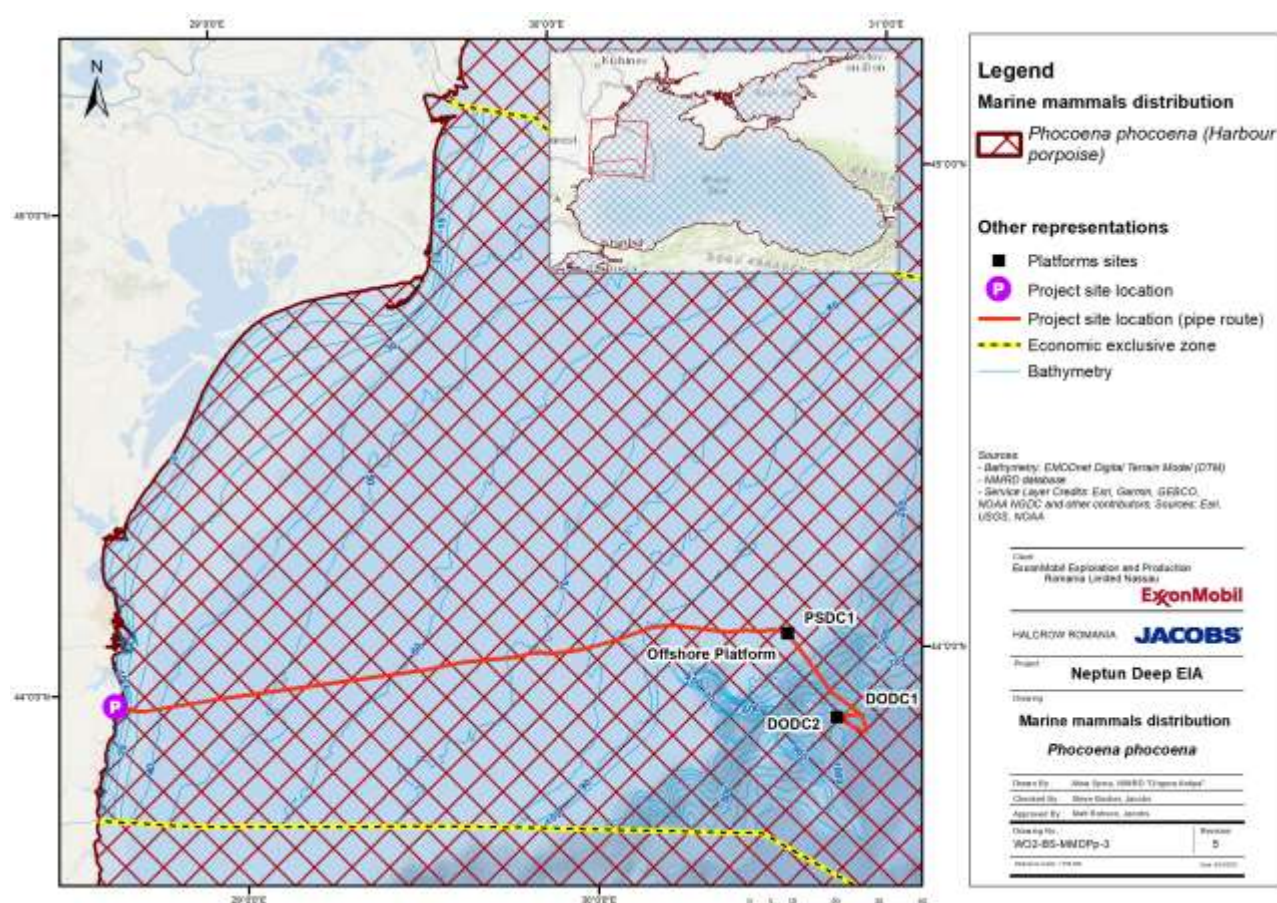

Figure 41 – Distribution of *Phocoena phocoena relicta* on the Romanian littoral

Tursiops truncatus ponticus (Barabasch, 1940)

Tursiops truncatus ssp. *ponticus* (afalin) (Figure no. 42) it is the most frequently observed species, due on the one hand to its coastal habitat, but also to its higher capacity to live in captivity. It is the most robust pontic species, reaching up to 3.3 m in length, with a very long average life (20-30 years) and high fertility. The species is common throughout the Black Sea continental shelf, but can occasionally occur in the open sea and very rarely in the Sea of Azov. On the Romanian coast (Figure no. 43) it can be observed from the end of June to the end of August; in November it leaves Romanian waters, migrating to the shores of Crimea and Anatolia. Afalin can be associated in flocks of 30-500 specimens; adults and juveniles always associate in flocks. In spring, they appear near the shore in search of food, represented by most species of pelagic fish, small or large: anchovy, cod, turbot, mullet, etc.

Species of birds of community interest

The ROSPA0076 Marea Neagră Natura 2000 site is housing a large number of bird species. The location of their favorable habitats in relation to the project site is presented in the assessment table based on the Site-Specific Conservation Objectives established for the Natura 2000 site (Chapter 12.4).

12.4 Assessment of the potential impact of the project on the species and habitats in the natural protected areas of community interest

12.4.1 Identification of potential impacts and forms of impact

The potential impact on natural protected areas of community interest during the execution of the works is represented by:

- Local and temporary increase in turbidity that will generate a decrease in oxygen concentration in the excavation area;
- Local growth of nutrients and possibly pollutants present in sediments that are resuspended during excavation;
- Potential disturbance of habitats during excavation activities in the coastal area due to the sedimentation process of the excavated sediments;
- Potential habitat disturbances and losses during coastal excavation activities due to ship anchors and chains maneuvering;

- Disruption and loss of benthic flora and fauna in the excavated areas;
- Potential disturbance of migratory fish species (Alosa) if coastal activities are undertaken during the migration season (spring);
- Potential disturbance to birds due to the presence of vessels in the marine feeding area;
- Direct disturbance of fish and marine mammals due to noise generated by excavation activities;
- Loss of feeding habitats areas for the bird species from ROSPA0076, due to the land occupation during construction and operation phases (for the entire lifetime of the project);
- Alteration of habitats (feeding habitats for the bird species from ROSPA0076) due to the temporary works, as well as due to air emissions. Habitat alteration is also generated by favoring the dispersal of invasive non-native plant species, both in areas where vegetation has been removed and in non-impacted areas, by anthropocoria due to equipment traffic and human presence on the site;
- Disturbance of bird species activity from ROSPA0076 due to human presence, noise and lighting;
- Increase in bird species mortality, mainly as a result of interventions by digging / excavation or soil compaction, as well as as a result of collision with traffic.

The potential impact on natural protected areas of community interest during the operation period is represented by:

- Disturbance of bird species activity from ROSPA0076, due to noise, lighting and human presence in the area of onshore facilities;
- Increase in bird species mortality as a result of collision with traffic.

12.4.2 Impact prediction

The requirements included in the Circular Letter of the Ministry of Environment, Waters and Forests (MMAF) no. 4654 / 02.07.2020 were considered in order to estimate the potential impact of the project on the habitats and species from the two Natura 2000 sites potentially impacted by the project.

The analysis was performed based on the Site-Specific Conservation Objectives (SCOs) established by ANANP for the two Natura 2000 sites by Decisions no. 490 / 06.10.2021 (ROSCIO273) and no. 535 / 05.11.2020 (ROSPA0076) (attached in Annex A). The results of the analysis are presented in the tabular format requested according to the MMAF Circular.

The analysis was performed for each habitat and species of community interest, at the level of each of the parameters that define the SCOs, taking into account the effects generated by the implementation and operation of the project.

In the screening stage, the purpose of the analysis is to estimate the potential impact generated by the project, without taking into consideration of measures required to avoid and mitigate the impact.

The estimation of the potential impact on SCOs was performed by running of the following steps:

1. Analysis of the objectives, parameters and targets set for each of the habitats and species of community interest included in SCOs;
2. Case-by-case analysis for each habitat and species of the parameters that could be impacted by the proposed project, carried out as follows:

- a) Identification of the likelihood of impacting the component (habitat / species): Is the habitat / habitat of the species intersected? Is it located in the area of manifestation of an effect generated by the project? Can individuals of the species reach the project area? Can the project impact one of the ecological functions of the habitat / species?;
 - b) Identification of the likelihood of impacting the parameter: is there a cause-effect relationship between the project activities and the analyzed parameter (eg physical or chemical interactions)?
3. Justification for the likelihood that each parameter related to SCOs may or may not be impacted by the project;
4. Estimation / quantification (where possible) of the degree of impacting the parameter;
5. Assessment of the significance of the impact, using mainly the classes 'significant / insignificant'. The assessment of significance was generally made on the basis of the following parameters:
 - a) Quantitative - the percentage of impacting from the target value;
 - b) Qualitative:
 - i. If the central or marginal area of the habitat is impacted;
 - ii. Conservation status at the level of the site and at the level of the biogeographical region;
 - iii. Presence in other Natura 2000 sites;
 - iv. Species bordering the distribution range.
 - c) Ecological functions:
 - i. Maintaining / restoring ecological connectivity;
 - ii. Maintaining critical physico-chemical parameters, such as water level.

For the ROSPA0076 Natura 2000 site, no potential significant impacts were identified following the analysis without taking into account measures to avoid and mitigate the impact. At this stage, a significant impact on the 1170-Recifi habitat was assessed for the ROSCI0273 Natura 2000 site, requiring a detailed analysis in the subsequent stages of the EIA procedure.

The assessment tables (Tables no. 41 and 42) also include a first proposal for impact mitigation measures, but these are only preliminary and will be finalized in the later stages of the EIA procedure, after a detailed assessment of the impact on habitats and species from the two Natura 2000 sites.

Table 41 –Estimation of the potential impact on SCO - ROSCI0273 Zona marină de la Capul Tuzla

No.	Natura 2000 component	Natura 2000 Code	Scientific name	Location of the project	Spatial data source	Source of information	State of conservation	Conservation objectives	Parameters	Parameter unit of measurement	Target value	Is it possible to be impacted by the project?	Explanation for the possibility of being impacted	Quantification of impacts (u.m.)	Potential impact (without measures)	Justification of the estimated impact	Measures taken to ensure insignificant residual impacts
1	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Habitat area	Ha	450	Yes	Excavation activities in the coastal area, even if they are not carried out within the perimeter of the ROSCI0273 site, will contribute to the smothering of the habitat.	1-5 ha	Insignificant	The area where the works are to be carried out is an area with intense hydrodynamic activity. It is an area where intense coastal erosion took place, which contributed to bringing sedimentary material of terrigenous origin into the water mass. At each storm, sediment resuspension and turbidity increase in the area for long periods of time. The habitat is periodically impacted by the smothering process.	Carrying out excavation works in the shore area only during periods of great calm. Carrying out an anchoring plan to minimize the use of anchors within ROSCI0273.
2	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Characteristic invertebrate species	Species abundance / square meter	At least 30	Yes	Excavation activities in the coastal area, even if not carried out within the perimeter of the ROSCI0273 site, will contribute to the increase of local turbidity and the decrease of oxygen concentration. These events will be manifested on a small area and strictly during the works. Sedimentation of the suspended material in the water mass and the occurrence of hypoxic episodes can contribute to the mortality of immobile or reduced mobility benthic organisms.	1-5 organisms / m ²	Insignificant	The area where the works are to be carried out is an area with intense hydrodynamic activity. It is an area where intense coastal erosion took place, which contributed to bringing sedimentary material of terrigenous origin into the water mass. At each storm there is a resuspension of sediments and increased turbidity in the area for long periods of time. Organisms in the area are adapted to these conditions and can survive periods of high turbidity. Thus, due to these adaptations, the number of impacted / dead organisms will be very small.	Carrying out excavation works in the shore area only during periods of great calm.
3	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Species indicating disturbances	Present/absent	Absent	No	Green algae are naturally present in the ROSCI0273 site. The resuspension of nutrients in the sediment will be accompanied by increased turbidity, which will limit the penetration of light into the water and thus will not stimulate the development of green algae.	-	-	-	-
4	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Water depth	m	At least 0,5	No	The activities carried out by the project in the vicinity of the ROSCI0273 site will not contribute to the modification of the site bathymetry. Habitat 1110 and its subtypes will remain permanently covered by water.	-	-	-	-

				from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.													
5	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Ecological status of water based on physico-chemical indicators	Ecological status qualifier	At least good ecological status	YES	The activities in the shore area will contribute to the increase of the local turbidity in the area where the excavations will be carried out. The increase in turbidity may have the temporary effect of lowering the oxygen concentration. Also, following the excavations, sediments will be resuspended in water, which will also contribute to the temporary and local increase of nutrients and possibly of some pollutants present in the sediments. There is a risk of accidental contamination with oil or fuel from machinery or ships involved in the construction process.	The activities carried out within the project will not contribute to the deterioration of the chemical state and of the physico-chemical elements that define the ecological state of the water bodies.	Insignificant	The temporary increase of the turbidity and the concentration of the nutrients by the resuspension of the sediments will not contribute to the modification of the physico-chemical indicators that characterize the ecological state of the water body. Thus, the good chemical status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm. Carrying out intervention plans in case of accidental pollution. Presence on board barges and ships of intervention equipment in case of accidental pollution.
6	Habitats	1110	Sandbanks which are slightly covered by sea water all the time	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m from the exit point of the tunnel on the seabed. The tunnel crosses the site at a depth of 10 to 24 m below the seabed.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Ecological status of water based on ecological indicators	Ecological status qualifier	At least good ecological status	YES	In the case of the existence in the area of phytobenthic specimens (macroalgae and angiosperms) or of macrozoobenthic organisms, there is a risk of their mechanical removal following the excavation activities in the coastal area.	The activities carried out within the project will not contribute to the deterioration of the state of the biological elements that define the ecological status of water bodies.	Insignificant	Increased turbidity through the resuspension of sediments and nutrients will lead to a decrease in the degree of light penetration into the water column and a decrease in the buoyancy of phytoplankton. The impact on communities of benthic and planktonic organisms is temporary, reversible and will impact a small area of approx. 1-2 ha. These temporary changes will not contribute to the alteration of the quality of the biological elements that characterize the ecological state of the water body. Thus, the moderate ecological status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm.
7	Habitats	1170	Reef	The habitat is unevenly distributed along the entire Romanian coast and on the entire continental shelf. It is present in the project area, and within the site the habitat is present at a distance of about 60 m	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining a favorable conservation status	Habitat area	ha	At 1285	YES	During the excavation activities in the shore area, barges will be used, which will have anchors on the seabed to maintain the working position. In work areas that are less than 100 m from ROSCI0273, some anchors will be left on the	Approx. 14 ha	Significant	During the excavation work, the barge on which the work equipment is located is kept in the working position with the help of anchors. Some of the anchors will be launched inside the ROSCI0273 site. Anchors reaching the bottom of the water will locally disturb the sediment. The barge will be	Carrying out an anchoring plan to minimize the use of anchors in ROSCI0273. Maintaining the anchor chains in tension while performing barge movement maneuvers to reduce the area impacted by chain drag.

No.	Natura 2000 component	Natura 2000 Code	Scientific name	Location of the project	Spatial data source	Source of information	State of conservation	Conservation objectives	Parameters	Parameter unit of measurement	Target value	Is it possible to be impacted by the project? 29	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Population density	Number of individuals / 100 m ²	Must be defined within 3 years	NO	The activities carried out by the project near the ROSCI 0273 site are not likely to impact the population density of <i>Alosa tanaica</i> . Excavation activities, through the turbidity generated, can create a temporary barrier to the migration of the species. This barrier will not prevent the migration of the species to the breeding areas represented by the rivers in the northwest of the Black Sea.				
30	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Composition by age classes of the population	Presence of juveniles caught in beach fishing with nets (individuals / capture)	At least 3	NO	Project activities cannot influence the presence of juveniles in catches. The presence of juveniles is dependent on the degree of reproduction and catches.				

No.	Natura 2000 component	Natura 2000 Code	Scientific name	Location of the project	Spatial data source	Source of information	State of conservation	Conservation objectives	Parameters	Parameter unit of measurement	Target value	Is it possible to be impacted by the project?	Explanation for the possibility of being impacted	Quantification of impacts (u.m.) 				to a water depth of 40-50 m.													
31	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m..	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Habitat area	ha	Must be defined within 3 years	NO	Project activities will not contribute to habitat degradation.				
32	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Invasive / non-native fish species	Presence / absence Abundance	O absence	NO	The vessels used in the project will not contribute to the introduction of invasive / non-native fish species. In accordance with the IMO Convention on the Management of Ballast Water and Sediment, ships coming from other regions of the globe in the Black Sea exchange periodic ballast water as well as at the entrance to the Black Sea (at a distance of at least 200 miles of the port of destination).				
33	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Ecological status of the water body based on physico-chemical indicators	Ecological status qualifier	At least good ecological status	YES	The activities in the shore area will contribute to the increase of the local turbidity in the area where the excavations will be carried out. The increase in turbidity may have the temporary effect of lowering the oxygen concentration. Also, following the excavations, sediments in the water will be resuspended, which will also contribute to the temporary and local increase of nutrients and possibly of some pollutants present in the sediments. There is a risk of accidental contamination with oil or fuel from machinery or ships involved in the construction process.	The activities carried out within the project will not contribute to the deterioration of the chemical state and of the physico-chemical elements that define the ecological state of the water bodies.	Insignificant	The temporary increase of the turbidity and the concentration of the nutrients by the resuspension of the sediments will not contribute to the modification of the physico-chemical indicators that characterize the ecological state of the water body. Thus, the good chemical status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm. Carrying out intervention plans in case of accidental pollution. Presence on board barges and ships of intervention equipment in case of accidental pollution.

No.	Natura 2000 component	Natura 2000 Code	Scientific name	Location of the project	Spatial data source	Source of information	State of conservation	Conservation objectives	Parameters	Parameter unit of measurement	Target value	Is it possible to be impacted by the project? 34	Fish	4127	<i>Alosa tanaica</i>	The species is present along the entire Romanian coast up to the 40-50 m isobath. It migrates from south to north, towards the mouth of the Danube, in spring. The species is present on the entire surface of the site and on the entire surface of the project up to a water depth of 40-50 m.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Favorable	Maintaining conservation status	Ecological status of the water body based on ecological indicators	Ecological status qualifier	At least good ecological status	YES	In the case of the existence in the area of phytobenthic specimens (macroalgae and angiosperms) or of macrozoobenthic organisms, there is a risk of their mechanical removal following the excavation activities in the coastal area.	The activities carried out within the project will not contribute to the deterioration of the state of the biological elements that define the ecological status of water bodies.	Insignificant	Increased turbidity through the resuspension of sediments and nutrients will lead to a decrease in the degree of light penetration into the water column and a decrease in the buoyancy of phytoplankton. The impact on communities of benthic and planktonic organisms is temporary, reversible and will impact a small area of approx. 1-2 ha. These temporary changes will not contribute to the alteration of the quality of the biological elements that characterize the ecological state of the water body. Thus, the moderate ecological status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm.
35	Marine mammals	1349	<i>Tursiops truncatus</i>	The species is present on the entire Romanian continental shelf. It is present on the entire surface of the site and can be found on the entire surface of the project.	Management plan	Management plan Specific Conservation Objectives (SCOs)	Unfavorable - inadequate	Improving conservation status	Population size	Number of individuals	At least 20	YES	The specimens of <i>Tursiops truncatus ponticus</i> will avoid the area where the works will take place due to the vibrations and noise produced by the tunnel drilling and excavation activities.	The number of specimens of <i>Tursiops truncatus ponticus</i> present in the shore area will be temporarily reduced. Only during the works.	Insignificant	Within the construction activities in the shore area, the main activities generating vibrations and noise are the activities of drilling the tunnel that crosses the cliff and the shallow area and the excavation activities of the ditch for the pipeline, in the area with a depth of 7-20 m. During these activities, specimens of <i>Tursiops truncatus ponticus</i> will be removed from the area where the work is being carried out. The specimens of <i>Tursiops truncatus ponticus</i> will not be impacted by the noise and vibrations produced and will return to the area after the cessation of construction activities.	Imposition of an exclusion zone for marine mammals. The excavation works will start only if in the exclusion zone of 500 m around the works, no dolphins are present after an observation period of 20 minutes.
36	Marine mammals	1349	<i>Tursiops truncatus</i>	The species is present on the entire Romanian continental shelf. Potential impact (no action)	Justification of the estimated impact	Measures taken to ensure insignificant residual impacts
																	activities in the shore area and in the activities of placing the pipes in the offshore area. The temporarily occupied area will not exceed 1 ha.				
6	Birds	A196	<i>Chlidonias hybridus</i>	passage	According to the information from the Management Plan and the distribution maps, as well as the information reported by Romania for the Birds Directive in 2013, the species is reported on the site in the project area.	Species listed in Annex 1 of the Birds Directive	Management plan, Romania's reports based on art. 12 of the Birds Directive	Management plan and SCO	Favorable	Maintenance of the conservation status	Water quality based on physico-chemical indicators (oxygen regime, nutrients, salinity, metals, organic and inorganic micro-pollutants)	Water quality class	Class 5 (bad)	Class 1 (very good)	Class 2 (good)	YES	The activities in the shore area will contribute to the increase of the local turbidity in the area where the excavations will be carried out. The increase in turbidity may have the temporary effect of lowering the oxygen concentration. Also, following the excavations, sediments in the water will be resuspended, which will also contribute to the temporary and local increase of nutrients and possibly of some pollutants present in the sediments. There is a risk of accidental contamination with oil or fuel from machinery or ships involved in the construction process.	The activities carried out within the project will not contribute to the deterioration of the chemical state and of the physico-chemical elements that define the ecological state of the water bodies.	Insignificant	The temporary increase of the turbidity and the concentration of the nutrients by the resuspension of the sediments will not contribute to the modification of the physico-chemical indicators that characterize the ecological state of the water body. Thus, the good chemical status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm. Carrying out intervention plans in case of accidental pollution. Presence on board barges and ships of intervention equipment in case of accidental pollution.

7	Birds	A196	<i>Chlidonias hybridus</i>	passage	According to the information from the Management Plan and the distribution maps, as well as the information reported by Romania for the Birds Directive in 2013, the species is reported on the site in the project area.	Species listed in Annex 1 of the Birds Directive	Management plan, Romania's reports based on art. 12 of the Birds Directive	Management plan and SCO	Favorable	Maintenance of the conservation status	Water quality based on ecological indicators (macroinvertebrates, phytoplankton, phytoplankton, organic and inorganic micro-pollutants)	Water quality class	Class 5 (bad)	Class 1 (very good)	Class 2 (good)	YES	In the case of the existence in the area of phytobenthic specimens (macroalgae and angiosperms) or of macrozoobenthic organisms, there is a risk of their mechanical removal following the excavation activities in the coastal area.	The activities carried out within the project will not contribute to the deterioration of the state of the biological elements that define the ecological state of the water bodies.	Insignificant	Increased turbidity through the resuspension of sediments and nutrients will lead to a decrease in the degree of light penetration into the water column and a decrease in the buoyancy of phytoplankton. The impact on communities of benthic and planktonic organisms is temporary, reversible and will impact a small area of approx. 1-2 ha. These temporary changes will not contribute to the alteration of the quality of the biological elements that characterize the ecological state of the water body. Thus, the moderate ecological status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of calm sea.
8	Birds	A197	<i>Chlidonias niger</i>	passage	According to the information from the Management Plan and the distribution maps, as well as the information reported by Romania for the Birds Directive in 2013, the species is reported on the site in the project area.	Species listed in Annex 1 of the Birds Directive	Management plan, Romania's reports based on art. 12 of the Birds Directive	Management plan and SCO	Favorable	Maintenance of the conservation status	The size of the passage population	Number of individuals	120	140	130	YES	Possibility of accidental casualties during the execution of the works, as a result of the collision with the site traffic.	1 individual in more than 2 years	Insignificant	The species can use the project area in the passage, for rest and feeding. The risk of mortality is very low but may occur accidentally during construction due to a collision with site traffic. The number of accidental victims would be small, insignificant in the number of species in the site. The assessment of the significance of the impact also considers the contribution of other pressures and threats regarding the population size of the species. The type of activities that will take place on the surface of the site (marine area) and the equipment used will not contribute to the occurrence of mortality among bird populations.	During the construction period, on the construction site, the movement of the vehicles involved in the works will be done with low speeds (<20 km / h).

65	Birds	A193	<i>Sterna hirundo</i>	passage	According to the information from the Management Plan and the distribution maps, as well as the information reported by Romania for the Birds Directive in 2013, the species is reported on the site in the project area.	Species listed in Annex 1 of the Birds Directive	Management plan, Romania's reports based on art. 12 of the Birds Directive	Management plan and SCO	unknown	Maintenance of the conservation status	Water quality based on physico-chemical indicators (oxygen regime, nutrients, salinity, metals, organic and inorganic micro-pollutants)	Water quality class	Class 5 (bad)	Class 1 (very good)	Class 2 (good)	YES	The activities in the shore area will contribute to the increase of the local turbidity in the area where the excavations will be carried out. The increase in turbidity may have the temporary effect of lowering the oxygen concentration. Also, following the excavations, sediments in the water will be resuspended, which will also contribute to the temporary and local increase of nutrients and possibly of some pollutants present in the sediments. There is a risk of accidental contamination with oil or fuel from machinery or ships involved in the construction process.	The activities carried out within the project will not contribute to the deterioration of the chemical state and of the physico-chemical elements that define the ecological state of the water bodies.	Insignificant	The temporary increase of the turbidity and the concentration of the nutrients by the resuspension of the sediments will not contribute to the modification of the physico-chemical indicators that characterize the ecological state of the water body. Thus, the good chemical status according to the "Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters" will not change following the implementation of the project.	Carrying out excavation works in the shore area only during periods of great calm. Carrying out intervention plans in case of accidental pollution. Presence on board barges and ships of intervention equipment in case of accidental pollution.
66	Birds	A193	<i>Sterna hirundo</i>	passage	According to the information from the Management Plan and the distribution maps, as well as the information reported by Romania for the Birds Directive in 2013, the species is reported on the site in the project area.	Species listed in Annex 1 of the Birds Directive	Management plan, Romania's reports based on art. 12 of the Birds Directive	Management plan and SCO	unknown	Maintenance of the conservation status	Water quality based on ecological indicators (macroinvertebrates, phytobenthos, phytoplankton, organic and inorganic micro-pollutants)	Water quality class	Class 5 (bad)	Class 1 (very good)	Class 2 (good)	YES	In the case of the existence in the area of phytobenthic specimens (macroalgae and angiosperms) or of macrozoobenthic organisms, there is a risk of their mechanical removal following the excavation activities in the coastal area.	The activities carried out within the project will not contribute to the deterioration of the state of the biological elements that define the ecological state of the water bodies.	Insignificant	Increased turbidity through the resuspension of sediments and nutrients will lead to a decrease in the degree of light penetration into the water column and a decrease in the buoyancy of phytoplankton. The impact on communities of benthic and planktonic organisms is temporary, reversible and will impact a small area of approx. 1-2 ha. These temporary changes will not contribute to the alteration of the quality of the biological elements that characterize the ecological state of the water body. Thus, the moderate ecological	Carrying out excavation works in the shore area only during periods of calm sea.

12.4.3 Cumulative impact

The assessment of the cumulative impact generated by the implementation of the Neptun Deep project on habitats and protected species related to Natura 2000 sites ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla, was conducted considering other projects or activities in the area generating impact, ongoing or proposed and expected to take place at the same time as the Neptune Deep project. Projects that were completed but whose impacts may still be felt in the area of action or which manifested themselves on a larger area that also covered the areas of the two evaluated sites were also considered in this documentation. Existing and proposed projects / activities considered in the cumulative impact assessment include:

- Neptun Deep Project;
- Project "REDUCTION OF COASTAL EROSION, PHASE II (2014-2020)" - Protection and rehabilitation of coastal structures in the area of Eforie Sud and Center;
- Project "REDUCTION OF COASTAL EROSION, PHASE II (2014-2020)" - Protection and rehabilitation of coastal structures in the Costinesti area;
- The project „Consolidation works of the cliffs in the area of Tuzla locality, Constanța county”;
- Midia Natural Gas Development Project;
- Pressures and threats as defined in the Management Plan and Site Data Sheet of ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla:
 - Construction: coastal and maritime, including pipelines, oil infrastructure and wind farms. Coastal protection works;
 - Tourism, recreational navigation and maritime sports, motor boats on site;
 - Pollution;
 - Uncontrolled disposal of garbage by tourists;
 - Exploration and extraction of mineral resources: oil and gas, sand, gravel;
 - Wildlife collection / sampling.

The conclusions of the cumulative impact on the ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla sites related habitats and species, as resulted from the process of assessing the cumulative impact generated by the implementation of the Neptun Deep project, are the following:

- Insignificant cumulative impact for habitat 1110;
- Insignificant cumulative impact for habitat 1140;
- Significant cumulative impact for habitat 1170;
- No cumulative impact for habitat 8330;
- Insignificant cumulative impact for species *Alosa immaculata*;
- Insignificant cumulative impact for species *Alosa tanaica*;
- Insignificant cumulative impact for species *Tursiops truncatus*;

- Insignificant cumulative impact for species *Phocoena phocoena*;
- Insignificant cumulative impact for birds from ROSPA0076 Marea Neagră.

Details of the results of the cumulative evaluation process are presented below in Table no. 43.

Table 43 – Estimation of the cumulative impact on ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla

Natura 2000 site name	Habitat/Species		Pressures and threats generated by the proposed project and other projects					Pressures and threats according to the Management Plan and the Site Sheet of the ROSPA0076 Marea Neagră and ROSCI0273 Zona marină de la Capul Tuzla Sites						Cumulative impact
			Neptun Deep Project	"REDUCTION OF COASTAL EROSION, PHASE II (2014-2020)" - Protection and rehabilitation of coastal structures in the area of Eforie Sud and Center	"REDUCTION OF COASTAL EROSION, PHASE II (2014-2020)" - Protection and rehabilitation of coastal structures in the Costinesti area	Cliff consolidation works in the area of Tuzla locality, Constanta county	Midia Natural Gas Development Project	Construction: coastal and maritime, including pipelines, oil infrastructure and wind farms. Coastal protection works	Tourism, recreational navigation and maritime sports, motor boats on site	Pollution	Uncontrolled disposal of garbage by tourists	Exploration and extraction of mineral resources: oil and gas, sand, gravel	Wildlife collection / sampling	
ROSCI 0273 Zona marină Capul Tuzla	Habitats	1110	Indirect temporary disturbance of habitat 1110 at the ROSCI0273 site due to turbidity generated by excavation works.	Temporary loss of habitat 1110 (approximately 110 ha) in the area of the site ROSCI0197 Plaja submersă Eforie Nord - Eforie Sud. According to the project assessment, the SCI0273 Zona marină de la Capul Tuzla will not be affected / impacted. Ongoing project.	Habitat loss (approximately 30 ha) in the area of the site ROSCI 0283 Costinești-23 August. According to the project assessment, the SCI0273 Zona marină de la Capul Tuzla will not be affected / impacted.	Temporary disturbance of habitat 1110. Restoration interval 1 year. The project is partially completed in 2009. The works in the SCI0273 Zona marină de la Capul Tuzla are completed. The habitat affected by this project has been restored.	Temporary disturbance of habitat 1110 due to the process of installing the gas pipeline. Recovery interval 1 year. The pipeline installation works have been completed. The habitat is being rebuilt.	Temporary disturbance or loss of habitat.	No impact.	Insignificant impact.	Insignificant impact.	Insignificant impact. Disturbance / temporary habitat loss. It is not allowed to extract mineral resources (sand) from the site.	Insignificant impact.	Insignificant cumulative impact for habitat 1110 from ROSCI0273 Zona marină de la Capul Tuzla.
		1140	The habitat will not be affected by the project works.	Habitat loss (approximately 2 ha) in the area of the site ROSCI0197 Plaja submersă Eforie Nord - Eforie Sud. According to the project assessment, the SCI0273 Zona marină de la Capul Tuzla will not be affected / impacted. Ongoing project.	Temporary habitat loss (approximately 2 ha) in the area of the ROSCI 0283 Costinești-23 August. According to the project assessment, the SCI0273 Zona marină de la Capul Tuzla site will not be affected / impacted.	The habitat was completely lost in the SCI0273 Zona marină de la Capul Tuzla Site during the works. At this time the habitat has partially recovered. There is no information about the restored surface of this habitat in the SCI0273 Zona marină de la Capul Tuzla. site	The habitat was not affected by the project works.	Temporary disturbance or loss of habitat.	No impact.	Insignificant impact.	Insignificant impact.	Insignificant impact. Disturbance / temporary habitat loss. It is not allowed to extract mineral resources (sand) from the site.	Insignificant impact.	Insignificant cumulative impact for habitat 1140 from ROSCI0273 Zona marină de la Capul Tuzla.
		1170	Approximately 14 ha will be disturbed by the anchors and chains of the ships involved in the excavation process. Habitat will not be lost and fragmented. The impact is temporary and reversible in about 1-2 years.	Habitat loss (approximately 20 ha) in the area of the site ROSCI0197 Plaja submersă Eforie Nord - Eforie Sud. According to the project evaluation, the SCI0273 Zona marină de la Capul Tuzla will not be affected / impacted. Ongoing project.	Habitat loss (approximately 1 hectare) in the area of the ROSCI 0283 Costinești-23 August. According to the project assessment, the SCI0273 Zona marină de la Capul Tuzla will not be affected / impacted.	Temporary habitat disturbance 1170. Restoration interval 1 year. The project is partially completed in 2009. The works in the SCI0273 Zona marină de la Capul Tuzla are completed. The habitat affected by this project has been restored.	Temporary disturbance of habitat 1170 due to the process of installing the gas pipeline. Recovery interval 1-2 years. The pipeline installation works have been completed. The habitat is in the process of restoration.	Temporary disturbance or loss of habitat.	Insignificant impact.	Insignificant impact.	Insignificant impact.	Insignificant impact. Disturbance / temporary habitat loss. It is not allowed to extract mineral resources (sand) from the site.	Insignificant impact.	Significant cumulative impact for habitat 1170 from ROSCI0273 Zona marină de la Capul Tuzla.
		8330	The habitat will not be affected by the project works.	Not present in the project area	The habitat will not be affected by the project works.	The habitat was not affected by the project works.	Not present in the project area.	No impact	No impact.	Insignificant impact.	Insignificant impact.	Insignificant impact.	Insignificant impact.	No cumulative impact for habitat 8330 from ROSCI0273 Zona marină de la Capul Tuzla.

Insignificant impact	Insignificant cumulative impact for bird species.

13. Aspects regarding the impact of the project on water bodies

13.1 Water Framework Directive

The WFD aims to protect and optimize the quality of aquatic ecosystems and their sustainable use. It establishes a framework to enhance protection and improve the aquatic environment of inland, transitional, and coastal waters. The general objectives of the WFD are to achieve "good status" of all waters by 2015 and prevent any further deterioration of status. The concept of water status includes both "ecological status" and "chemical status".

In order to achieve the environmental objectives, the WFD provides for the development of a program of measures. The classification system provided for in the WFD on water quality includes five categories of conditions: very good, good, moderate, poor, and bad. "Very good condition" defines those conditions associated with the absence of human pressure or very weak anthropogenic pressure. This is also called the "reference condition", as it represents the best state that can be obtained and is the reference element. These reference conditions are specific depending on the type of water, so they differ from one type of water to another. The quality assessment is based on the degree of deviation from these reference conditions, in accordance with the definitions in the Directive: "Good condition" reflects a "slight" deviation, "moderate condition" reflects a moderate level of deviation and so on.

The assessment of status is based on qualitative biological, chemical and hydromorphological elements. In the case of transitional and coastal waters, the biological elements to be considered include phytoplankton, aquatic flora, benthic invertebrate fauna and ichthyofauna. Hydromorphological qualitative elements have characteristics such as exposure to waves, the structure of the area delimited by the tide or the variation of depth. The chemicals to be included in the assessment are transparency, salinity, oxygenation conditions, nutrients and specific pollutants.

13.2 Project location

13.2.1 Onshore

Hydrographic basin

The project site is located in the Dobrogea – Litoral hydrographic basin.

Water course: name and cadastral code

The onshore project location does not intersect any surface water courses (rivers or streams). The closest water courses and the distances between them and the onshore project site are presented in Table 44 and their location is shown in Figure 44.

Table 44 - Description of nearby water courses

Name of the Water Course	Cadastral Code	Distance from the project site
Dereaua	XV_1.11	7.7 km
Biruința	XV_1.11a	7.86 km
Tătlăgeacul Mare	XV_1.11b	5.27 km
Tătlăgeacul Mic	XV_1.11c	9.22 km
Albești	XV_1.12	21.39 km

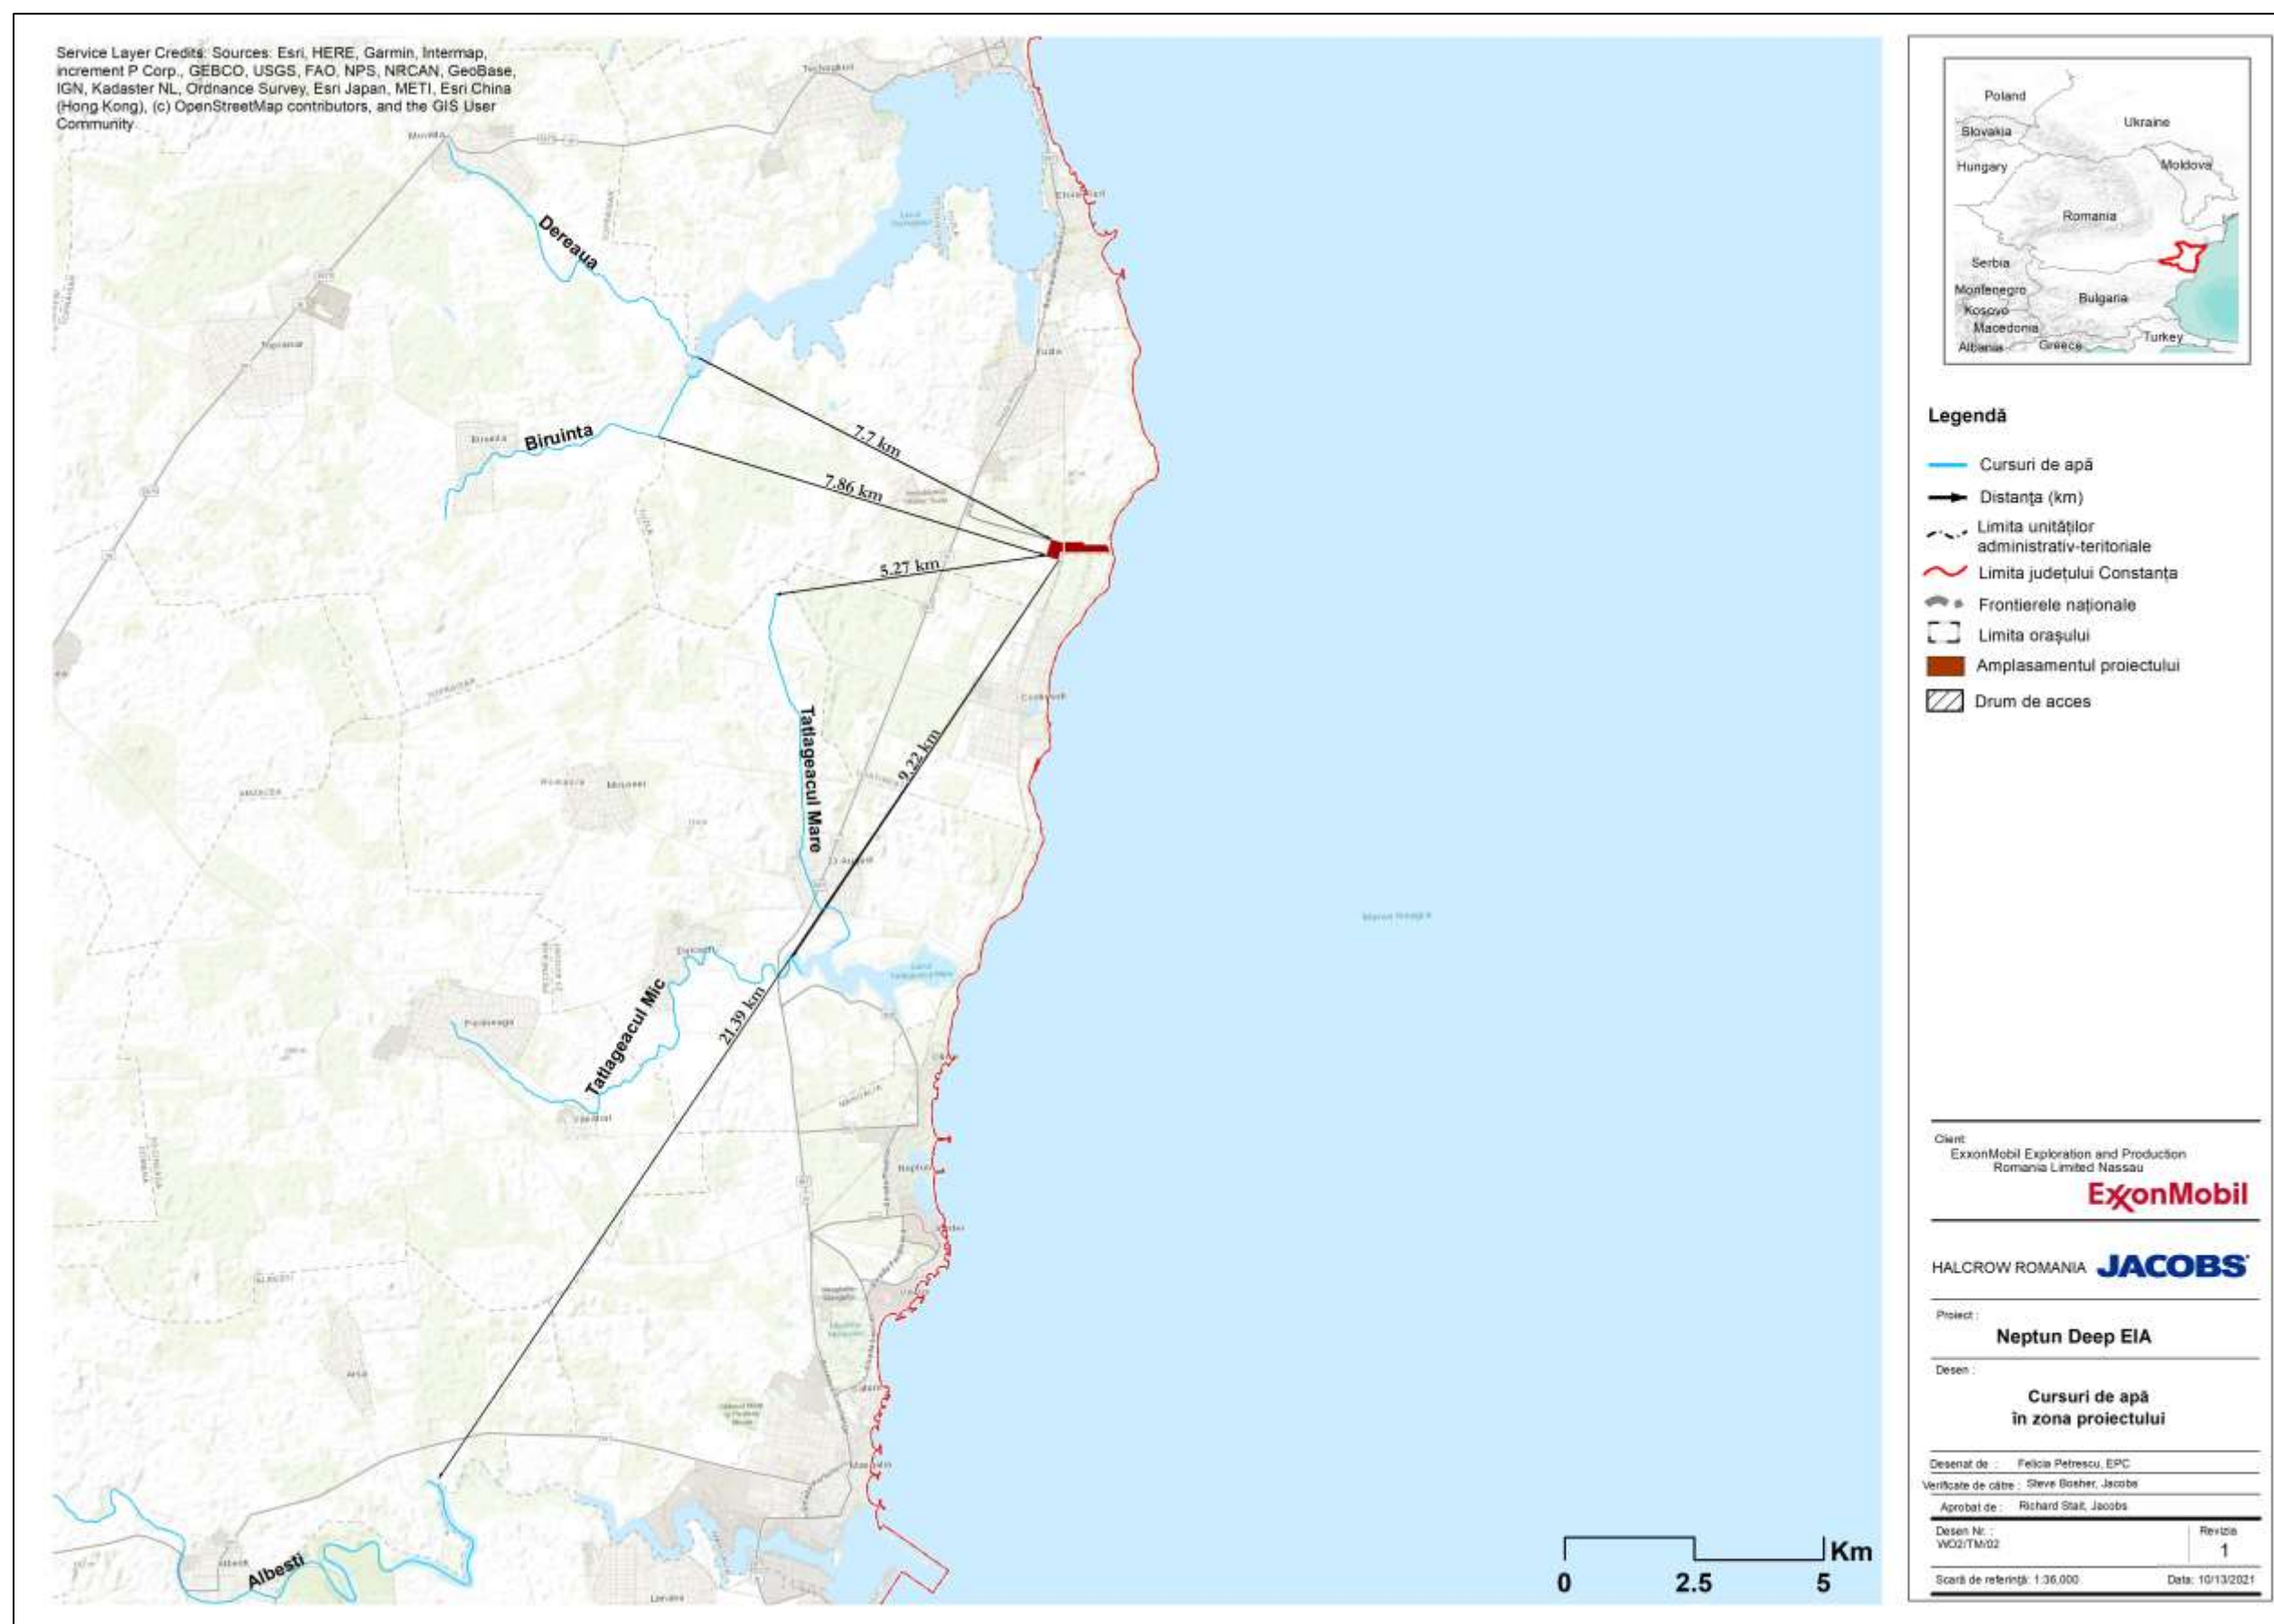

Figure 44 - Location of the nearby water courses in relation with the onshore project site

Water body (surface and /or groundwater): name and code

The onshore project site does not intersect any surface water bodies, but 4 onshore water bodies are located within 20 km from the project site. In Figure 45 is shown the location of the water bodies in relation with the onshore project site, together with the distances between the project site and the water bodies. The figure also includes the coastal water bodies, described in the following section. In Table 45 below are presented the name, code, and type of the nearby water bodies.

Table 45 – Characteristics of nearby onshore surface water bodies

Hydrographic Basin	Water Body	Water Body code	Type of the Water Body
Dobrogea - Litoral	Lacul Techirghiol Sărat	ROLW15.1_B2	HMWB-LW
	Lacul Techirghiol Dulce	ROLW15.1_B1	LW
	Lacul Tătlăgeac	ROLW15.1_B9	LW
	Mangalia	ROCT01_B2	HMWB-CW

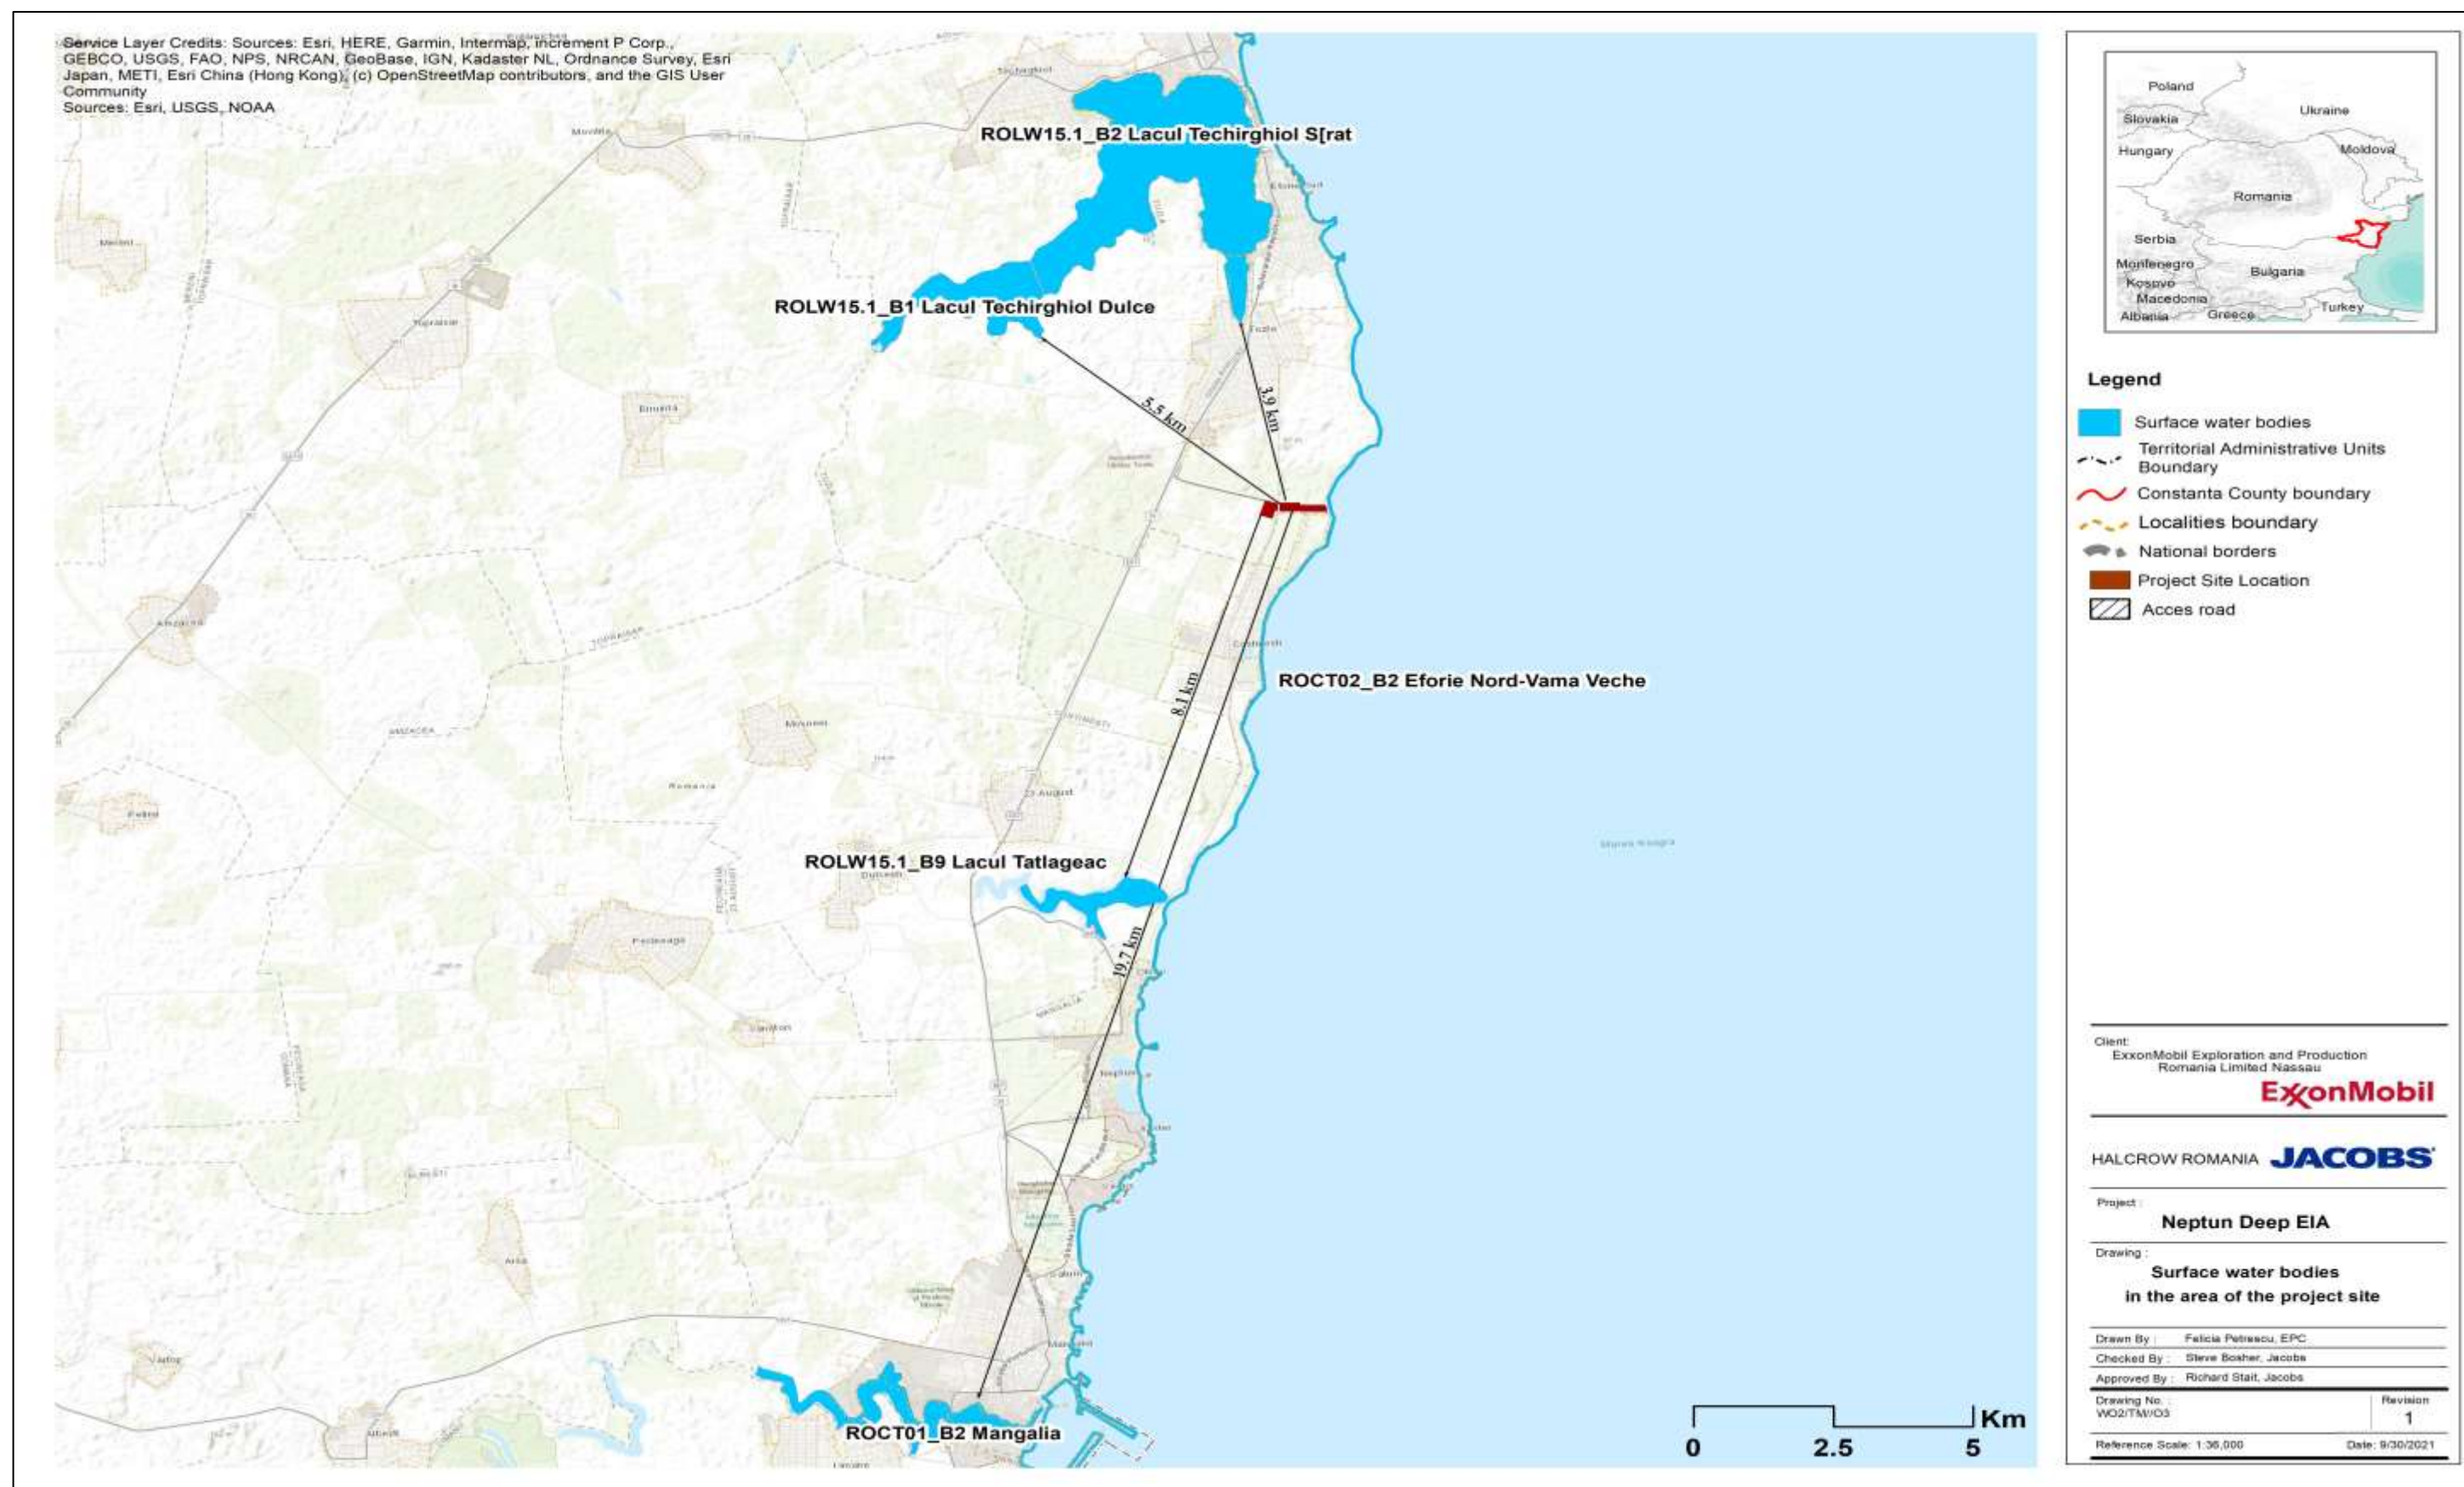

Figure 45 – Location of the nearby water bodies in relation with the project site

The onshore project site location intersects 3 groundwater bodies: RODL04 Cobadin - Mangalia, RODL06 Platforma Valahă and RODL10 Dobrogea de Sud (Figure 46). Out of these, RODL10 is phreatic aquifer, while RODL04 and RODL06 are deep groundwater bodies.

The **groundwater body RODL10 Dobrogea de Sud** is a phreatic aquifer of porous-permeable or fissure type formed in the Holocene-Pleistocene period. The thickness of the cover layers varies between 0-0.5 m. The largest proportion of the surface of the water body is covered by agricultural areas. As sources of pollution, which may have a negative impact on the quality status of the groundwater aquifer, diffuse pollution caused by agricultural activities has been identified. The only determined impact is the one coming from the industry (processing and metallurgy) from the localities of Limanu, Medgidia, Cernavodă, Cobadin, Ovidiu and Techirghiol.

The **groundwater body RODL04 Cobadin – Mangalia** is a fissure-karstic groundwater body, developed in hard rocks, predominantly calcareous. The thickness of the cover layers varies between 0 - 20 m. It is observed that the majority of the surface of this body is occupied by arable land. As sources of pollution, which may have a negative impact on the quality status of the groundwater aquifer, diffuse pollution caused by agricultural activities has been identified. This body is cross-border.

The **groundwater body RODL06 Platforma Valahă** is an under-pressure groundwater body, being confined to Jurassic - Barremian deposits and has a significant economic importance. The thickness of the layers is variable, being very close to the surface. As sources of pollution, which may have a negative impact on the quality status of the groundwater aquifer, diffuse pollution caused by agricultural activities has been identified. This body is cross-border.

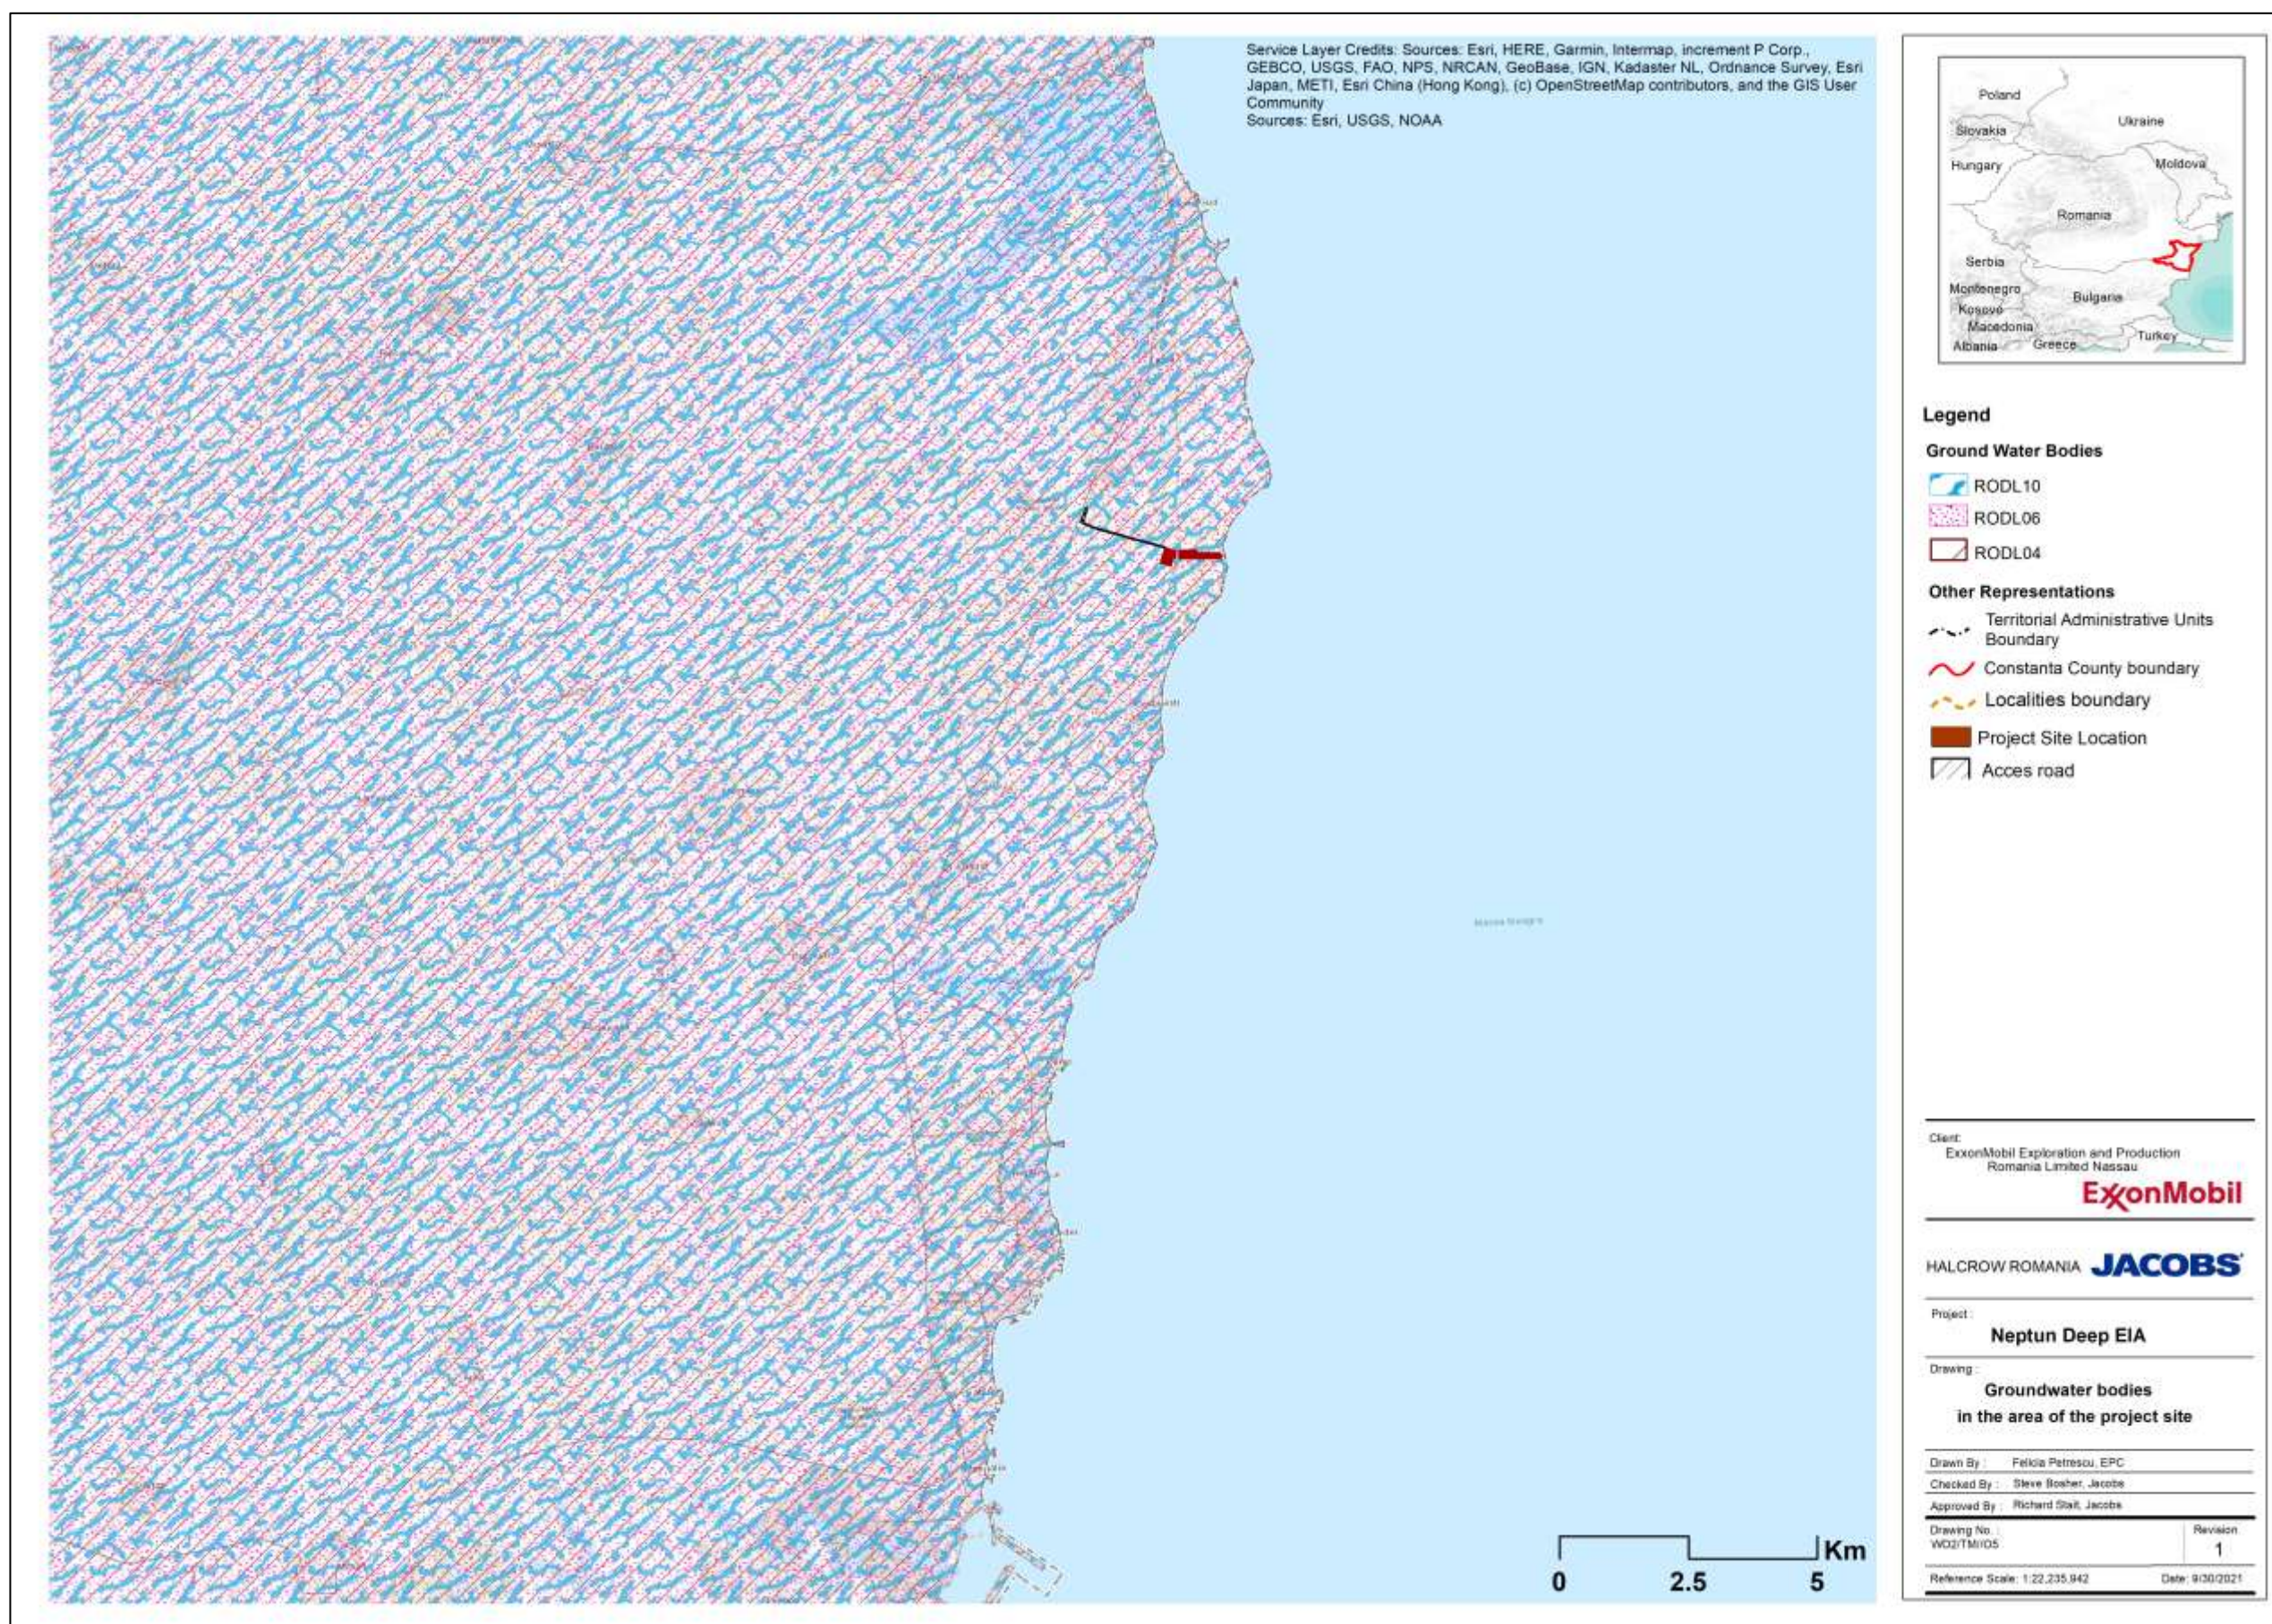

Figure 46 – Location of the onshore project site in relation to the groundwater bodies

13.2.2 Coastal and Offshore

The coastal component of Neptun Deep Project, mainly the exit point of the gas pipeline, is located within the coastal water body Eforie Nord -Vama Veche (Table 46 and Figure 47).

Table 46 – Characteristics of the coastal surface water body

Hydrographic basin	Name of the coastal water body	Water body code	Type of the Water Body
Coastal waters	Eforie Nord - Vama Veche	ROCT02_B2	CW – coastal waters

The water body Eforie Nord – Vama Veche (ROCT02_B2), which may be influenced by the Project, has a surface of 126.22 km².

In the coastal area there is also a shellfish designated area, represented in Figure 48.

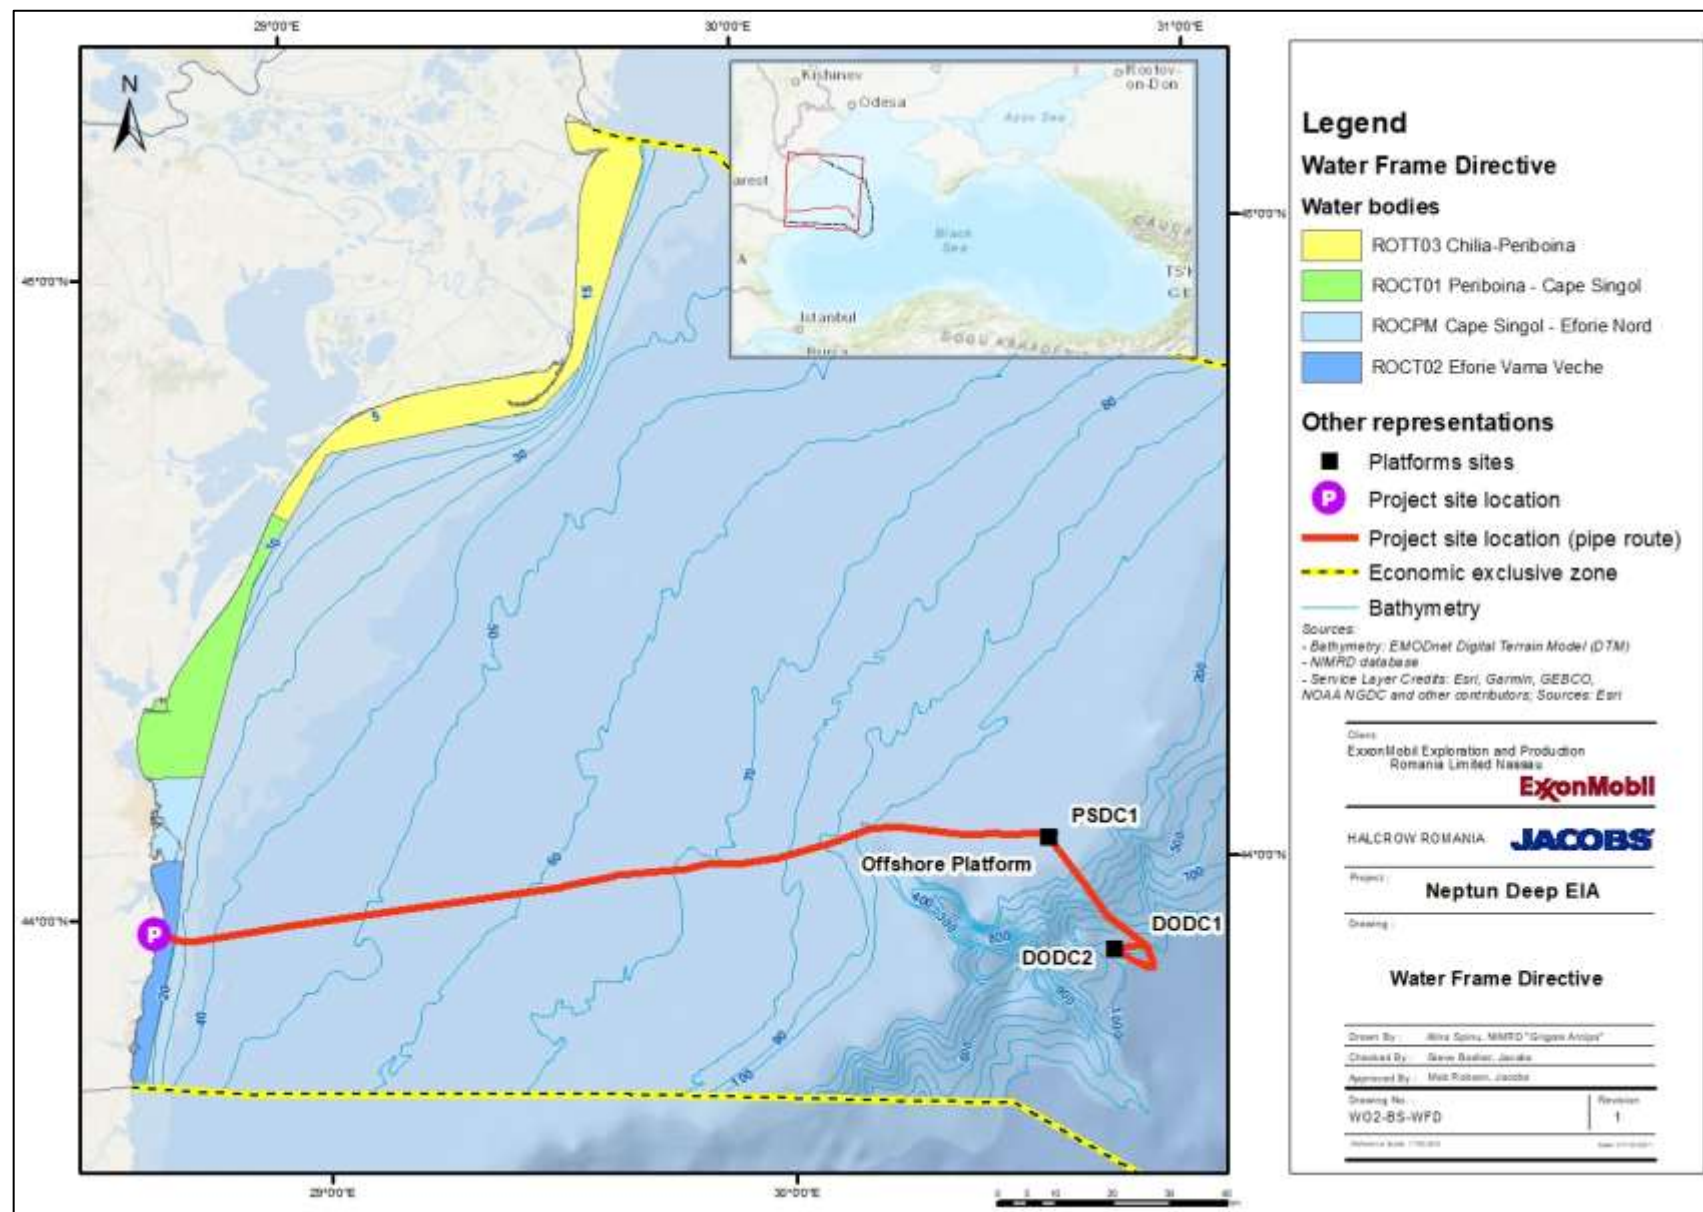

Figure 47 - Location of the project site in relation to the coastal water bodies

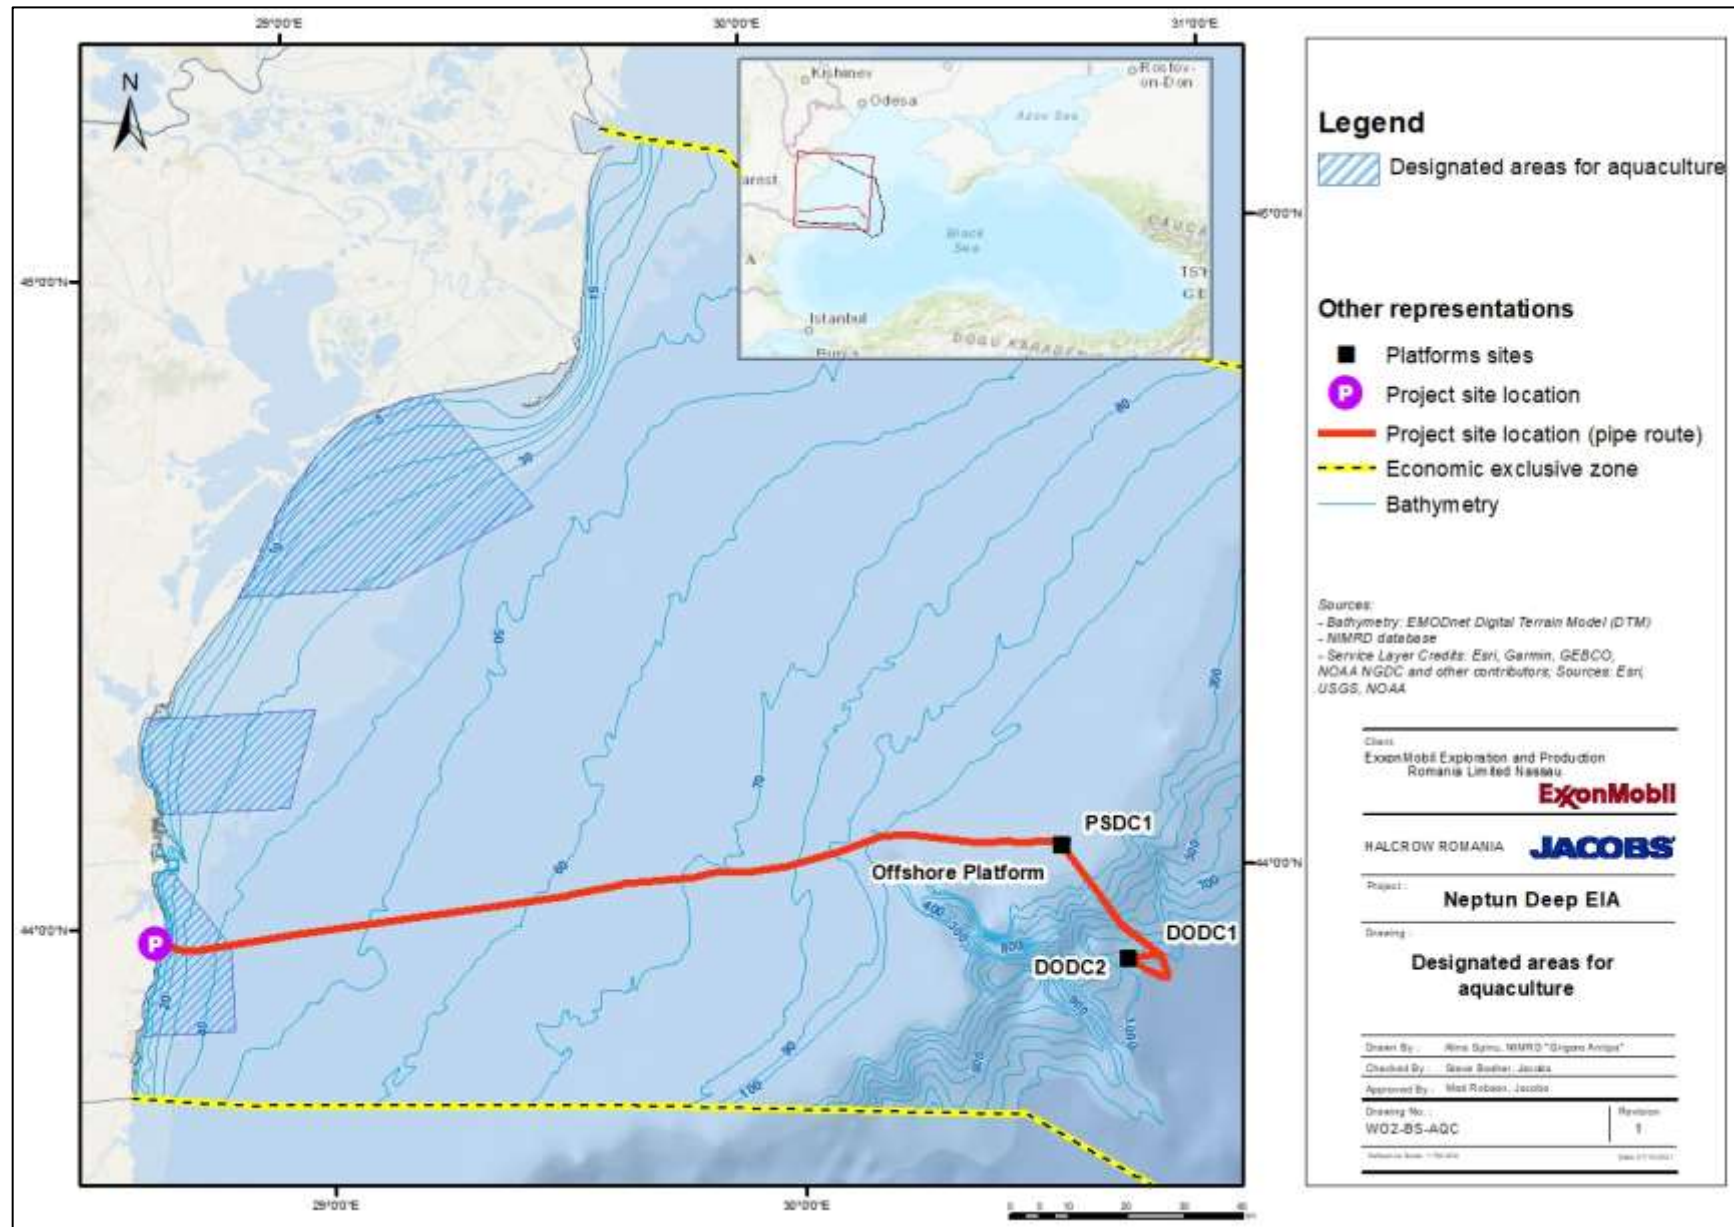

Figure 48 - Location of the shellfish designated area in relation with the project site

13.3 Ecological status/ecological potential and chemical status of the surface water body

13.3.1 Onshore Water Bodies

In Table 47 below are presented the ecological status/ecological potential and chemical status of the onshore surface water bodies, according to the *Updated management plan of the Danube river, Danube Delta, Dobrogea hydrographic area and coastal waters from 2016-2021*.

Table 47 - Status of the nearby surface water bodies

Hydrographic Basin	Water Body	Water Body code	Type of the Water Body	Ecological Status / Potential	Chemical Status
Dobrogea - Litoral	Lacul Techirghiol Sărat	ROLW15.1_B2	HMWB-LW	Not evaluated	Good
	Lacul Techirghiol Dulce	ROLW15.1_B1	LW	Good	Good
	Lacul Tatlageac	ROLW15.1_B9	LW	Good	Good
	Mangalia	ROCT01_B2	HMWB-CW	Moderate	Good

13.3.2 Coastal Water Bodies

13.3.2.1 The state of the water body according to Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters

According to the Updated Management Plan of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters, the ROCT02_B2 water body was classified as a natural water body with moderate ecological status and good chemical status (Table 48, Figures 49 and 50).

Table 48 – State of the coastal water body

Name of the water body	Water body category	Water body typology	Water body code	Ecological Status	Chemical Status
Eforie Nord - Vama Veche	CW	ROCT02	ROCT02_B2	Moderate	Good

Coastal water monitoring is done in shore monitoring sections / stations, as well as offshore sections at depth of 5 m, 10 m, 20 m, and sections at 12 nautical miles (22 km).

According to the Management plan, to assess the condition of water bodies was mainly used the monitoring data from 2013; also, for certain situations the data for the period 2009-2013 was used, as well as recent monitoring data. In the case of biological elements that are monitored less frequently, the latest monitoring data was used.

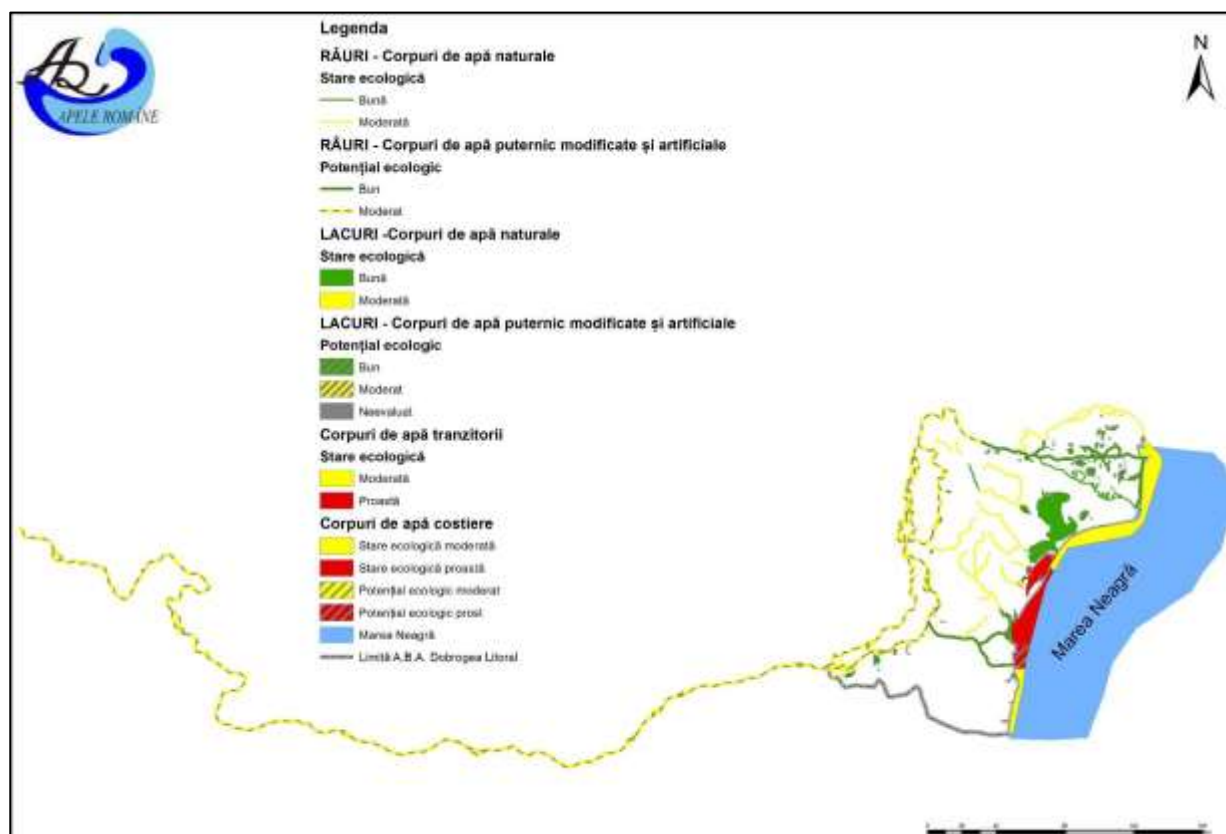

Figure 49 - Ecological status and ecological potential of surface water bodies at the level of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal waters

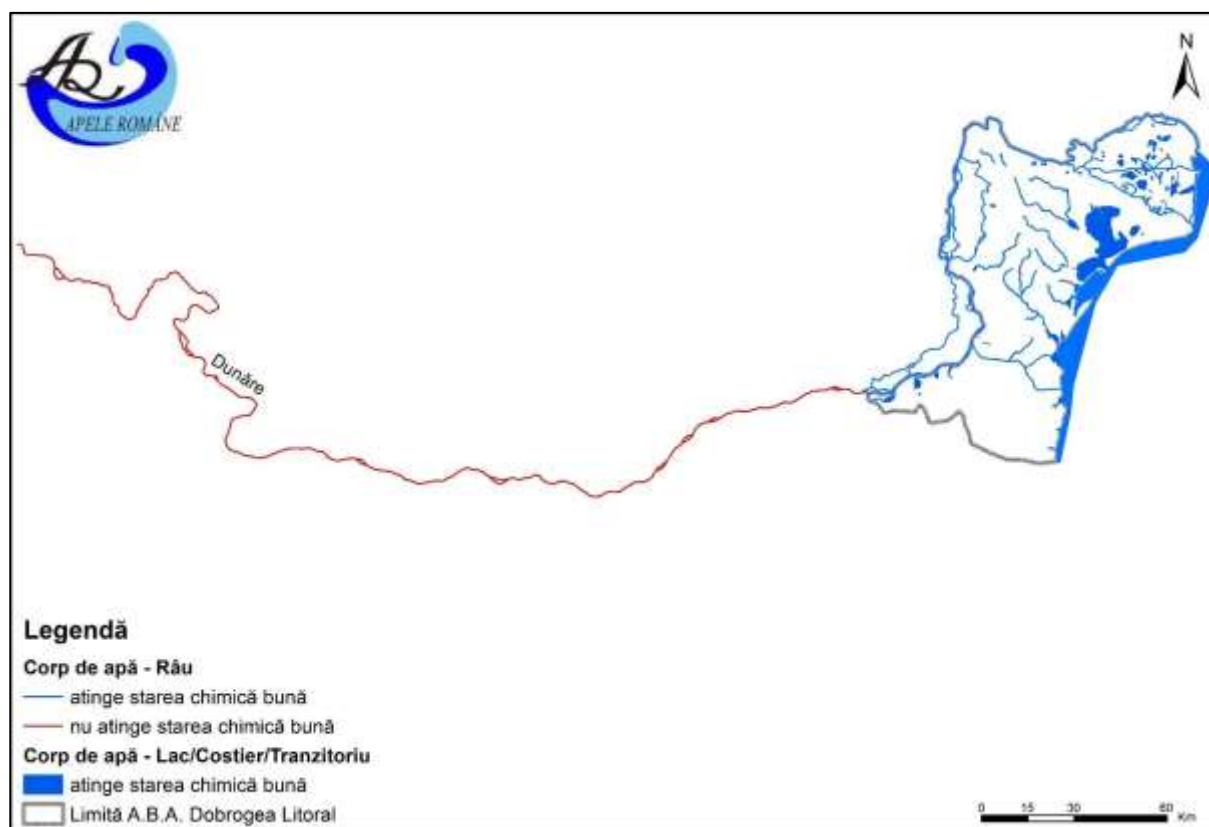

Figure 50 - Map regarding the situation of the chemical state of surface water bodies at the level of the Danube River, Danube Delta, Dobrogea Hydrographic Area and Coastal Waters

13.3.2.2 The state of the water body according to other documents

Other information was also gathered and presented, in addition to data selected from the Updated Management Plan, which would describe the state of the Eforie Nord-Vama Veche water body, which may be influenced by the Project. The source of information is represented by the *"Study on updating / developing the methodology for assessing the ecological status / ecological potential for transient and coastal water bodies"*, prepared by NIMRD "Grigore Antipa" prepared in 2017, Chapter IV. *"Application of methodologies for assessing ecological status / ecological potential and interpretation of results"*, Beneficiary: Ministry of Waters and Forests.

For the evaluation of water bodies data was obtained from stations located on a monitoring network (Figure 51) located on the transects Eforie, Costinești, Mangalia and Vama Veche, at water depth of 5 m and 20 m, during 2015 - 2016. If these data were insufficient or missing, was used data obtained from national and international research projects, for which expeditions were carried out in the study area.

The global assessment and classification of the ecological status was done by integrating biological and support elements, based on the integration methodology for global assessment and classification of ecological status / ecological potential of transitional and coastal water bodies, which correlates and integrates biological elements, hydro morphological elements and physico-chemical elements defined by specific parameters, in accordance with the provisions of the WFD.

By integrating the biological elements and the supporting ones, for the period 2015 - 2016, a POOR ecological status was obtained for the water body Eforie Nord - Vama Veche (Table 49).

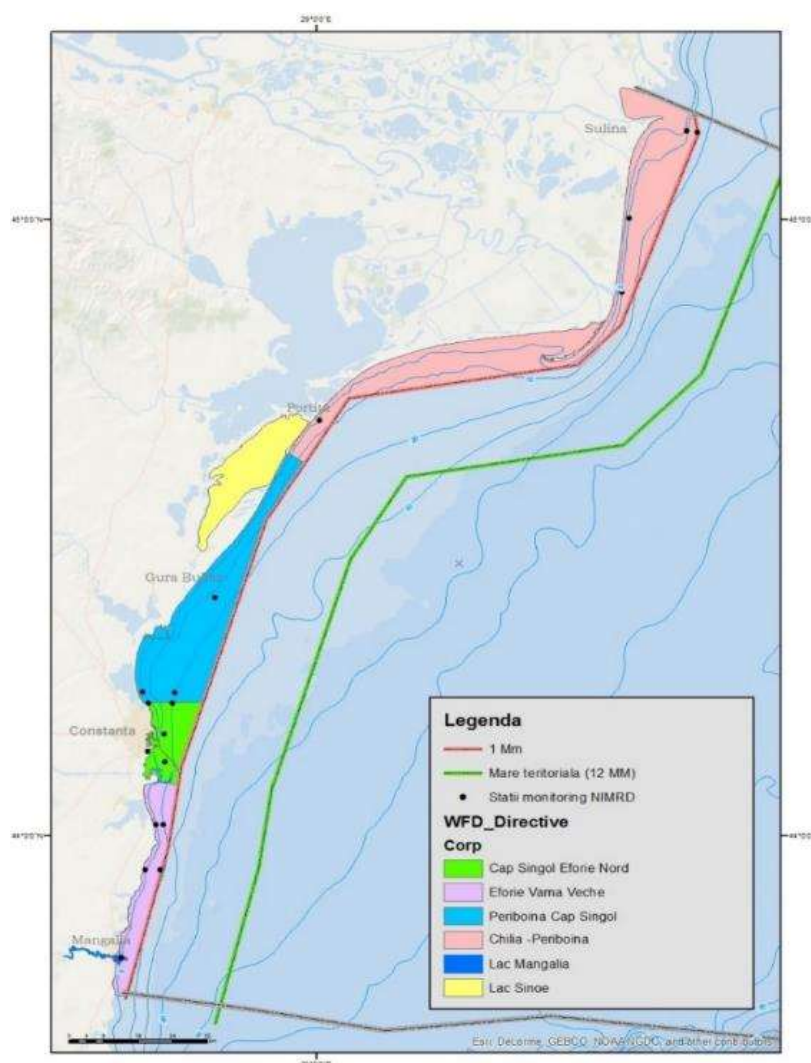

Figure 51 - Transitional and coastal water bodies, natural and modified from the Romanian Black Sea coast

Table 49 - Assessment and global classification of the ecological status of natural water bodies by integrating biological and supporting elements, for the period 2015 - 2016

Water body	Biological elements					Support elements								Ecological state of the water body
						Hydromorphological elements				General physico-chemical elements and specific pollutants				
	Phytoplankton	Macroalgae	Macrozoobenthos	Fish	State	Hydrological parameters	Sedimentological parameters	Morphological parameters	State	General physico-chemical elements	Heavy metals	Organic pollutants	State	
Eforie Nord - Vama Veche	Poor	Moderate	Good	-	Poor	Very good	Very good	Very good	Very good	Moderate	Bad	Bad	Bad	Poor

13.4 Quantitative and chemical status of the groundwater body

In Table 50 are presented the qualitative (chemical) and quantitative status of the groundwater bodies from the project area, according to the *Updated management plan of the Danube river, Danube Delta, Dobrogea hydrographic area and coastal waters from 2016-2021*.

Table 50 - Characteristics of groundwater bodies in the project area

Hydrographic Basin	Groundwater Body				
	Code	Name	Type	Qualitative (chemical) status	Quantitative status
Dobrogea - Litoral	RODL04	Cobadin - Mangalia	depth	Good	Good
	RODL06	Platforma Valahă	depth	Good	Good
	RODL10	Dobrogea de Sud	phreatic	Good	Good

13.5 Environmental objectives of the identified water bodies

13.5.1 Onshore Water Bodies

According to the *"Updated management plan of the Danube river, Danube Delta, Dobrogea hydrographic area and coastal waters from 2016-2021"*, in Tables 51 and 52 below are presented the environmental objectives for the surface water bodies, both onshore and coastal, and respectively for the groundwater bodies.

Table 51 - Environmental objectives of the nearby surface water bodies

Hydrographic Basin	Water Body	Water Body code	Environmental objective		Ecological status / ecological potential	Chemical status	Achieving the environmental goal - ecological status / ecological potential	Achieving the environmental goal - chemical status	Achieving the environmental goal - ecological status / ecological potential	Achieving the environmental goal - chemical status	The deadline for achieving the environmental objective	
			Ecological status	Chemical status	PM II		2015		2021		Ecological status / ecological potential	Chemical status
Dobrogea - Litoral	Lacul Techirghiol Sărat	ROLW15.1_B2	environmental objective that will be defined at a later stage	good chemical status	N	2 **	NO	YES	YES	YES	2021	2013
	Lacul Techirghiol Dulce	ROLW15.1_B1	good ecological status	good chemical status	2 *	2	YES	YES	YES	YES	2015	2013
	Eforie Nord – Vama Veche	ROCT02_B2	good ecological status	good chemical status	3	2	NO	YES	YES	YES	2021	2013
	Lacul Tatlageac	ROLW15.1_B9	good ecological status	good chemical status	2	2	YES	YES	YES	YES	2015	2013
	Mangalia	ROCT01_B2	good ecological status	good chemical status	3	2	NO	YES	YES	YES	2027	2013

Note:

- * 2 - good ecological status / good ecological potential;
 3 - moderate ecological status / moderate ecological potential;
 N - not applicable
 ** 2 - bad chemical condition.

Table 52 - Environmental objectives of the intersected groundwater bodies

Hydrographic Basin	Name of groundwater body	Groundwater body code	Environmental objective		Current quantitative status	Current chemical status	The deadline for achieving the environmental objective	
			Ecological status	Chemical status	(Good/Bad)	(Good/Bad)	Quantitative status	Chemical status
Dobrogea - Litoral	Cobadin-Mangalia	RODL04	Good	Good	Good	Good	2015	2015
	Platforma Valahă	RODL06	Good	Good	Good	Good	2015	2015
	Dobrogea de Sud	RODL10	Good	Good	Good	Bad	2015	2027

13.5.2 Coastal and Offshore Water Bodies

For the project area, the environmental objectives, the exceptions applied and the related deadlines for achieving the environmental objectives of the "Updated management plan of the Danube river, Danube Delta, Dobrogea hydrographic area and coastal waters from 2016-2021" are presented in Table 53 and Table 54.

Table 53 - Environmental status and objectives for the waterbody ROCT02_B2

River basin	Watercourse	Watercourse category	Water body typology	Environmental objective		Ecological status	Chemical condition
				Ecological status	Chemical condition	MP II	
Coastal waters	Eforie Nord - Vama Veche	CW	ROCT02	Good ecological status	Good chemical condition	Moderate	Good

HOTARAREA NR. 100

Privind aprobare P.U.Z. „Infiintare statie masurare gaze naturale si centru de control, realizare drum si traseu conducte subterane transport gaze naturale” cu amenajari aferente, spatii de circulatie si acces, pe de o parte si alte spatii conexe in comuna Tuzla, judetul Constanta

Consiliul Local Tuzla, intrunit in sedinta ordinara din data de 16.11.2020;
Avand in vedere:

- Cererea nr. 6908/24.08.2020 din partea ExxonMobil Exploration and Production Romania Limited;
- Referatul de aprobare al primarului, avizul comisiilor de specialitate, referatul de specialitate al compartimentului urbanism;
- Tinand seama de:
 - prevederile art. 46 alin. 1⁷ din Legea nr. 350/2001 privind amenajarea teritoriului si urbanismului, actualizata, Normele de aplicare a Legii nr. 350/2001 privind amenajarea teritoriului si urbanismului si ale art. 2 alin. (2) din Legea 50/1991 privind autorizarea executarii lucrarilor de constructii – Republicata;
 - HG 525/1996 pentru aprobarea Regulamentului General de Urbanism;
 - HCL 17/22.02.2013 privind aprobarea Regulamentului Local de implicare a publicului in elaborarea sau revizuirea planurilor de Urbanism si amenajare a teritoriului;
 - Legea 10/1995 privind calitatea in constructii;
 - HCL 66/27.06.2018 privind aprobarea avizului prealabil de oportunitate aferent proiectului;
 - HCL Constanta 152/22.05.2013 privind stabilirea suprafetelor minime de spatii verzi si a numarului minim de arbusi, arbori, plante decorative si flori aferente constructiilor realizate pe teritoriul administrativ al judetului Constanta;
 - HCL 47/11.04.2018 privind aprobarea Studiului de Oportunitate pentru „Infiintare statie masurare gaze naturale si centru de control, realizare drum si traseu conducte subterane transport gaze naturale”
- Certificatul de Urbanism nr. 4/19.01.2018 privind elaborare Plan Urbanistic Zonal emis de Consiliul Judetean Constanta ;
- Legea 351/2004 a gazelor ;

În temeiul art. 129 alin.(2), lit.b) alin.(4), lit.d) și art. 196 alin.(1), lit.a) din Ordonanța de Urgență a Guvernului nr.57/2019 privind Codul administrativ,

HOTARASTE:

ART.1 Se aproba Planul Urbanistic Zonal pe amplasamnetul in suprafata de 248.944 mp, conform anexei la prezenta hotarare.

ART.2 Primarul comunei Tuzla va asigura executarea prevederilor prezentei hotarari.

ART.3 Secretarul comunei va comunica prezenta hotarare Institutiei Prefectului – Judetul Constanta si primarului comunei Tuzla.

ART.4 Hotararea s-a adoptat cu un numar de 13 voturi „ pentru” , __-__voturi „ impotriva ”, __l__voturi „ abtineri ”, la sedinta fiind prezenti un numar de ____ consilieri din cei 14 in functie.

PRESEDINTE DE SEDINTĂ,

✍
CRISTIAN-STEFAN VITALIA

**AVIZAT PENTRU LEGALITATE,
SECRETAR GENERAL COMUNA TUZLA,**

CĂTRE,
PRIMĂRIA COMUNEI TUZLA

Ca urmare a cererii adresate de **EXXONMOBIL EXPLORATION AND PRODUCTION ROMÂNIA LIMITED NASSAU (BAHAMAS) și OMV PETROM S.A., reprezentată de Alin Știrbu** cu domiciliul/sediul în județul _____ municipiul/orașul/comuna **București** satul _____ sectorul **1** cod poștal _____ strada **Calea Floreasca** nr. **169A Corp B** bl. _____ sc. _____ et. _____ ap. _____ telefon/fax _____ e-mail _____ înregistrată la nr. **31925** din **14.11.2019** în conformitate cu prevederile **Legii nr. 350/2001** privind amenajarea teritoriului și urbanismul, cu modificările și completările ulterioare, se emite următorul:

AVIZ
nr. 67 din 27.11.2019

pentru **PLAN URBANISTIC ZONAL- ÎNFIINȚARE STAȚIE MĂSURARE GAZE NATURALE ȘI CENTRU DE CONTROL, REALIZARE DRUM ȘI TRASEU CONDUCTE SUBTERANE TRANSPORT GAZE NATURALE, EXTRAVILAN COMUNA TUZLA, JUD. CONSTANȚA**, generat de imobilul- Teren în suprafața de 248.944,00 mp

AMPLASAMENT: terenuri identificate cu nr. cadastrale 109216, 104087, 104089, 104094, 101418, 104096, 101462, 104086, 101414, 104110, 104098, 104287, 109217, 100178, 100818, 102101, 102099, 108896, 107123, 105769, 107386, 101055, 108897, 106654, 107418, 102100, 107373, 102098, extravilan com. Tuzla, jud. Constanța
INIȚIATOR/INVESTITOR: EXXONMOBIL EXPLORATION AND PRODUCTION ROMÂNIA LIMITED NASSAU (BAHAMAS) și OMV PETROM S.A.

PROIECTANT: RAMBOLL SOUTH EAST EUROPE S.R.L.– m. urb. Alexandru G. Dobra, specialist cu drept de semnătură RUR – D3, Dz0, E

Amplasare, delimitare, suprafață zonă studiată în P.U.Z.: **terenuri situate în extravilanul comunei Tuzla, zona imobilelor care au generat P.U.Z. este delimitată astfel:** nord – drumuri de exploatare (De 292/1, De 229/2), A259/89 (proprietar Diaconescu Tiberiu), A259/94 (proprietar BETA ACCENT S.R.L.), sud – A 259/105, A259/106 (proprietar Actual Cubic S.R.L.), est – De 269 (drum de exploatare situate de-a lungul falezei), vest- DN 39 (E 87);

Terenul din zona studiată este situat astfel: - cca. 1,4 km spre sud-est față de intravilanul comunei Tuzla, - cca. 0,04 km spre est față de DN 89 (E 87), - cca. 0,13 km spre vest față de intravilanul comunei Costinești, - cca. 61 m spre vest față de Marea Neagră.

Amplasamentul este situat la distanța de aprox. 1 km față de limita sitului ROSPA 0076 Marea Neagră și la distanța de aprox. 961 m față de limita sitului ROSCI0273 Zona marina de la Capul Tuzla.

-suprafață teren ce a generat PUZ: 248 944 mp;

-suprafață zonă studiată în PUZ: 248 944,00 mp.

Prevederi P.U.G./P.U.Z. - R.L.U. aprobate anterior: conform documentație de urbanism PUG aprobat prin HCL Tuzla nr. 141/2008, zona studiată se află la limita administrativă dintre comunele Tuzla și Costinești. În PUG, aprobat, comuna Tuzla aprobat, zona situată între faleza și calea ferată Constanța- Mangalia este propusă pentru o potențială extindere a intravilanului cu funcțiunea de locuire și turism.

- **UTR** – amplasamentul studiat face parte din extravilanului UAT Tuzla
- **funcțiuni predominante:** funcțiunea existentă – activități agricole (arabil, livezi), căi circulație;
- **regimul de înălțime:** nereglementat;
- **POT max** = nereglementat;
- **CUT max** = nereglementat;
- **retragerea minimă față de aliniament** = nereglementat;
- **retrageri minime față de limitele laterale** = nereglementat; se aplică conform Cod Civil
- **retrageri minime față de limitele posterioare** = nereglementat; se aplică conform Cod Civil
- **zone de interdicție temporară** -.

Prevederi P.U.Z. - R.L.U. propuse:

- **UTR** – se propune stabilirea reglementărilor urbanistice pentru terenurile cu funcțiunile de echipamente tehnico – edilitare, căi de comunicație rutieră și amenajări aferente, spații plantate.

- **Zonificare funcțională:**

1. **Zona TE STAȚIA DE REGLARE – MĂSURARE** - - **echipamente tehnico-edilitare, Terenul se propune pentru introducerea în intravilan ca trup izolat.**

Suprafața = 85.000 mp, parcela A289/1a LOT 1, nr. cad. 109216.

- **funcțiuni dominante:** - rețele conducte, stații reglare măsurare, centru comandă, lansator PIG, parcări.

Se admit cu condiționări următoarele utilizări: locuințe de serviciu cu regim de înălțime max. parter și suprafața construită max. 300 mp.

Suprafața edificabil = 51 397 mp

- **regimul de înălțime:** P +1E+M, H max.= 12,00 m;

- **POT max** = 60%;

- **CUT max** = 1,00;

- Suprafața spații verzi pe parcelă= min. 35%

- **regim de construire:** izolat, regimul de construire va fi dictat de fluxul tehnologic specific activităților;

- **retragerea minimă față de aliniament** = 10,00 m de la De ;

- **retrageri minime față de limitele laterale și posterioare**= 30,00 m de la limita parcelei la Nord, 10,00 m de la limita de Sud, 10,00 m de la limita de Vest, 43/100 de la limita de Est (zona de protecție a CF)

- **circulații și accese:** accesele principale se vor face din Dc 4 existent, prin traversarea liniei de cale ferată printr-un drum tehnologic temporar, pentru organizarea de șantier și prin intermediul drumului propus, cu acces din DN 39. Se vor amenaja locuri de parcare în limita parcelei;

- **echipare tehnico-edilitară:** Retelele de distribuție apă potabilă, rețelele de colectare – canalizare menajeră, rețeaua de distribuție energie electrică se vor realiza conform studiilor de specialitate și a avizelor de specialitate.

2. **Subzona Spp – SPAȚII VERZI DE PROTECȚIE**

- **funcțiuni dominante:** - spații verzi și plantate, cu rol de protecție, căi de acces către zona de echipamente tehnico-edilitare, construcții sau amenajări pentru extinderea, modernizare, traversarea, întreținerea rețelelor edilitare, cabine poartă, drumuri pentru acces incinte.

Se admit cu condiționări următoarele utilizări: echipamente tehnico-edilitare (posturi de transformare, stații de epurare, puțuri forate, etc.) se pot amplasa în interiorul fâșiei de protecție a infrastructurii edilitare, cabine poartă, drumuri pentru asigurarea accesului către incinte.

Este interzisă înființarea de parcări pe subzona Spp, sunt interzise lucrări de terasament să afecteze amenajările din domeniul public sau parcelele învecinate.

- **regimul de înălțime:** nu se prevăd construcții, cu excepția cabină poartă parter cu H max= 4,00 m;

- **POT max** = - %;

- **CUT max** = -;

- **regim de construire:** este interzisă amplasarea clădirilor în zonele de protecție a rețelelor edilitare, se pot amplasa rețele conducte, stații reglare măsurare, centru comandă, lansator PIG, parcări;

- **retragerea minimă față de aliniament:** se pot planta arbori la distanța de minim 2 m față de limitele de proprietate;
- **retragere minime față de limitele laterale și posterioare=** -
- **circulații și accese:** este interzisă construirea de străzi noi în interiorul zonelor verzi de protecție, cu excepția acceselor către zona de echipamente tehnico- edilitare, este interzisă înființarea de parcuri sau staționarea autovehiculelor pe subzona Spp

3. Zona Ccr- ZONĂ PENTRU CĂI DE COMUNICAȚIE RUTIERĂ

- **funcțiuni dominante:** - construcții, instalații și amenajări aferente traficului rutier, unități de întreținere și depozitare aferente traficului rutier, zonă care face legătura între DN39 și parcela pentru echipamente tehnico- edilitare (TE). Sunt interzise activități sau procese tehnologice de natură să producă poluare fonică sau chimică, cu efect asupra funcțiunilor învecinate parcelei, sunt interzise lucrări de terasament să afecteze amenajările din domeniul public sau parcelele învecinate.
- **circulații și accese:** se vor asigura accesele obligatorii, cu respectarea cerințelor tehnice specifice funcțiunii; necesarul de parcaje va fi dimensionat conform cerințelor tehnice specifice funcțiunii.

Se propune înființarea unui drum de acces nou din DN 39, drum asfaltat cu o ampriză de 11 m, care va fi construit de investitor.

Reglementări urbanistice: În zona de echipamente tehnico -edilitare (parcela A 289/1a Lot 1, nr. cad. 109216, S= 85 000 mp) se va institui o perdea verde perimetrală (lățime 10 m) ca subzonă funcțională Spp. Se vor institui zonele de siguranță și de protecție în zona conductelor de gaze naturale conform legislației în vigoare: **20 ml** în zona de protecție – interdicție de construire, **200 ml** în zona de siguranță – obligativitatea obținerii avizului operatorului conductelor pentru orice autorizație de construire.

În urma ședinței Comisiei tehnice de amenajare a teritoriului și de urbanism din data de 20.11.2019 se avizează ~~favorabil/cu condiții nefavorabile~~ Planul urbanistic zonal și Regulamentul local de urbanism aferent acestuia: PLAN URBANISTIC ZONAL - ÎNFIINȚARE STAȚIE MĂSURARE GAZE NATURALE ȘI CENTRU DE CONTROL, REALIZARE DRUM ȘI TRASEU CONDUCTE SUBTERANE TRANSPORT GAZE NATURALE, EXTRAVILAN COMUNA TUZLA, JUD. CONSTANȚA, generat de imobilul- Teren în suprafața de 248.944,00 mp

AMPLASAMENT: terenuri identificate cu nr. cadastrale 109216, 104087, 104089, 104094, 101418, 104096, 101462, 104086, 101414, 104110, 104098, 104287, 109217, 100178, 100818, 102101, 102099, 108896, 107123, 105769, 107386, 101055, 108897, 106654, 107418, 102100, 107373, 102098, extravilan com. Tuzla, jud. Constanța, cu următoarele condiții:

Documentația se va completa cu avizul Comitetului Național al Zonei Costiere, iar condițiile/observațiile se vor prelua în documentația de urbanism (parte scrisă și parte desenată). Se va solicita avizul de amplasament S.N.T.G.N.TRANSGAZ S.A. Mediaș.

Se vor respecta condițiile/specificațiile menționate în avizele și acordurile obținute, iar în documentația de urbanism se vor introduce toate observațiile din avize/acorduri:

- se vor prelua în RLU aferent PUZ toate recomandările din Raportul de Mediu și se vor respecta obligațiile cf. prevederilor HG nr. 1076/2004 specificate în Aviz de mediu nr. 6/21.10.2019, emis de Agenția pentru protecția Mediului Constanța,

- se vor reprezenta pe planuri culoarele/zonle de protecție și siguranță ale conductelor de refulare ape uzate existente (Dn500mm OL și Dn250 mm OL) și se vor menționa în partea scrisă condițiile menționate în Avizul de amplasament nr. 404/6635/28.05.2018, eliberat de RAJA S.A. Constanța,

- se va întocmi planșa privind echiparea tehnico -edilitară a întregii zone studiate și reglementate în PUZ, cu reprezentarea rețelelor existente și a celor propuse,

- pe planșa de echipare tehnico - edilitară se vor reprezenta cablurile Tc existente, cf. Aviz condiționat nr. 674/03.06.2018, eliberat de S.C. TELEKOM ROMÂNIA COMMUNICATIONS S.A.,

- la următoarele etape ale realizării construcțiilor se vor avea în vedere condițiile specificate în Avizul nr.845/U/13.05.2019, emis de Direcția Județeană pentru Cultură Constanța, condițiile din Avizul Statului Major al Apărării nr. DT4266/22.06.2018, condițiile menționate în Avizul Ministerului Afacerilor Interne nr.

418352/01.11.2018, condițiile Administrației Naționale Apele Române, specificate în Avizul de gospodărire a apelor nr. 89/27.11.2018, revenirea pentru obținerea avizului Autorității Aeronautică Civilă Română la faza A.C.,

- se vor respecta observațiile menționate în adresa Ministerului Dezvoltării Regionale și Administrației Publice, nr. 52654/10.05.2018,

- se vor menționa în documentație și se vor respecta condițiile și precizările din avizul Sucursalei Regionale CF Constanța nr. 7/2/2501/08.08.2019,

- se vor reprezenta, în partea scrisă și partea desenată a PUZ-ului, propunerile avizate de Compania Națională a Infrastructurii Rutiere S.A., respectiv varianta accesului prin intermediul unui sens giratoriu (conform documentației vizată de administratorul drumului) menționată în Documentul de avizare nr. 190702-3/02.07.2019 și se vor respecta la următoarele faze de proiectare condițiile menționate,

- în cazul în care se vor propune lucrări pe terenuri care nu sunt proprietatea investitorului se va obține acordul deținătorilor terenurilor,

- după aprobarea Planului Urbanistic Zonal, prevederile acestuia se vor prelua în Planul Urbanistic General.

În conformitate cu prevederile Legii nr. 350/2001 (*actualizată*) privind amenajarea teritoriului și urbanismul: art. 47¹ (2) - după aprobarea prin hotărârea consiliului local a PUG și PUZ, primăriile sunt obligate să transmită hotărârea însoțită de documentația de aprobare a PUG și PUZ către oficiul de cadastru și publicitate imobiliară, în vederea actualizării din oficiu a destinației imobilelor înregistrate în sistemul integrat de cadastru și carte funciară; după aprobare, un exemplar al documentației de urbanism, însoțit de hotărârea Consiliului Local, se înaintează Consiliului Județean Constanța, în format electronic, pentru a fi transmis Ministerului Dezvoltării Regionale și Administrației Publice în vederea preluării informațiilor în Observatorul Teritorial Național,.

Prezentul aviz este valabil numai împreună cu planșa de reglementări anexată și vizată spre neschimbare. Elaboratorul și beneficiarul P.U.Z. răspund pentru exactitatea datelor și veridicitatea înscrisurilor cuprinse în P.U.Z. care face obiectul prezentului aviz, în conformitate cu art. 63 alin. (2) lit. g) din Legea nr. 350/2001 privind amenajarea teritoriului și urbanismul, cu modificările și completările ulterioare.

Prezentul aviz este un aviz tehnic și poate fi folosit numai în scopul aprobării P.U.Z.

Proiectul pentru autorizația de construire (DTAC) se poate întocmi numai după aprobarea P.U.Z. și cu obligativitatea respectării întocmai a prevederilor acestuia.

Prezentul aviz este valabil de la data emiterii sale pe toată durata de valabilitate a certificatului de urbanism nr. 4 din 19.01.2018, emis de Consiliul Județean Constanța.

**3 - NAMR address nr. 4382/08.04.2021 confirming the quality of holder
of the oil agreement**

AGENȚIA NAȚIONALĂ PENTRU RESURSE MINERALE

CABINET PREȘEDINTE

Către: ExxonMobil Exploration and Production Romania Limited

fax: 031.860.7280

În atenția: Domnului Alin ȘTIRBU, Manager

Referitor la: Confirmare titular acord de concesiune pentru explorare, dezvoltare și exploatare petrolieră în perimetrul XIX Neptun, zona estică/mare adâncă

Urmarea adresei dv. nr.210407-1/07.04.2021, înregistrată la Agenția Națională pentru Resurse Minerale sub nr.4289/07.04.2021, prin prezenta, confirmăm faptul că actualul titular al Acordului de concesiune pentru explorare, dezvoltare și exploatare petrolieră în perimetrul XIX Neptun, aprobat prin H.G. nr.1233/2000, astfel cum acesta a fost modificat prin Actul adițional nr.1, aprobat prin H.G. nr.1928/2004, Actul adițional nr.2, aprobat prin H.G. nr.800/2011, Actul adițional nr.3, aprobat prin H.G. nr.551/2013, Actul adițional nr.4, aprobat prin H.G. nr.1003/2018, Actul adițional nr.5, aprobat prin H.G. nr.37/2019 în ceea ce privește zona estică/mare adâncă (zona A), este constituit din următoarele companii:

- ExxonMobil Exploration and Production Romania Limited, cotă participare 50%,
- OMV Petrom S.A., cotă participare 50%,

potrivit Ordinului Președintelui A.N.R.M. nr.238/2008 privind transferul a 50% din drepturile dobândite și obligațiile asumate prin Acordul de concesiune pentru explorare, dezvoltare și exploatare petrolieră în perimetrul XIX Neptun, zona estică, de la Petrom S.A.

Operatorul desemnat de Titularul acordului de concesiune, ExxonMobil Exploration and Production Romania Limited împreună cu Petrom S.A., este compania ExxoMobil Exploration and Production Romania Limited, care are responsabilitatea de a executa operațiunile petroliere conform prevederilor contractuale din Acordul de concesiune pentru explorare, dezvoltare și exploatare petrolieră în perimetrul XIX Neptun, în conformitate cu Notificarea nr.2927/A.P./27.10.2011.

Prezentul document a fost eliberat pentru obținerea diverselor documente necesare autorizației de construire - Certificat de urbanism și alte avize subsecvente.

PREȘEDINTE,
Daniel Grigoriu-Norocel

DECIZIE

Nr. 490 din 06.10.2021

**privind aprobarea Normelor metodologice privind implementarea obiectivelor de conservare din
Anexa la Ordinul nr. 1433/2016 privind aprobarea Planului de management și a Regulamentului sitului
Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla**

Având în vedere:

- Hotărârea Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arie Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului;
- Legea nr. 95/2016 privind înființarea Agenției Naționale pentru Arie Naturale Protejate și pentru modificarea Ordonanței de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, cu modificările și completările ulterioare;
- Hotărârea nr. 867/2018 pentru modificarea și completarea Hotărârii Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arie Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului;
- Referatul Serviciului Monitorizare Arie Naturale Protejate, Relația cu Comunitățile Locale, Proceduri Certificare de Marcă, Parcuri, nr. 349/05.10.2021 privind aprobarea Normelor metodologice privind implementarea obiectivelor de conservare pentru situl ROSCI0273 Zona marină de la Capul Tuzladin Anexa la Ordinul nr. 1433/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla.

În conformitate cu prevederile:

- Ordonanței de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, aprobată cu modificări și completări prin Legea nr. 49/2011, cu modificările și completările ulterioare;

În temeiul:

- Articolele 16 - 21 din Ordonanța de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, aprobată cu modificări și completări prin Legea nr. 49/2011, cu modificările și completările ulterioare;
- Legii nr. 220/2019 privind modificarea și completarea unor acte normative din domeniul protecției mediului;
- Art. 3 alin.(3) din Hotărârea Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arie Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului,

În conformitate cu:

- Proiectul "Asistență pentru AM POIM în procesul de pregătire a proiectelor pentru asigurarea respectării prevederilor directivei 92/43/CEE privind conservarea habitatelor naturale și a speciilor de floră și faună sălbatice și a directivei 79/409/CEE privind conservarea păsărilor sălbatice", cod proiect 140564, beneficiar Ministerul Fondurilor Europene – Autoritatea de Management pentru Programul Operațional Infrastructură Mare, prin care a fost elaborată și asumată anexa privind aprobarea Normelor metodologice privind implementarea obiectivelor de conservare din Anexa la Ordinul nr. 1433/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla,

președintele Agenției Naționale pentru Arii Naturale Protejate emite prezenta:

DECIZIE

- Art.1.** Începând cu data prezentei decizii, se aprobă Normele metodologice privind implementarea obiectivelor de conservare pentru aria ROSCI0273 Zona marină de la Capul Tuzla din Anexa la Ordinul nr. 1433/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla, prevăzute în anexa care face parte integrantă din prezenta decizie.
- Art.2.** Aplicarea Normelor metodologice este responsabilitatea administratorilor ariilor naturale protejate care fac obiectul Ordinul nr. 1433/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla.
- Art. 3.** Prezenta decizie va fi comunicată personalului ANANP și administratorilor prevăzuți în art. 2 prin grija Serviciul Monitorizare Arii Naturale Protejate, Relația cu Comunitățile locale, Proceduri de Marcă, Parcuri.
- Art. 4.** Prezenta decizie are caracter obligatoriu și face obiectul evaluării anuale a activității.

Președinte,

Adi CROITORU

Obiective de conservare specifice sitului
ROSCI0273 Zona marină de la Capul Tuzla

Zona marină de la Capul Tuzla, a fost declarată sit de importanță comunitară, având codul ROSCI0273, prin Ordinul ministrului mediului și pădurilor nr. 1964/2007 privind instituirea regimului de arie naturală protejată a siturilor de importanță comunitară, ca parte integrantă a rețelei ecologice europene Natura 2000 în România, cu modificările și completările ulterioare. Situl este amplasat în zona marină a Mării Negre, are o suprafață de 1.738 ha, și este situat la o distanță de 20 km sud de municipiul Constanța și 20 km nord de Mangalia. În situl Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla, fundul stâncos recifal are cea mai mare extindere spre larg și cel mai variat și accidentat relief din sectorul românesc al Mării Negre. De aceea, aici se întâlnește cea mai diversă gamă de microhabitate de acest tip și în consecință, o faună și floră acvatică foarte diversă. Habitate și specii de interes comunitar prezente: 1110 Bancuri de nisip submerse de mică adâncime, 1140 Suprafețe de nisip și mâl descoperite la marea joasă, 1170 Recifi, 8330 Peșteri scufundate complet sau parțial, 4125 *Alosa immaculata*, 4127 *Alosa tanaica*, 1351 *Phocoena phocoena*, 1349 *Tursiops truncatus*.

Planul de management al sitului Natura 2000 ROSCI0273 Zona marină de la Capul Tuzla, din 11.07.2016. Publicat în Monitorul Oficial, Partea I nr. 712bis din 14 septembrie 2016.

Zaharia, T., Anton, E., Radu, G. 2013. Ghid sintetic de monitorizare pentru speciile marine și habitatele costiere și marine de interes comunitar din România. Ed. Boldăș.

1110 - Bancuri de nisip submerse de mică adâncime

Suprafața acestui tip de habitat în situl ROSCI0273 este de **450 ha** conform Formularului standard al sitului (planul de management nu menționează suprafața). Are o stare de conservare **favorabilă**. Obiectivul de conservare specific sitului pentru acest habitat este **menținerea stării de conservare favorabile**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoarea țintă	Informații suplimentare
Suprafață habitat	Ha	Cel puțin 450	Habitatul este reprezentat de cinci subtipuri, conform descrierii planului de management, dar nu au fost cartate suprafețele specifice pentru fiecare. Subtipurile sunt următoarele:
Suprafață subtip 1110-3			1110-3 Nisipuri fine de mică adâncime;

Suprafață subtip 1110-4			1110-4 Nisipuri bine calibrate;
Suprafață subtip 1110-5			1110-5 Nisipuri grosiere și pietrișuri mărunte bătute de valuri;
Suprafață subtip 1110-6			1110-6 Galeți infralitorali;
Suprafață subtip 1110-9			1110-9 Nisipuri măloase și mături nisipoase bioturbate de Upogebia.
Specii de nevertebrate caracteristice	Abundența specii / mp	Cel puțin 30	Conform Zaharia și colab. (2013), structura pe specii contribuie la definirea structurii biocenozelor marine. Speciile caracteristice sunt specii de moluște: <i>Lentidium mediterraneum</i> , <i>Donax trunculus</i> , <i>Chamelea gallina</i> , <i>Mya arenaria</i> , <i>Anadara inaequalis</i> , <i>Cyclope neritea</i> , <i>Nassarius nitidus</i> , <i>Cerastoderma glaucum</i> , <i>Tellina tenuis</i> , <i>Loripes lacteus</i> , <i>Lucinella divaricata</i> , <i>Solen marginatus</i> , respectiv crustacei: <i>Polydora vernalis</i> , <i>Diogenes pugilator</i> , <i>Crangon crangon</i> , <i>Upogebia pusilla</i> , <i>Carcinus aestuarii</i> , <i>Xantho poressa</i> . Valoarea actuală a parametrului va fi documentată în termen de 3 ani.
Specii indicatoare de perturbări	Prezență / absență	Absență	Speciile de alge verzi indică perturbări în structura habitatului sau schimbarea calității biotopului. Valoarea parametrului Trebuie documentat în termen de 3 ani.
Adâncimea apei	m	Cel puțin 0,5	Habitatul trebuie să fie permanent acoperit cu apă.
Starea ecologică a apei pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Conform raportului național pe calitatea apelor, în zona costieră a Mării Negre, încărcarea organică determinată prin CCO-Mn și CBO5 și nutrienții au înregistrat valori ridicate în secțiunile cu impact antropic ridicat. Încărcarea organică: Valori mai mari s-au înregistrat numai în secțiunea Constanta Sud Dana 69 la țarm (4,75 – 76,68 mg O ₂ / dm ³ CCO- Mn și 2,98 – 19,8 mg O ₂ / dm ³ CBO5); Nutrienți Azot mineral total - Constanta Sud - Dana 69 la țarm (valoarea medie înregistrată a fost de 2,437 mg / dm ³); - Constanta Sud - Dana 78 la țarm (valoarea medie înregistrată a fost de 2,05 mg / dm ³); Fosfor total - Constanta Nord Pescărie la țarm (valoarea medie înregistrată a fost de 0,20 mg /dm ³); Dintre metalele grele analizate, mercurul a fost prezent în aproape toate secțiunile de monitoring și a înregistrat valori ridicate. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.

Starea ecologică a apei pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Analiza cantitativă a fitoplanctonului a evidențiat cea mai ridicată valoare a biomasei fitoplanctonice 305,67 mg/dm ³ la izobata de 5 m în secțiunea Fertilchim Năvodari. - Analiza cantitativă a macronevertebratelor a evidențiat valori asemănătoare ale densității taxonilor în toate secțiunile monitorizate cuprinse între 709 – 996 ex/m ² . Analiza valorilor indicelui Shannon - Wiener a evidențiat valori scăzute în următoarele secțiuni: - Fertilchim Năvodari la țarm 1,81 și izobata 5 m 1,76; - Constanta Nord țarm 1,62; - Avangport Mangalia țarm 1,89. În celelalte secțiuni monitorizate indicele Shannon – Wiener a înregistrat valori cuprinse între 2,29 – 2,68. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
---	-----------------------------	--------------------------------	---

1140 - Suprafețe de nisip și mâl descoperite la maree joasă

Conform Planului de management, până de curând habitatul **1140** avea în sit o mare valoare conservativă datorită existenței litoralului stâncos natural, care nu este prezent în România decât în câteva puncte: Agigea, Tuzla, Costinești, Vama Veche. Din păcate acesta a fost complet distrus în zona Tuzla în anii 2010 și 2011 prin lucrări hidrotehnice de protecție costieră. Pe de altă parte, Planul de management susține că starea de conservare este favorabilă. Formularul standard actualizat în 2020 prevede aici existența unei suprafețe de **2 ha** a habitatului. Prezența habitatului trebuie verificat în termen de 1 an, iar pe baza rezultatelor, va fi formulat obiectiv de conservare pentru acest tip de habitat.

1170 - Recifi

Suprafața habitatului în situl ROSCI0273 este de **1285 ha** conform Formularului standard al sitului (planul de management nu menționează suprafața integrală, numai a subtipului **1170-9**). Starea de conservare este **favorabilă**, conform informațiilor din Planul de management. Obiectivul de conservare specific sitului pentru acest tip de habitat este **menținerea stării de conservare**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoare țintă	Informații suplimentare
Suprafață habitat	ha	Cel puțin 1285	Habitatul este reprezentat de șapte subtipuri: 1170-2 Recifi biogeni de <i>Mytilus galloprovincialis</i> ; 1170-4 Aglomerări de stânci și bolovani - conform planului de management prezente în sit doar sub formă artificială (diguri); 1170- 5 Stâncă supralitorală - situată deasupra nivelului mării și este umezită de stropii valurilor sau udată în timpul furtunilor, 1170-6 Stâncă mediolitorală superioară - situată în partea superioară a zonei de spargere a valurilor și nu este acoperită permanent de apă, 1170-7 Stâncă mediolitorală inferioară - situată în partea inferioară a zonei de spargere a valurilor,

			<p>1170-8 Stâncă infralitorală cu alge fotofile - centurile de <i>Cystoseira</i>, au o distribuție fragmentară, una din puținele fragmente rămase este la Mangalia, conform planului de management;</p> <p>1170-9 Stâncă circalitorală cu <i>Mytilus galloprovincialis</i> - acoperă fundul stâncos, sunt prezente și în habitatul anterior, dar devin dominante începând de la limita inferioară a acestuia, continuând ca un covor compact până la limita inferioară a distribuției substratului stâncos, 30-35 metri adâncime.</p>
Suprafața subtipurilor de habitat	Ha	Trebuie definită în termen de 3 ani	Nu sunt disponibile informații cu privire la suprafața subtipurilor, numai pentru subtipul 111-9. Pentru aceasta din urmă, planul recomandă valori limită pentru stare de conservare favorabilă, precum: Acoperirea cu <i>Mytilus</i> în interiorul habitatului peste 80%, Dimensiunea mediană a exemplarelor de <i>Mytilus galloprovincialis</i> , lungimea cochiliei peste 50 mm, Biomasa vie a <i>Mytilus galloprovincialis</i> peste 7000 g/mp, Frecvența decapodului <i>Eriphia verrucosa</i> în patrate de 1 mp peste 30%.
Suprafața subtip 1110-9	ha	Cel puțin 586,23	
Integritatea spațială a habitatului / conectivitate	număr fragmente	Cel mult 2	Nu sunt disponibile date despre fragmentarea habitatului în sit, dar în general starea de conservare favorabilă este asigurată de continuitatea habitatelor. Trebuie documentat în termen de 3 ani.
Prezența speciilor indicatoare de perturbări	prezență/absență	0	Astfel de specii pot fi (conform Mountford și colab. 2008): <i>Ulva</i> sp., <i>Enteromopha</i> sp., <i>Cladophora</i> sp. Valoarea parametrului Trebuie documentat în termen de 3 ani.
Starea ecologică a apei pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Conform raportului național pe calitatea apelor, în zona costieră a Mării Negre, încărcarea organică determinată prin CCO-Mn și CBO5 și nutrienții au înregistrat valori ridicate în secțiunile cu impact antropic ridicat. Încărcarea organică: Valori mai mari s-au înregistrat numai în secțiunea Constanta Sud Dana 69 la țărm (4,75 – 76,68 mg O ₂ / dm ³ CCO- Mn și 2,98 – 19,8 mg O ₂ / dm ³ CBO5); Nutrienți Azot mineral total - Constanta Sud - Dana 69 la țărm (valoarea medie înregistrată a fost de 2,437 mg / dm ³); - Constanta Sud - Dana 78 la țărm (valoarea medie înregistrată a fost de 2,05 mg / dm ³); Fosfor total - Constanta Nord Pescărie la țărm (valoarea medie înregistrată a fost de 0,20 mg /dm ³); Dintre metalele grele analizate, mercurul a fost prezent în aproape toate secțiunile de monitoring și a înregistrat valori ridicate. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.

Starea ecologică a apei pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Analiza cantitativă a fitoplanctonului a evidențiat cea mai ridicată valoare a biomasei fitoplanctonice 305,67 mg/dm ³ la izobata de 5 m în secțiunea Fertilchim Năvodari. - Analiza cantitativă a macronevertebratelor a evidențiat valori asemănătoare ale densității taxonilor în toate secțiunile monitorizate cuprinse între 709 – 996 ex/m ² . Analiza valorilor indicelui Shannon - Wiener a evidențiat valori scăzute în următoarele secțiuni: - Fertilchim Năvodari la țarm 1,81 și izobata 5 m 1,76; - Constanta Nord țarm 1,62; - Avangport Mangalia țarm 1,89. În celelalte secțiuni monitorizate indicele Shannon – Wiener a înregistrat valori cuprinse între 2,29 – 2,68. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
---	-----------------------------	--------------------------------	---

8330 - Peșteri scufundate complet sau parțial

Habitatul constă din peșteri situate sub nivelul mării sau deschise spre mare, cel puțin în perioadele de maree înaltă, incluzând peșterile marine parțial submerse. Fundul și pereții laterali ai acestor peșteri adăpostesc comunități de nevertebrate marine și de alge, comunități de alge roșii sciafile. Dintre speciile de alge roșii se remarcă *Hildebrandtia prototypus* și *Phyllophora nervosa*. Fauna este dominată de spongieri, cnidari, briozoare, ascidii, crustacee mysidae și decapode și pești cavernicoli. Planul de management al ROSCI0273 nu conține informații cu privire la suprafața acestui tip de habitat, dar formularul standard actualizat menționează suprafața de **0.7 ha**, și un număr de **7 peșteri**. Starea de conservare este **necunoscută** în Planul de management și **bună** în Formularul standard actualizat. Astfel, obiectivul de conservare specific sitului pentru acest tip de habitat este **îmbunătățirea sau menținerea stării de conservare**, în funcție de rezultatele investigațiilor care vizează clarificarea stării de conservare, în termen **de 2 ani**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoare țintă	Informații suplimentare
Suprafață habitat	ha	Cel puțin 0.7	Conform formularului standard actualizat, habitatul are o suprafață de 0.7 ha în ROSCI0273. Suprafața poate să scadă în mod natural prin eroziune / colmatare / surpare, sau în mod artificial prin modificarea fundului / malului mării sau ale falezelor, prin activități antropice. Pentru menținerea stării de conservare a habitatului în sit, modificările artificiale prin activități antropice trebuie prevenite.
Număr peșteri	nr.	Cel puțin 7	Conform Formularului standard actualizat, habitatul include 7 peșteri în ROSCI0273. Numărul peșterilor poate să scadă în mod natural prin eroziune / colmatare / surpare, sau în mod artificial prin modificarea fundului / malului mării sau ale falezelor, prin activități antropice. Pentru menținerea stării de conservare a habitatului în sit, modificările artificiale prin activități antropice trebuie prevenite.

Dimensiunile interne ale peșterilor	m	Trebuie definită în termen de 2 ani	Parametrul trebuie definit prin cartarea peșterilor submerse cunoscute din sit.
Număr specii în biocenozele caracteristice sitului	Număr specii	Trebuie definită în termen de 2 ani	Parametrul se poate stabili prin observații directe, atât pentru peșteri individuale, cât și la nivelul sitului.
Modelul spațial al biocenzelor caracteristice	Tipuri de biocenoze și distribuția lor în interiorul peșterilor individuale	Trebuie definită în termen de 2 ani	Distribuția spațială a biocenzelor în interiorul unei peșteri este de obicei un răspuns la condițiile fizice dominante și la structura / morfologia peșterii.
Densitatea populației de <i>Halichondria panicea</i> în habitat	Număr colonie / m ²	Cel puțin 1	Valoarea țintă indicată în planul de management ROSCI0273 Zona marină de la Capul Tuzla este de cel puțin 1 colonie / m ² .
Frecvența <i>Hemimysis serrata</i> în grote	%	Cel puțin 80	Valoarea țintă indicată în planul de management ROSCI0273 Zona marină de la Capul Tuzla este de cel puțin 80%.
Starea ecologică a apei pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Conform raportului național pe calitatea apelor, în zona costieră a Mării Negre, încărcarea organică determinată prin CCO-Mn și CBO5 și nutrienții au înregistrat valori ridicate în secțiunile cu impact antropic ridicat. Încărcarea organică: Valori mai mari s-au înregistrat numai în secțiunea Constanta Sud Dana 69 la țarm (4,75 – 76,68 mg O ₂ / dm ³ CCO- Mn și 2,98 – 19,8 mg O ₂ / dm ³ CBO5); Nutrienți Azot mineral total - Constanta Sud - Dana 69 la țarm (valoarea medie înregistrată a fost de 2,437 mg / dm ³); - Constanta Sud - Dana 78 la țarm (valoarea medie înregistrată a fost de 2,05 mg / dm ³); Fosfor total - Constanța Nord Pescărie la țarm (valoarea medie înregistrată a fost de 0,20 mg /dm ³); Dintre metalele grele analizate, mercurul a fost prezent în aproape toate secțiunile de monitoring și a înregistrat valori ridicate. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
Starea ecologică a apei pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Analiza cantitativă a fitoplanctonului a evidențiat cea mai ridicată valoare a biomasei fitoplanctonice 305,67 mg/dm ³ la izobata de 5 m în secțiunea Fertilchim Năvodari. - Analiza cantitativă a macronevertebratelor a evidențiat valori asemănătoare ale densității taxonilor în toate secțiunile monitorizate cuprinse între 709 – 996 ex/m ² . Analiza valorilor indicelui Shannon - Wiener a evidențiat valori scăzute în următoarele

			secțiuni: - Fertilchim Năvodari la țarm 1,81 si izobata 5 m 1,76; - Constanta Nord țarm 1,62; - Avandport Mangalia țarm 1,89. În celelalte secțiuni monitorizate indicele Shannon – Wiener a înregistrat valori cuprinse între 2,29 – 2,68. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
--	--	--	--

4125 - *Alosa immaculata* (Scrumbie de Dunăre)

Conform Planului de management starea de conservare a speciei a fost evaluată ca **fiind favorabilă**. Obiectivul de conservare la nivel de sit pentru această specie este **menținerea stării de conservare**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoare țintă	Informații suplimentare
Mărime populație	Număr indivizi	Trebuie definită în termen de 3 ani	Conform Planului de management datele au fost colectate în perioada de primăvară, când exemplarele în vârstă de 4-6 ani predominau capturile, ceea ce indică folosirea sitului ca zonă de tranzit pentru efectuarea migrației.
Compoziția pe clase de vârstă a populației	Prezența juvenilor în captură la pescuitul științific cu năvodul de plajă (indivizi / toană)	Cel puțin 3	Prezența juvenilor în captură la pescuitul științific cu năvodul de plajă: ≥ 3 indivizi / toană.
Suprafața habitatului adecvat speciei	ha	Trebuie definită în termen de 3 ani	Conform Planului de management suprafața habitatului este suficient de mare, și stabilă sau în creștere, și calitatea habitatului este adecvată pentru supraviețuirea pe termen lung a speciei.
Specii de pești invazive / alohtone	Prezență / absență Abundență	Absență 0	Conform Planului de management nu au fost identificate specii invazive/alohotone de pești.
Starea ecologică a corpului de apă pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Conform raportului național pe calitatea apelor, în zona costieră a Mării Negre, încărcarea organică determinată prin CCO-Mn și CBO5 și nutrienții au înregistrat valori ridicate în secțiunile cu impact antropic ridicat. Încărcarea organică: Valori mai mari s-au înregistrat numai în secțiunea Constanta Sud Dana 69 la țarm (4,75 – 76,68 mg O ₂ / dm ³ CCO- Mn

			și 2,98 – 19,8 mg O ₂ / dm ³ CBO ₅); Nutrienți Azot mineral total - Constanta Sud - Dana 69 la țarm (valoarea medie înregistrată a fost de 2,437 mg / dm ³); - Constanta Sud - Dana 78 la țarm (valoarea medie înregistrată a fost de 2,05 mg / dm ³); Fosfor total - Constanta Nord Pescărie la țarm (valoarea medie înregistrată a fost de 0,20 mg /dm ³); Dintre metalele grele analizate, mercurul a fost prezent în aproape toate secțiunile de monitoring și a înregistrat valori ridicate. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
Starea ecologică a corpului de apă pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Analiza cantitativă a fitoplanctonului a evidențiat cea mai ridicată valoare a biomasei fitoplanctonice 305,67 mg/dm ³ la izobata de 5 m în secțiunea Fertilchim Năvodari. - Analiza cantitativă a macronevertebratelor a evidențiat valori asemănătoare ale densității taxonilor în toate secțiunile monitorizate cuprinse între 709 – 996 ex/m ² . Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.

4127 - *Alosa tanaica* (Rizeafcă)

Conform Planului de management, starea de conservare a speciei a fost evaluată **ca fiind favorabilă**. Obiectivul de conservare la nivel de sit pentru această specie este **menținerea stării de conservare**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoare țintă	Informații suplimentare
Mărime populație	Număr indivizi	Trebuie definită în termen de 3 ani	Conform Planului de management specia este prezentă în tot lungul coastei Mării Negre pentru cea mai mare parte a anului.
Densitate populație	Număr indivizi /100 m ²	Trebuie definită în termen de 3 ani	Nu sunt disponibile informații legate de acest parametru. Valoarea țintă pentru acest parametru trebuie definită pe baza unor studii din teren în termen de trei ani.
Compoziția pe clase de vârstă a populației	Prezența juvenilor în captură la pescuitul științific cu năvodul de	Cel puțin 3	Prezența juvenilor în captură la pescuitul științific cu năvodul de plajă: ≥ 3 indivizi / toană.

	plajă (indivizi / toană)		
Suprafața habitatului	ha	Trebuie definită în termen de 3 ani	Conform Planului de management suprafața habitatului este suficient de mare, și stabilă sau în creștere, și calitatea habitatului este adecvată pentru supraviețuirea pe termen lung a speciei.
Specii de pești invazive / alohtone	Prezență / absență Abundență	Absență 0	Conform Planului de management nu au fost identificate specii invazive/alohone de pești.
Starea ecologică a corpului de apă pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Conform raportului național pe calitatea apelor, în zona costieră a Mării Negre, încărcarea organică determinată prin CCO-Mn și CBO5 și nutrienții au înregistrat valori ridicate în secțiunile cu impact antropic ridicat. Încărcarea organică: Valori mai mari s-au înregistrat numai în secțiunea Constanta Sud Dana 69 la țarm (4,75 – 76,68 mg O ₂ / dm ³ CCO- Mn și 2,98 – 19,8 mg O ₂ / dm ³ CBO5); Nutrienți Azot mineral total - Constanta Sud - Dana 69 la țarm (valoarea medie înregistrată a fost de 2,437 mg / dm ³); - Constanta Sud - Dana 78 la țarm (valoarea medie înregistrată a fost de 2,05 mg / dm ³); Fosfor total - Constanta Nord Pescărie la țarm (valoarea medie înregistrată a fost de 0,20 mg /dm ³); Dintre metalele grele analizate, mercurul a fost prezent în aproape toate secțiunile de monitoring și a înregistrat valori ridicate. Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.
Starea ecologică a corpului de apă pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Analiza cantitativă a fitoplanctonului a evidențiat cea mai ridicată valoare a biomasei fitoplanctonice 305,67 mg/dm ³ la izobata de 5 m în secțiunea Fertilchim Năvodari. - Analiza cantitativă a macronevertebratelor a evidențiat valori asemănătoare ale densității taxonilor în toate secțiunile monitorizate cuprinse între 709 – 996 ex/m ² . Trebuie analizate și încorporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă la nivel de sit în termen de 1 an.

1349 - *Tursiops truncatus* (AfaLin)

AfaLinul este prezent în zona marină românească în sezonul cald, pe toată suprafața platoului continental. **Pătrunde și în Dunăre.** Prezent în toate siturile, se deplasează în grupuri familiale de **4-6 indivizi**. Este cel mai sociabil față de om și cel mai des observat. În ROSCI0273 specia utilizează zona ca loc de pasaj și hrănire, fiind observate **5-20 de exemplare** pe parcursul sezonelor primăvară, vară, toamnă în perioada 2007-2010. Specia utilizează atât zona de mal, cât și zona de larg, efectiv întreaga suprafață a sitului. Poate și observată și în incintele porturilor, uneori în dreptul porților de ecluzare din mare în canalele care fac legătura cu Dunărea. În urmărirea hranei nu ezită să pătrundă și în zonele poluate din incinta și raza porturilor sau a platformelor petroliere. Suprafața habitatului din sit este suficient de mare, dar calitatea habitatului este afectată de impactul generat de activități antropice. În Planul de management starea de conservare a speciei a fost evaluată ca fiind **nefavorabilă - neadecvată**. Obiectivul de conservare specific sitului pentru această specie este **îmbunătățirea stării de conservare**, definit prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoare țintă	Informații suplimentare
Mărimea populației	Număr indivizi	Cel puțin 20	În ROSCI0273 specia utilizează zona ca loc de pasaj și hrănire, fiind observate 5-20 de exemplare pe parcursul sezonelor primăvară, vară, toamnă în perioada 2007-2010. Mărimea populației se poate estima prin numărare, foto-identificare, capturi accidentale și eșuări.
Tendința mărimii populației	Tendința unităților de reproducere	Stabilă sau în creștere	Pentru documentarea acestui parametru trebuie introdus un program de monitorizare a speciei în sit.
Structura populației	Structura pe clase de vârstă	Prezența tuturor generațiilor	Pe baza aprecierii vizuale în mod arbitrar, cu clasele de vârstă: nou născut (N), pui (P), tânăr (T), adult (A). Exemplu: 12A2T1P1N - 12 adulți, 2 tineri, 1 pui, 1 nou născut. De stabilit în termen de 2 ani.
Suprafața habitatului	Ha	Cel puțin 4.900	Specia utilizează atât zona de mal, cât și zona de larg, efectiv întreaga suprafață a sitului. Poate și observată și în incintele porturilor, uneori în dreptul porților de ecluzare din mare în canalele care fac legătura cu Dunărea. În urmărirea hranei nu ezită să pătrundă și în zonele poluate din incinta și raza porturilor sau a platformelor petroliere.
Tipar de distribuție	Tipar spațial și temporal, intensitatea utilizării habitatelor	Fără scădere semnificativă a tiparului spațial, temporal sau a intensității utilizării habitatelor altele decât cele rezultate din variații naturale	Trebuie introdus un program de monitorizare în termen de 2 ani.

Mărimea și diversitatea speciilor pradă	Număr specii de pești Abundență specii de pești	Trebuie definită în termen de 2 ani	Trebuie introdus un program de monitorizare a populației de pradă, în termen de 2 ani.
Starea ecologică a apei pe baza indicatorilor fizico-chimici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Trebuie analizate și în corporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă din România, în termen de 1 an.
Starea ecologică a apei pe baza indicatorilor ecologici	Calificativ stare ecologică	Cel puțin stare ecologică bună	Trebuie analizate și în corporate datele din sistemul de monitorizare a stării ecologice a corpurilor de apă din România, în termen de 1 an.

1351 - *Phocoena phocoena* (Marsuin)

Marsuinul este o specie neritică, care pătrunde și în Dunăre și în lagune. În România populațiile sunt concentrate în apropierea coastei, unde hrana este mai abundentă și accesibilă. Uneori este capturat accidental în plase de calcan. La apropierea iernii migrează înspre zonele de iernare din Georgia și Turcia. În ROSCI0273 specia utilizează zona ca loc de pasaj și hrănire, fiind observate **5-20 de exemplare** pe parcursul sezoanelor primăvară, vară, toamnă în perioada 2007-2010. Specia utilizează atât zona de mal, cât și zona de larg, efectiv întreaga suprafață a sitului. Poate și observată și **în incintele porturilor**, uneori în dreptul porților de ecluzare din mare în canalele care fac legătura cu Dunărea. În urmărirea hranei nu ezită să pătrundă și în zonele poluate din incinta și raza porturilor sau a platformelor petroliere. Suprafața habitatului din sit este suficient de mare, dar calitatea habitatului este afectată de impactul generat de activități antropice. În Planul de management starea de conservare a speciei a fost evaluată ca fiind **nefavorabil - grav**. Obiectivul de conservare la nivel de sit pentru această specie este **îmbunătățirea stării de conservare**, definită prin următorii parametri și valori țintă:

Parametru	Unitate de măsură	Valoarea țintă	Informații suplimentare
Mărime populație	Număr indivizi	Cel puțin 20	În ROSCI0273 specia utilizează zona ca loc de pasaj și hrănire, fiind observate 5-20 de exemplare pe parcursul sezoanelor primăvară, vară, toamnă în perioada 2007-2010. Mărimea populației se poate estima prin numărare, foto-identificare, capturi accidentale și eșuări.
Tendința mărimii populației	Tendința unităților de reproducere	Stabilă sau în creștere	Pentru documentarea acestui parametru trebuie introdus un program de monitorizare a speciei în sit.
Structura populației	Structura pe vârste	Prezența tuturor generațiilor	Pe baza aprecierii vizuale în mod arbitrar, cu clase de vârstă: nou născut (N), pui (P), tânăr (T), adult (A). Exemplu: 12A2T1P1N - 12 adulți, 2 tânăr, 1 pui, 1 nou născut.

Suprafața habitatului	Ha	Cel puțin 4.900	Specia utilizează atât zona de mal, cât și zona de larg, efectiv întreaga suprafață a sitului. Poate și observată și în incintele porturilor, uneori în dreptul porților de ecluzare din mare în canalele care fac legătura cu Dunărea. 5 - ANANP decision no. 535 of 05.11.2021 regarding the approval of the Methodological Norms regarding the implementation of the conservation objectives from the Annex to Order no. 1197/2016 on the approval of the Management Plan and the Regulation of the Natura 2000 site ROSPA0076 Marea Neagra

**GUVERNUL ROMÂNIEI
MINISTERUL MEDIULUI, APELOR ȘI PĂDURILOR
AGENȚIA NAȚIONALĂ PENTRU ARII NATURALE PROTEJATE**

DECIZIE

Nr. 535 din 05.11.2020

privind aprobarea Normelor metodologice privind implementarea obiectivelor de conservare din Anexa la Ordinul Ministrului Mediului și Pădurilor nr. 1197/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSPA0076 Marea Neagră

Având în vedere:

- Hotărârea Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arii Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului;
- Legea nr. 95/2016 privind înființarea Agenției Naționale pentru Arii Naturale Protejate și pentru modificarea Ordonanței de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, cu modificările și completările ulterioare;
- Hotărârea nr. 867/2018 pentru modificarea și completarea Hotărârii Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arii Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1.705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului;
- Referatul Serviciului Monitorizare Arii Naturale Protejate, Relația cu Comunitățile Locale, Proceduri Certificare de Marcă, Parcuri, nr. 204/09.11.2020 privind aprobarea Normelor metodologice privind implementarea obiectivelor de conservare din Anexa la Ordinul Ministrului Mediului și Pădurilor nr. 1197/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 **ROSPA0076 Marea Neagră**;
- Ordinul Ministrului Mediului și Pădurilor nr. 1197/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSPA0076 Marea Neagră;

În conformitate cu prevederile:

- Ordonanței de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, aprobată cu modificări și completări prin Legea nr. 49/2011, cu modificările și completările ulterioare;

În temeiul:

- Articolelor 16 - 21 din Ordonanța de urgență a Guvernului nr. 57/2007 privind regimul ariilor naturale protejate, conservarea habitatelor naturale, a florei și faunei sălbatice, aprobată cu modificări și completări prin Legea nr. 49/2011, cu modificările și completările ulterioare;
- Legii nr. 220/2019 privind modificarea și completarea unor acte normative din domeniul protecției mediului;

- Art. 3 alin.(3) din Hotărârea Guvernului nr. 997/2016 privind organizarea și funcționarea Agenției Naționale pentru Arii Naturale Protejate și privind modificarea și completarea anexei nr. 12 la Hotărârea Guvernului nr. 1705/2006 pentru aprobarea inventarului centralizat al bunurilor din domeniul public al statului,

președintele Agenției Naționale pentru Arii Naturale Protejate emite prezenta:

DECIZIE

Art.1. Începând cu data prezentei decizii, se aprobă Normele metodologice privind implementarea obiectivelor de conservare pentru aria naturală protejată ROSPA0076 Marea Neagră din Anexa la Ordinul Ministrului Mediului și Pădurilor nr. 1197/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSPA0076 Marea Neagră .

Art.2. Aplicarea Normelor metodologice este responsabilitatea administratorilor ariilor naturale protejate care fac obiectul Ordinului Ministrului Mediului și Pădurilor nr. 1197/2016 privind aprobarea Planului de management și a Regulamentului sitului Natura 2000 ROSPA0076 Marea Neagră.

Art. 3. Prezenta decizie va fi comunicată personalului ANANP și administratorilor prevăzuți în art. 2 prin grija Serviciul Monitorizare Arie Naturale Protejate, Relația cu Comunitățile locale, Proceduri de Marcă, Parcuri.

Art. 4. Prezenta decizie are caracter obligatoriu și face obiectul evaluării anuale a activității.

Președinte,
Adi CROITORU

Obiective de conservare specifice pentru situl ROSPA0076 Marea Neagră

Situl Natura 2000 ROSPA0076 Marea Neagră se poziționează de-a lungul țărmului Mării Negre cu unele întreruperi în zonele cu desfășurare de activități economice, industriale și de transport și se învecinează cu teritoriul administrativ a două județe, și anume: Constanța și Tulcea.

Întinderea Sitului Natura 2000 ROSPA0076 Marea Neagră este spre est de linia de demarcare a țărmului în largul Mării Negre până la izobata de 22 de metri. Valoarea de suprapunere a sitului Natura 2000 ROSPA0076 Marea Neagră cu UAT-urile din zonă este 0. Tipul de utilizare a terenului din cadrul sitului Natura 2000, ROSPA0076 Marea Neagră, este unul singur, respectiv CLC 523 Zone marine, insule maritime.

ROSPA0076 Marea Neagră se suprapune cu rețeaua de SCI-uri marine: ROSCI0269 Vama Veche - 2 Mai, ROSCI0094 Izvoarele sulfuroase submarine de la Mangalia, ROSCI0197 Plaja submersă Eforie Nord - Eforie Sud, ROSCI0273 Zona marină de la Capul Tuzla, ROSCI0237 Structurile submarine metanogene de la Sfântu Gheorghe, ROSCI0066 Rezervația Biosferei Delta Dunării - zona marină, ROSCI0281 Cap Aurora și ROSCI0293 Costinești - 23 August.

În aria de protecție specială avifaunistică ROSPA0076 Marea Neagră sunt **18 specii din Anexa I a Directivei Păsări** care sunt strict protejate: A464 Puffinus yelkouan, A020 Pelecanus crispus, A177 Larus minutus, A191 Sterna sandvicensis, A396 Branta ruficollis, A197 Chlidonias niger, A189 Gelochelidon nilotica, A170 Phalaropus lobatus, A195 Sterna albifrons, A196 Chlidonias hybridus, A038 Cygnus Cygnus, A002 Gavia arctica, A001 Gavia stellata, A180 Larus genei, A176 Larus melanocephalus, A068 Mergus albellus, A190 Sterna caspia, A193 Sterna hirundo și **alte specii cu migrație regulată nemenționate în Anexa I a Directivei Păsări**, după cum urmează: A008 Podiceps nigricollis, A017 Phalacrocorax carbo, A061 Aythya fuligula, A125 Fulica atra, A050 Anas Penelope, A053 Anas platyrhynchos, A051 Anas strepera, A183 Larus fuscus, A179 Larus ridibundus, A070 Mergus merganser, A069 Mergus serrator, A005 Podiceps cristatus, A059 Aythya farina, A067 Bucephala clangula, A459 Larus cachinnans, A182 Larus canus, A006 Podiceps grisegena, A004 Tachybaptus ruficollis, A156 Limosa limosa.

În perioada de migrație situl găzduiește mai mult de 20.000 de exemplare de păsări de baltă, fiind un posibil candidat ca sit RAMSAR.

Aceste specii care au găsit habitate potrivite pentru hrănire, repaos, adăpost, reproducere și creșterea puilor, au stat la baza declarării sitului Sitului Natura 2000 ROSPA0076 Marea Neagră.

La elaborarea acestor obiective de conservare a diversității biologice, a habitatelor naturale, a florei și faunei sălbatice, de siguranță a populației și investițiilor din situl de importanță comunitară ROSPA0076 Marea Neagră, s-au avut în vedere valorile suprafețelor și datele oferite de Planul de management aprobat prin Ordin MMAP nr. 1643/2016, care însă pot fi actualizate pe măsură ce se vor efectua și alte cercetări.

• Specii de păsări enumerate în anexa I la Directiva Consiliului 2009/147/EC

A396 Branta ruficollis (gâsca cu gât roșu)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **200 - 300 indivizi în pasaj** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 250	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră.

Suprafața luciului de apă	ha	31100	Conform datelor din planul de management al ROSPA0076 Marea Neagră.
Suprafața habitatului de hrănire	ha	Specifică sitului	Conform datelor din planul de management al ROSPA0076 Marea Neagră. Conform ecologiei speciei acesta este format și din terenurilor agricole limitrofe luciului de apă.

A196 Chlidonias hybridus (chirighița cu obraz alb)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **4000 - 5000 indivizi în pasaj** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	indivizi	Cel puțin 4500	Populație nerezidentă de pasaj (care utilizează aria naturală protejată pentru odihnă și hrănire). Conform datelor din planul de management al ROSPA0076 Marea Neagră .
Suprafața habitatului de hrănire și odihnă	Ha	40500	Conform datelor din planul de management al ROSPA0076 Marea Neagră
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A197 Chlidonias niger (chirighița neagră)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **120-140 indivizi în pasaj** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr perechi	Cel puțin 130	Populație nerezidentă de pasaj (care utilizează aria naturală protejată pentru odihnă și hrănire). Conform datelor din planul de management al ROSPA0076 Marea Neagră .
Suprafața habitatului de hrănire și odihnă	Ha	95000	Conform datelor din planul de management al ROSPA0076 Marea Neagră

Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A038 *Cygnus cygnus* (lebedă de iarnă)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **1000-1500 indivizi la iernat** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației la iernat	Număr indivizi	Cel puțin 1250	Populație nerezidentă care utilizează aria naturală protejată pentru iernat. Conform datelor din planul de management al ROSPA0076 Marea Neagră. Specia găsește condiții bune de hrană și odihnă pe lacurile și terenurile agricole din sit pe timpul iernii.
Suprafața luciului de apă	ha	62200	Specia găsește condiții bune de hrană și odihnă pe lacurile și terenurile agricole din sit pe timpul iernii. Conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	3251	Specia găsește condiții bune de hrană și odihnă în zona marină, estuare și lagune, dar și pe terenurile agricole din vecinătatea sitului. Conform ecologiei speciei, aceasta se hrănește cu plante acvatice (inclusiv submerse) și palustre, iarbă și plante agricole (inclusiv semințe), în special iarna.

A002 *Gavia arctica* (cufundar polar)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **230-300 indivizi la iernat** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației la iernat	Număr indivizi	Cel puțin 265	Populație nerezidentă care utilizează aria naturală protejată pentru iernat. Conform

			datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	105100	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A001 *Gavia stellata* (cufundar mic)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **100-200 indivizi la iernat** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației la iernat	Număr indivizi	Cel puțin 150	Populație nerezidentă care utilizează aria naturală protejată pentru iernat. Conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	113600	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A189 Gelochelidon nilotica (pescăriță răzătoare)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **320-350 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 335	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	55800	Date estimate pe baza extrapolării și/sau modelării datelor obținute prin măsurători parțiale, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A180 Larus genei (pescăruș rozalb)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **1000-1500 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 1250	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	43100	Date estimate pe baza extrapolării și/sau modelării datelor obținute prin măsurători parțiale, conform datelor din planul de management al ROSPA0076 Marea Neagră.

Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanți organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A176 *Larus melanocephalus* (pescăruș cu cap negru)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **12000-15000 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 13500	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	107300	Date estimate pe baza extrapolării și/sau modelării datelor obținute prin măsurători parțiale, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A177 *Larus minutus* (pescăruș mic)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **10000-12000 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 11000	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră

			pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	102900	Date estimate pe baza extrapolării și/sau modelării datelor obținute prin măsurători parțiale, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A068 Mergus albellus (ferăstrăș mic)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **1000-1500 indivizi la iernat**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației la iernat	Număr indivizi	Cel puțin 1250	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	58900	Suprafața adecvata a habitatului a fost estimata pe baza cerintelor speciei, utilizand metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A020 Pelecanus crispus (pelican creț)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **70-120 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 95	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	80400	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A170 Phalaropus lobatus (notatiță)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **700-1200 indivizi în pasaj** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 950	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Suprafața habitatului de hrănire și odihnă	ha	25000	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS. Conform datelor din planul de management al ROSPA0076 Marea Neagră.

Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanți organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A464 Puffinus yelkouan (ielcovan estic)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **10000-17000 indivizi în pasaj** conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 13500	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Suprafața habitatului de hrănire și odihnă	ha	1500	Estuare și lagune, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A195 Sterna albifrons (chiră mică)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **300-500 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 400	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire,

			conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	26300	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A190 Sterna caspia (pescărița mare)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **500-1000 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 750	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	92400	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A193 Sterna hirundo (chiră de baltă)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **8000-10000 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 9000	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	131900	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.
Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanti organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

A191 Sterna sandvicensis (chira de mare)

Prezența acestei specii în ROSPA0076 Marea Neagră este de **5200-6000 indivizi în pasaj**, conform datelor din planul de management. Starea de conservare a speciei este **favorabilă**. Obiectivul de conservare specific sitului pentru această specie este **menținerea stării de conservare** și este definit de următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj	Număr indivizi	Cel puțin 5600	Populație aflată în pasaj care utilizează Situl Natura 2000 ROSPA0076 Marea Neagră pentru odihnă și/sau hrănire, conform datelor din planul de management al ROSPA0076 Marea Neagră
Suprafața habitatului de hrănire și odihnă	ha	92800	Suprafața adecvată a habitatului a fost estimată pe baza cerințelor speciei, utilizând metodologia GIS, conform datelor din planul de management al ROSPA0076 Marea Neagră.

Calitatea apei pe baza indicatorilor fizico-chimici (regimul de oxigen, nutrienți, salinitate, metale, micro-poluanți organici și inorganici)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)
Calitatea apei pe baza indicatorilor ecologici (macronevertebrate, fitobentos, fitoplancton)	Clasa de calitate a apei	Cel puțin clasa de calitate 2 pentru toți indicatorii	Conform parametrilor folosiți în Sistemul de Monitoring Integrat al Apelor din România (SMIAR)

• **Specii de păsări cu migrație regulată nemenționate în anexa I la Directiva Consiliului 2009/147/EC**

Aceste specii sunt asociate cu habitate acvatice și litorale. Nu sunt disponibile date despre mărimea populației și starea lor de conservare. Obiectivul de conservare specific sitului pentru aceste specii este **menținerea sau îmbunătățirea stării de conservare**, conform rezultatelor investigațiilor care vizează clarificarea stării de conservare în termen de 3 ani și este definit prin următorii parametri și valori țintă:

Parametru	Unitatea de măsură	Valoare țintă	Informații suplimentare
Mărimea populației de pasaj A050 <i>Anas penelope</i> A053 <i>Anas platyrhynchos</i> (A705) A051 <i>Anas strepera</i> (A703) A059 <i>Aythya ferina</i> A061 <i>Aythya fuligula</i> A067 <i>Bucephala clangula</i> A125 <i>Fulica atra</i> (A723) A156 <i>Limosa limosa</i> (A614-B) A070 <i>Mergus merganser</i> (A654-A) A069 <i>Mergus serrator</i> A017 <i>Phalacrocorax carbo</i> (A391) A005 <i>Podiceps cristatus</i> (A691) A006 <i>Podiceps grisegena</i> A008 <i>Podiceps nigricollis</i> (A692) A004 <i>Tachybaptus ruficollis</i> (A690)	Număr indivizi	Trebuie definit în termen de 3 ani	Nu sunt disponibile date despre mărimea populației speciilor. Trebuie evaluată în termen de 3 ani și, în funcție de starea de conservare a acestora, definită valoarea țintă.
Suprafața habitatelor de hrănire și odihnă.	Ha	58900	Sunt disponibile informații descriptive conform cărora există suprafețe relativ mari de zone umede puțin adânci și litorale. Acestea trebuie cartate detaliat în termen de 3 ani. Conform datelor din planul de management al ROSPA0076 Marea Neagră.

10	ZONA DEPOZITARE SOL VEGETAL VEGETAL SOIL AREA	S = 6120mp/sqm

NOTE / NOTES:

- TOATE SUPRAFETELE IMPREJMUIE CU GARD DE PROTECTIE, ZONA ASAMBLARE CONDUCTA, ZONA DEPOZITARE TEVI SI DRUMURILE DE ORGANIZARE DE SANTIER VOR FI ACOPERITE CU PIATRA SPARTA. ALL THE SURFACES INSIDE FENCED AREAS, STRINGING YARD, PIPE STORAGE AREA AND SITE WORKS ORGANIZATION ROADS WILL BE COVERED WITH CRUSHED GRAVEL.
- TRECERE TEMPORARA LA NIVEL CU CALEA FERATA SE VA REALIZA CONFORM PROIECTULUI DE SPECIALITATE. THE TEMPORARY ROAD RAILWAY CROSSING WILL BE BUILT ACCORDING WITH SPECIALITY PROJECT.
- CONFORM LEGISLATIEI ROMANESTI, VIRGULA SI PUNCTUL SUNT UTILIZATE INVERS, PENTRU DEFINIREA ZECIMALELOR. DIMENSIUNILE IN SISTEM US AU FOST DEFINITE ASTFEL: SIMBOLUL VIRGULA A FOST FOLOSIT PENTRU SEPARAREA CIFRELOR DIN INTERIORUL NUMERELOR CARE DEFINESC SUTE, MI SAU ZECI IN FUNCTIE DE CAZ. SUBUNITATILE DE MASURA (ZECIMALELE) AU FOST SEPARATE PRIN PUNCT. CONFORM REGULILOR DIN ROMANIA VIRGULA SI PUNCTUL SUNT FOLOSITE INVERS PENTRU DEFINIREA ZECIMALELOR INTR-UN NUMAR. DIN ACEST MOTIV TOATE CIFRELE AFLATE DUPEA PUNCT INTR-UN NUMAR VOR FI CITITE CA ZECIMALE. ACCORDING TO THE ROMANIAN LEGISLATION, THE COMMA AND THE POINT ARE USED IN REVERSE. FOR THE DEFINITION OF DECIMALS. THE DIMENSIONS IN THE US SYSTEM HAVE BEEN DEFINED AS FOLLOWS. THE COMMA SYMBOL HAS BEEN USED TO SEPARATE DIGIT INSIDE THE NUMBERS WHEN THE DIGIT DEFINE HUNDREDS, THOUSANDS, OR TENS DEPENDING ON THE CASE. THE DIGIT OF DECIMALS ARE SEPARATED BY A POINT. IN ACCORDING WITH THE RULES IN ROMANIA THE COMA AND POINT ARE USE IN OPPOSITE WAY FOR DEFINED THE DIGIT INSIDE OF NUMBER. FOR THIS REASON ALL THE DIGIT INSIDE OF NUMBER AFTER POINT WILL BE READ LIKE DECIMALS.
- PLANSĂ ESTE ÎNTOCMITĂ ÎN SISTEMUL DE COORDONATE STEREO 70. COORDONATELE WGS 84 AU FOST OBTINUTE PRIN CONVERSIE, FOLOSIND METODE ELECTRONICE DE CALCUL SI PARAMETRI SPECIFICI. CONVERSIA PRESUPUNE TRANSFORMARI (TRANSLATARI, ROTIRI SI / SAU SCALARI) ALE COORDONATELOR STEREO 70. DEFINITORI SUNT DOCUMENTELE REALIZATE ÎN SISTEMUL STEREO 70. ACESTE A VOR FI UTILIZATE ÎN SCOPUL PUNERII ÎN OPERĂ A PROIECTULUI. DOCUMENTELE EMISE ÎN SISTEMUL WGS 84 REPREZINTĂ RĂSPUNSUL LA UNELE CERINTE ALE AUTORITĂȚILOR SI LEGISLATIEI ROMANESTI. THE PLAN IS PREPARED IN STEREO 70 COORDINATE SYSTEM. THE WGS 84 COORDINATES WERE OBTAINED BY CONVERSION, USING ELECTRONIC CALCULATION METHODS AND SPECIFIC PARAMETERS. THE CONVERSION INVOLVES TRANSFORMATIONS (TRANSLATION, ROTATIONS AND / OR SCALING) OF THE STEREO 70 COORDINATES. THE DEFINING ARE THE DOCUMENTS MADE IN THE STEREO 70 SYSTEM. THESE WILL BE USED FOR THE PURPOSE OF IMPLEMENTING THE PROJECT. THE DOCUMENTS ISSUED IN THE WGS 84 SYSTEM REPRESENT THE ANSWER TO THE SOME REQUIREMENTS OF THE ROMANIAN AUTHORITIES AND LEGISLATION.

Conform legislatiei romanesti, virgula si punctul sunt utilizate invers, pentru definirea zecimalelor.
Dimensiunile in sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci in functie de caz. Subunitatile de masura (zecimalele) au fost separate prin punct. Conform regulilor din Romania virgula si punctul sunt folosite invers pentru definirea zecimalelor intr-un numar. Din acest motiv toate cifrele aliate dupa punct intr-un numar vor fi citite ca zecimale.

According to the Romanian legislation, the comma and the point are used in reverse, for the definition of decimals.
The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digit inside the numbers when the digit define hundreds, thousands or tens depending on the case. The digit of decimals are separated by a point. In according with the rules in Romania the comma and point are use in opposite way for defined the digit inside of number. For this reason all the digit inside of number after point will be read like decimals.

1. Data nu se precizeaza altfel, toate dimensiunile sunt exprimate in metri.		1. All dimensions are in meters, unless noted otherwise.	
2. Toate cotele de nivel sunt in metri, relativi la nivelul marii.		2. All elevations are in meters, relative to MSL.	
3. Datele bathimetrice provin din baza de date geotehnice si geofizice GIS actualizata in 2004, document Figuro 31305-R-00103) actualizat pentru proiectul Neptun Deep.		3. Bathymetry data from 2004 geotechnical and geophysical GIS database update, figure 31305-R-00103) for Neptun Deep development.	
4. Lungimea tractiunii subtraversarii ramului in lungul axului central e 650m.		4. Length of the trenchless shore crossing trajectory along center line- 890m.	
5. Santul va fi pre-dragat de la punctul de iesire din tunel pana la cota de nivel -20m in conformitate cu specificatiile din ROND-EW-YSPDS-59-071. Pentru detalii santului si ale caminului de iesire se vor consulta plansele ROND-EW-YOLAY-22-0007 si ROND-EW-YODET-25-0001.		5. The trench section is to be pre-dredged from the tunnel exit point to the 20m depth contour in accordance with Specification ROND-EW-YSPDS-59-071. For details of the trench and the exit pier refer to drawings ROND-EW-YOLAY-22-0007 & ROND-EW-YODET-25-0001.	
6. Traseul de gaze naturale de 30" si conducta de protectie pentru fibra optica vor fi instalate de catre contractorul EPC-2 in conformitate cu specificatiile din ROND-EW-YSPDS-30-0704. Oportunitate de montaj sunt:		6. The 30" production pipeline and conduit for the FOC are to be installed by EPC-2 contractor in accordance with Specification ROND-EW-YSPDS-30-0704. The pipeline installation options are:	
• Tragearea conductei de pe o barja afloata acolo unde apa are o adancime de 20m utilizand un troliu marit pe tami la punctul de intrare in tunel.		• Pull pipe from an anchored offshore barge using an onshore winch located at the tunnel entry point.	
• Tragearea conductei pe tarm utilizand o barja marina ancorata acolo unde adancimea apei este intre 15-20m. Insiirarea conductei va fi executata de pe tarm.		• Pull pipe from the shoreline using a winch located on an anchored offshore winch barge. Pipe string fabricated on shore.	
• Impingerea /tragera conductei de pe tarm utilizand un sistem combinat alcatuit din propulsor (data este optiunea "Direct Pipe") si o barja troliu marina care sa produca tensiunea.		• Push/pull pipe from shore using a combined system comprising of the pipe thruster (if Direct Pipe) and an offshore winch barge providing tension.	
Pentru toate optiunile, capul de tragera va fi abandonat intr-o caseda la o adancime a apei de 20m, pentru recuperarea de catre vapornul de lansare EPC1.		For the basic case the pull head is to be abandoned in a target box at the 20m water depth contour for retrieval by the EPC1 pipeline vessel.	
7. Traseul de conducta o fi testat hidraulic conform specificatiilor din ROND-EW-YSPDS-20-0001 si 0007.		7. The pipe string shall be hydrotested after installation in accordance with Specification ROND-EW-YSPDS-20-0001 & -0007.	
8. Fila optica va fi montata in conducta ei de protectie in accesi sant cu conducta in intranzonul -sa pana la o adancime de 20m.		8. FOC to be installed into conduit pipe in same trench as the pipeline extending to 20m water depth.	
9. ITT = Zona sant tranziție		9. ITT= Trench Transition Zone	
10. Santul va fi sces de la nivelul fundului marii pe o distanta de 300m.		10. The trench will transition from seabed level over a distance of 300m. Starting at FSL 152.400 and ending at FSL 152.700.	
11. O optiune, conexiunea intru EPC-2 si EPC-1 poate fi executata ca o conexiune desuapra apei la o adancime a apei 5m-20m (de la nivelul marii).		11. As an option tie-in between EPC-2 and EPC-1 can be made by above water tie-in between 5m-20m (MSL) water depth.

NOTA / NOTE:

Planşa este întocmită în sistemul de coordonate WGS 84. Coordonatele STEREO 70 au fost obținute prin conversie, folosind metode electronice de calcul și parametri specifici. Conversia presupune transformări (translații, rotații și/sau scalări) ale coordonatelor WGS 84. Definiții sunt documentele realizate în sistemul WGS 84. Acestea vor fi utilizate în scopul punerii în opera a procedurii. Documentele emise în sistemul STEREO 70 reprezintă răspunsul la cerințele autorităților și legislației românești.

The plan is prepared in WGS 84 coordinate system. The STEREO 70 coordinates were obtained by conversion, using electronic calculation methods and specific parameters. The conversion involves transformations (translations, rotations and/or scaling) of the WGS 84 coordinates.

The defining are the documents made in the WGS 84 system. These will be used for the purpose of implementing the project. The documents issued in the STEREO 70 system represent the answer to the requirements of the Romanian authorities and legislation.

Conform legislației românești, virgula și punctul sunt utilizate învers, pentru definirea zecimalelor.

Dimensiunile în sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci în funcție de caz. Subunitățile de măsură (zeci, mii) au fost separate prin punct. Prin urmare, zecimalele vor fi citite din interiorul numerelor aliate după simbolul punct.

According to the Romanian legislation, the comma and the point are used in reverse, for the definition of decimals.

The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digits inside the numbers when the digits define hundreds, thousands or tens depending on the case. The digits between the comma and the point are used to separate the digits inside the number. For this reason all the digits inside of number after point will be read like decimals.

SE AFIȘĂZĂ PROIECTUL PRIN CONVENȚIA ÎN CAZUL ÎN CARE CONTRACTUL DE CONCESIUNE NEPTUN DEEP 2-A CONTRACTUL DE OPERAȚIUNI COMINE AFFERT SI SAU CONTRACTUL DE CONFIDENTIALITATE AFICABLE IN NUMELE EXONMORIL EXPLORATION AND PRODUCTION ROMANIA LIMITED.

NOTA / NOTE:

The plan is prepared in WGS 84 coordinate system. The STEREO 70 coordinates were obtained by conversion, using electronic calculation methods and specific parameters. The conversion involves transformations (translations, rotations and/or scaling) of the WGS 84 coordinates.

DATE TECHNIC / ENGINEERING DATA

ACRONIME
 PTP - PUNCT SCHIMBARE DIRECTIE
 KP - POZITIE KILOMETRICA (CONDUCTA)

ACRONYMS

KP - KILOMETRIC POINT
IP - INFLEXION POINT

Conform legislației românești, virgula și punctul sunt utilizate invers, pentru definirea zecimalelor.

Dimensiunile în sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci în funcție de mărimea subunității de măsură (zecimalele) au fost separate prin punct. Prin urmare zecimalele vor fi cifrele din interiorul numerelor alinate după simbolul punct.

According to the Romanian legislation, the comma and the point are used in reverse, for the definition of decimals.

The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digit inside the numbers when the digit define hundreds, thousands or tens depending on the case. The digit of decimals are separated by a point. In according with the rules in Romania the coma and point are use in opposite way for defined the digit inside of number. For this reason all the digit inside of number after point will be read like decimals.

CTZ - ZONA TRANSFER CURENT

ACRONYMS
CTZ - CURRENT TRANSFER ZONE

CONTINUARE NOTE

7. DISTANTA MINIMA REALA DINTRE NAVA DE MONTAJ A CONDUCTEI SI SUPORTUL STRUCTURAL SAU SUPRASTRUCTURA, VA FI DETERMINATA DE CONTRACTORUL DE INSTALARE, IAR RUTELE CONDUCTEI DE GAZE NATURALE SI/SAU CONDUCTEI DE ADUCTIUNE SI CONFIGURATIA MOSOARELOR DE CONECTARE VOR FI REVIZUITE CORESPUNZATOR.

8. DISTANTA MINIMA DE 100m INTRE SISTEMUL OMBILICAL DOMINO SI CABLUL INCALZIRII DIRECTE ESTE PRESUPUSA: TOLERANTELE VOR FI CALCULATE CONFORM DOC. ROND-EW-YRRPT-21-0047.

9. ACTUALELE RAZE PRELIMINARE ALE TUBULUI FLEXIBIL SI AL CABLURILOR SUNT BAZATE PE PRIMA CONEXIUNE. CONTRACTORUL EPC POATE MODIFICA PRESUPUNERILE ACTUALE.

10. TUBURILE - J SI SI RISER-ELE SUPORTULUI STRUCTURAL SI ALE SUPRASTRUCTURII ACTUALIZATE CONFORM PLANSA ROND-EW-NDWG-30-0170.

11. ZONA INTERZISA DE 500m DIN ZONA DE SIGURANTA A PLATFORMEI PENTRU PESCUIT/TRAULARE.

12. ZONA DE EXCLUDERE 6m x 6m VA FI UTILIZATA PENTRU PLASAREA IN VIITOR A SANIEI ANODULUI.

13. SALTELELE DE BETON FLEXIBILE VOR FI AMPLASATE CA FUNDATIE SUB LUNGIMEA ZONEI DE TRANSFER CURENT (APROX. 60m). SALTELELE VOR AVEA DIMENSIUNILE 6m x 3m x 0.15m, UN TOTAL DE APROXIMATIV 20 BUC SUNT NECESARE PENTRU UN STRAT. VA FI FINALIZAT IN PROIECTUL DETALIAT.

NOTES CONT'D

7. ACTUAL MINIMUM SEPARATION BETWEEN THE PIPELINE INSTALLATION VESSEL AND THE JACKET OR TOPSIDE TO BE DETERMINED BY INSTALLATION CONTRACTOR, AND THE PIPELINE AND / OR FLOWLINE ROUTES AND TIE-IN SPOOLS CONFIGURATION TO BE REVISED ACCORDINGLY.

8. MINIMUM DISTANCE OF 100m BETWEEN DOMINO UMBILICAL AND DEH CABLE IS ASSUMED, TOLERANCES TO BE CONSIDERED SEE DOCUMENT ROND-EW-YRRPT-21-0047.

9. CURRENT PRELIMINARY RADIUS OF FLEXIBLES AND CABLES IS BASED ON FIRST CONNECTION. EPC MAY MODIFY THE CURRENT ASSUMPTION.

10. JACKET TOPSIDE J-TUBE AND RISERS UPDATED BASED ON DRAWING ROND-EW-NDWG-30-0170.

11. 500m PLATFORM SAFETY ZONE RESTRICTED AREA APPLIES FOR FISHING/TRAULIN ACTIVITY.

12. 6m x 6m EXCLUSION ZONE TO BE USED FOR FUTURE PLACEMENT OF ANODE SLED.

13. CONCRETE FLEXIBLE MATTRESSES TO BE PLACED AS A FOUNDATION UNDER THE LENGTH OF THE CTZ (APPROX. 60m). MATTRESSES ARE TO BE 6m x 3m x 0.15m, A TOTAL OF APPROXIMATELY 20 ARE REQUIRED ON ONE LAYER. TO BE FINALIZED DURING DETAILED DESIGN.

NOTA / NOTE:

Planşa este întocmită în sistemul de coordonate WGS 84. Coordonatele STEREO 70 au fost obţinute prin conversie, folosind metode electronice de calcul şi parametri specifici. Conversia presupune transformări (translaţii, rotaţii şi/sau scalări) ale coordonatelor WGS 84. Definiţiilor sunt documentele realizate în sistemul WGS 84. Acestea vor fi utilizate în scopul punerii în opera a proiectului. Documentele emise în sistemul STEREO 70 reprezintă răspunsul la cerinţele autorităţilor şi legislaţiei româneşti.

The plan is prepared in WGS 84 coordinate system. The STEREO 70 coordinates were obtained by conversion, using electronic calculation methods and specific parameters. The conversion involves transformations (translations, rotations and/or scaling) of the WGS 84 coordinates. The defining are the documents made in the WGS 84 system. These will be used for the purpose of implementing the project. The documents issued in the STEREO 70 system represent the answer to the requirements of the Romanian authorities and legislation.

NOTA / NOTE:

Planșa este întocmită în sistemul de coordonate WGS 84. Coordonatele STEREO 70 au fost obținute prin conversie, folosind metode electronice de calcul și parametri specifici. Conversia presupune transformări (translații, rotații și/sau scalări) ale coordonatelor WGS 84. Definițiile sunt documentele realizate în sistemul WGS 84. Acestea vor fi utilizate în scopul punerii în opera a proiectului. Documentele emise în sistemul STEREO 70 reprezintă răspunsul la cerințele autorităților și legislației românești.

The plan is prepared in WGS 84 coordinate system. The STEREO 70 coordinates were obtained by conversion, using electronic calculation methods and specific parameters. The conversion involves transformations (translations, rotations and/or scaling) of the WGS 84 coordinates. The defining are the documents made in the WGS 84 system. These will be used for the purpose of implementing the project. The documents issued in the STEREO 70 system represent the answer to the requirements of the Romanian authorities and legislation.

Conform regulilor din România, virgula și punctul sunt folosite invers pentru definirea zecimalelor. Prin urmare cifrele componente ale unui număr separate prin punct vor fi citite ca zecimale.

Dimensiunile în sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci în funcție de caz. Subunitățile de măsură (zecimalele) au fost separate prin punct. Prin urmare zecimalele vor fi cifrele din interiorul numerelor aflate după simbolul punct.

According to the Romanian legislation the comma and the point are used in reverse, for the definition of decimals, therefore the component digits of a number separated by a dot will be read as decimals

The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digit inside the numbers when the digit define hundreds, thousands or tens depending on the case. The digit of decimals are separated by a point. In according with the rules in Romania the coma and point are use in opposite way for defined the digit inside of number. For this reason all the digit inside of number after point will be read like decimals.

Conform legislatiei romanesti, virgula si punctul sunt utilizate invers, pentru definirea zecimalelor. Dimensiunile in sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci in functie de caz. Subunitatile de masura (zecimalele) au fost separate prin punct. Conform regulilor din Romania virgula si punctul sunt folosite invers pentru definirea zecimalelor intr-un numar. Din acest motiv toate cifrele aflate dupa punct intr-un numar vor fi citite ca zecimale.

According to the Romanian legislation, the comma and the point are used in reverse, for the definition of decimals.

The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digit inside the numbers when the digit define hundreds, thousands or tens depending on the case. The digit of decimals are separated by a point. In according with the rules in Romania the coma and point are use in opposite way for defined the digit inside of number. For this reason all the digit inside of number after point will be read like decimals.

NOTE / NOTES

Conform legislației românești, virgula și punctul sunt utilizate invers, pentru definirea zecimalelor.

Dimensiunile în sistem US au fost definite astfel: Simbolul virgula a fost folosit pentru separarea cifrelor din interiorul numerelor care definesc sute, mii sau zeci în funcție de caz. Subunitățile de măsură (zecimalele) au fost separate prin punct. Conform regulilor din România virgula și punctul sunt folosite invers pentru definirea zecimalelor într-un număr. Din acest motiv toate cifrele aflate după punct într-un număr vor fi citite ca zecimale.

According to the Romanian legislation, the comma and the point are used in reverse, for the definition of decimals.

The dimensions in the US system have been defined as follows: The comma symbol has been used to separate digit inside the numbers when the digit define hundreds, thousands or tens depending on the case. The digit of decimals are separated by a point. In accordance with the rules in Romania the comma and point are used in opposite way for defined the digit inside of number. For this reason all the digit inside of number after point will be read like decimals.

22	Hazardous components from electrical & electronic equipment (toners, cartridges)	Hazardous components removed from scrap equipment	16 02 15*	Hazardous	0.03	Solid	0.003	Bulk Covered	Send to approved/permitted facility

Appendix G. Lists and quantities of estimated waste generated during drilling phase

No.	Waste name	Waste Category	Waste Code	Hazardous/ Non-hazardous	Total estimated quantities generated during drilling (Mt)	Waste Form	Estimated quantities temporary stored on site (Mt) (10% during drilling)	Methods of storage	Methods of disposal/recovery
23	Electric and electronic equipment	Components removed from scrap equipment other than those mentioned in 16 02 15	16 02 16	Non-Hazardous	0.22	Solid	0.022	Bulk Covered	Send to approved/permitted facility
24	Methanol	Inorganic wastes containing dangerous substances	16 03 03*	Hazardous	62.92	Liquid	6.292	Metallic drums	Licensed disposal facility (onshore)
25	Acid batteries, dry cell batteries	Lead acid batteries	16 06 01*	Hazardous	0.72	Solid	0.072	Bulk Covered	Send to approved/permitted facility
26	Alkaline batteries	Alkaline batteries (except 16 06 03)	16 06 04	Non-Hazardous	0.67	Solid	0.067	Bulk Covered	Send to approved/permitted facility
27	Oily Waters - Slops containing used drilling fluids (NAF), cement spacer, chemical additives, wash water	Aqueous liquid wastes containing dangerous substances	16 10 01*	Hazardous	373.33	Liquid	37.333	Bulk Covered	Thermal treatment (onshore)
28	Oil contaminated completion fluids	Aqueous liquid wastes containing dangerous substances	16 10 01*	Hazardous	20.00	Liquid	2.000	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
29	Oily sediments (soil mixed with oil)	Soil and gravel with hazardous substances content	17 05 03*	Hazardous	0.17	Solid	0.017	Plastic container	Thermal treatment (onshore)
30	Medical waste	Wastes whose collection and disposal are subject to special measures to prevent infection	18 01 03*	Hazardous	0.007	Solid	0.001	Metallic drums	Thermal treatment (onshore)
31	Recyclable domestic trash - Glass	Glass	20 01 02	Non-Hazardous	2.38	Solid	0.238	Plastic container	Recycle (if feasible)/Landfill
32	Cooking oil	Edible oils and fats	20 01 25	Non-Hazardous	0.73	Liquid	0.073	Metallic drums	Thermal Treatment (onshore)
33	Electric and electronic equipment	Scrap electrical and electronic equipment, other than specified on 20 01 21, 20 01 23 and 20 01 35	20 01 36	Non-Hazardous	0.83	Solid	0.083	Big bags	Licensed disposal facility (onshore)
34	Scrap metal	Metals	20 01 40	Non-Hazardous	143.69	Solid	14.369	Bulk Uncovered	Recycle (if feasible)/Landfill
35	Household Waste	Mixed municipal waste	20 03 01	Non-Hazardous	136.14	Solid	13.614	Plastic container	Landfill

Appendix G. List of estimated waste

2 – List and estimated quantities of waste generated during construction/installation phase

Appendix G. Lists and quantities of estimated waste generated during construction/installation phase

No.	Waste name	Waste Category	Waste Code	Hazardous/ Non-hazardous	Total estimated quantities to be generated during construction/ installation (Mt)	Waste Form	Estimated quantities temporary stored (10% during construction/installation) on site (Mt)	Methods of storage	Methods of disposal/recovery
1	Bulk Solids (Uncontaminated) - Barite	Other wastes not otherwise specified	01 05 99	Non-Hazardous	167.83	Solid	16.783	Bulk Covered	Landfill
2	Bulk Solids (Uncontaminated) - Cement	Other wastes containing dangerous substances	11 01 98*	Hazardous					
3	Bulk Solids (Uncontaminated) - Blast Media	Wastes from sandblasting materials other than those mentioned in 12 01 16	12 01 17	Non-Hazardous					
4	Bulk Solids (Uncontaminated) - Desiccant, Silica	Other wastes not otherwise specified	01 05 99	Non-Hazardous					
5	Potentially contaminated sediments from reservoirs	Sludges from tanks	05 01 03*	Hazardous	0.33	Solid	0.033	Metal container	Send to approved/permitted facility
6	Paint waste	Waste paints and varnishes containing organic solvents or other dangerous substances	08 01 11*	Hazardous	6.67	Liquid	0.667	Metal container	Thermal treatment (onshore)
7	Used lube oil/motor oil	Unchlorinated mineral oils for engine, transmission, and lubrication	13 02 05*	Hazardous	8.33	Liquid	0.833	Plastic container	Thermal treatment (onshore)/Recycle (when practicable)
8	Oil sludge/Tank bottom sludge	Sludges from oil / water separators	13 05 02*	Hazardous	38.33	Liquid	3.833	Plastic container	Thermal treatment (onshore)
9	Contaminated hydrocarbons (contaminated crude, diesel, etc.)	Other fuels (including mixtures)	13 07 03*	Hazardous	25.00	Liquid	2.500	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
10	Waste paper and cardboard packaging	Paper and cardboard packaging	15 01 01	Non-Hazardous	39.17	Solid	3.917	Plastic container	Recycle (if feasible)/Landfill
11	Waste Wood	Wooden packaging	15 01 03	Non-Hazardous	186.00	Solid	18.600	Plastic container	Recycle (if feasible)/Landfill
12	Drums from caustic solutions, solvents; empty pipe dope containers, chemical sacks, cans of dried paint	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	1.17	Solid	0.117	Bulk Covered	Thermal treatment (onshore)
13	Contaminated drums, containers, packaging (metal)	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	10.00	Solid	1.000	Bulk Covered	Rinse - Recycle
14	Contaminated drums, containers, packaging (plastic)	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	85.00	Solid	8.500	Bulk Covered	Rinse - Landfill
15	Dry Filters	Absorbents, filter materials, polishes, and protective clothing, other than those specified in 15 02 02	15 02 03	Non-Hazardous	4.17	Solid	0.417	Plastic container	Recycle (if feasible)/Landfill
16	Recyclable domestic trash - Plastic	Plastic packaging	15 01 02	Non-Hazardous	22.17	Solid	2.217	Plastic container	Recycle (if feasible)/Landfill
17	Recyclable domestic trash - Glass	Glass	20 01 02	Non-Hazardous					
18	Recyclable domestic trash - Metal	Metal packaging	15 01 04	Non-Hazardous					
19	Oily Debris - Oil spill clean-up waste, chemical spill clean-up waste, and PPEs; rags, contaminated absorbers	Absorbents, filter materials (including oil filters not otherwise specified), polishing materials, protective clothing contaminated with dangerous substances	15 02 02*	Hazardous	51.67	Solid	5.167	Plastic container	Thermal treatment (onshore)
20	Oily Debris - Oily sediments (soil mixed with oil)	Soil and stones containing dangerous substances	17 05 03*	Hazardous					
21	Oily Debris - Oily filters	Oil filters	16 01 07*	Hazardous					
22	Glycol	Antifreeze fluids, other than those specified in 16 01 14	16 01 15	Non-Hazardous	4.17	Liquid	0.417	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
23	Alkaline batteries	Alkaline batteries (except 16 06 03)	16 06 04	Non-Hazardous	15.00	Solid	1.500	Bulk Covered	Send to approved/permitted facility
24	Lead Acid batteries	Lead acid batteries	16 06 01*	Hazardous					
25	Mercury batteries	Mercury-containing batteries	16 06 03*	Hazardous					
26	Nickel-Cadmium batteries	Ni-Cd batteries	16 06 02*	Hazardous					
27	Hazardous components from electrical & electronic equipment	Hazardous components removed from scrap equipment	16 02 15*	Hazardous	1.67	Solid	0.167	Bulk Covered	Send to approved/permitted facility
28	Electrical/electronic waste	Components removed from scrap equipment other than those mentioned in 16 02 15	16 02 16	Non-Hazardous				Bulk Covered	

Appendix G. Lists and quantities of estimated waste generated during construction/installation phase

No.	Waste name	Waste Category	Waste Code	Hazardous/ Non-hazardous	Total estimated quantities generated to be during construction/ installation (Mt)	Waste Form	Estimated quantities temporary stored (10% during construction/installation) on site (Mt)	Methods of storage	Methods of disposal/recovery
29	Oily water	Aqueous liquid wastes containing dangerous substances	16 10 01*	Hazardous	13.33	Liquid	1.333	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
30	Vessel Tank Cleanout	Aqueous liquid wastes containing dangerous substances	16 10 01*	Hazardous	3531.67	Liquid	353.167	Metal container	WTT / Thermal Treatment (onshore)
31	Wash water	Aqueous liquid wastes containing dangerous substances	16 10 01*	Hazardous	26.67	Liquid	2.667	Metal container	WTT / Thermal Treatment (onshore)
32	Medical waste	Wastes whose collection and disposal are subject to special measures to prevent infection	18 01 03*	Hazardous	0.83	Solid	0.083	Plastic container	Thermal treatment (onshore)
33	Unused or contaminated solvents/chemicals	Solvents	20 01 13*	Hazardous	20.83	Liquid	2.083	Plastic/metal container/metal	WTT / Thermal Treatment (onshore)
34	Scrap metal	Metals	20 01 40	Non-Hazardous	164.50	Solid	16.450	Bulk Uncovered	Recycle (if feasible)/Landfill
35	Household Waste	Mixed municipal waste	20 03 01	Non-Hazardous	219.67	Solid	21.967	Plastic container	Landfill

Appendix G. List of estimated waste

3 – List and estimated quantities of waste generated during operation phase

Appendix G. Lists and quantities of estimated waste generated during operation phase

No.	Waste name	Waste Category	Waste Code	Hazardous/ Non-hazardous	Total estimated quantities generated during operation (Mt)	Waste Form	Estimated quantities temporary stored on site (Mt) (10% during operation)	Methods of storage	Methods of disposal/recovery
1	Bulk Solids (Uncontaminated) - Barite	Other wastes not otherwise specified	01 05 99	Non-Hazardous	4.87	Solid	0.487	Bulk Covered	Landfill
2	Bulk Solids (Uncontaminated) - Cement	Other wastes containing dangerous substances	11 01 98*	Hazardous					
3	Bulk Solids (Uncontaminated) - Blast Media	Wastes from sandblasting materials other than those mentioned in 12 01 16	12 01 17	Non-Hazardous					
4	Bulk Solids (Uncontaminated) - Desiccant, Silica	Other wastes not otherwise specified	01 05 99	Non-Hazardous					
5	Potentially Contaminated Reservoir Sediments	Sludges from tanks	05 01 03*	Hazardous	0.37	Solid	0.037	Metal container	Send to approved/permitted facility
6	Paint waste	Waste paints and varnishes containing organic solvents or other dangerous substances	08 01 11*	Hazardous	0.75	Liquid	0.075	Metal container	Thermal treatment (onshore)
7	Used lube oil/motor oil	Unchlorinated mineral oils for engine, transmission, and lubrication	13 02 05*	Hazardous	3.74	Liquid	0.374	Plastic container	Thermal treatment (onshore)/Recycle (when practicable)
8	Oil sludge/Tank bottom sludge	Sludges from oil / water separators	13 05 02*	Hazardous	7.49	Liquid	0.749	Plastic container	Thermal treatment (onshore)
9	Contaminated hydrocarbons (contaminated crude, diesel, etc.)	Other fuels (including mixtures)	13 07 03*	Hazardous	3.74	Liquid	0.374	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
10	Waste paper and cardboard	Paper and cardboard packaging	15 01 01	Non-Hazardous	29.19	Solid	2.919	Bulk Uncovered	Recycle (if feasible)/Landfill
11	Waste Wood	Wooden packaging	15 01 03	Non-Hazardous	17.22	Solid	1.722	Plastic container	Recycle (if feasible)/Landfill
12	Drums from caustic solutions, solvents; empty pipe dope containers, chemical sacks, cans of dried paint	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	0.75	Solid	0.075	Bulk Covered	Thermal treatment (onshore)
13	Contaminated drums, containers, packaging (metal)	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	7.49	Solid	0.749	Bulk Covered	Rinse - Recycle
14	Contaminated drums, containers, packaging (plastic)	Packaging containing residues or contaminated with dangerous substances	15 01 10*	Hazardous	7.49	Solid	0.749	Bulk Covered	Rinse - Landfill
15	Dry Filters	Absorbents, filter materials, polishes, and protective clothing, other than those specified in 15 02 02	15 02 03	Non-Hazardous	9.73	Solid	0.973	Plastic container	Recycle (if feasible)/Landfill
16	Recyclable domestic trash - Plastic	Plastic packaging	15 01 02	Non-Hazardous	11.23	Solid	1.123	Plastic container	Recycle (if feasible)/Landfill
17	Recyclable domestic trash - Glass	Glass	20 01 02	Non-Hazardous					
18	Recyclable domestic trash - Metal	Metal packaging	15 01 04	Non-Hazardous					
19	Oily Debris - Oil spill clean-up waste, chemical spill clean-up waste, PPEs, rags, contaminated absorbers	Absorbents, filter materials (including oil filters not otherwise specified), polishing materials, protective clothing contaminated with dangerous substances	15 02 02*	Hazardous	26.20	Solid	2.620	Plastic container	Thermal treatment (onshore)
20	Oily Debris - Oily sediments (soil mixed with oil)	Soil and gravel with hazardous substances content	17 05 03*	Hazardous					
21	Oily Debris - Oily filters	Oil filters	16 01 07*	Hazardous					
22	Glycol	Antifreeze fluids, other than those specified in 16 01 14	16 01 15	Non-Hazardous	7.49	Liquid	0.749	Metal container	Thermal treatment (onshore)/Recycle (when practicable)
23	Alkaline batteries	Alkaline batteries (except 16 06 03)	16 06 04	Non-Hazardous	11.23	Solid	1.123	Bulk Covered	Send to approved/permitted facility
24	Lead Acid batteries	Lead acid batteries	16 06 01*	Hazardous					
25	Mercury batteries	Mercury-containing batteries	16 06 03*	Hazardous					
26	Nickel-Cadmium batteries	Ni-Cd batteries	16 06 02*	Hazardous					
27	Hazardous components from electrical & electronic equipment	Hazardous components removed from scrap equipment	16 02 15*	Hazardous	0.75	Solid	0.075	Bulk Covered	Send to approved/permitted facility

S24 / 25 - Avoid contact with skin and eyes. S36 / 37/39 - Wear suitable protective equipment, gloves and eye / face protection
49	AQUALINEAR	Gelling Agent	Used for completion fluid - suspends the sand from the gravel package while being pumped into the well	cubic meter	48.07	48.89	61.11	22.52	14.30	20.07	14.67	11.56	43.41	20.52	H319 - Causes serious eye irritation Xi - Irritant. R36 Irritating to eyes.	P264 - Thoroughly wash face, hands and any exposed skin after handling P280 - Wear eye protection / face protection P305 + P351 + P338 - IN EYE CONTACT: Rinse cautiously with water for several minutes. Remove contact lenses, if present, and easy to do. Continue rinsing P337 + P313 - If eye irritation persists: Get medical attention / care
50	AVAPOLY PGL	Hydrate Inhibition	Used for completion fluid - prevents the formation of hydrate in the well	cubic meter	25.96	26.40	33.00	12.16	7.72	10.84	7.92	6.24	23.44	11.08	Not classified as dangerous according to Regulation (EU) No 1272/2008, Directive 67/548 / EEC (DPP), Directive 1999/45 / EC (DSP) and amendments, GD 1408/2008 and GD 937/2010 .	P261: Avoid inhaling dust / smoke / gas / mist / vapor / spray. P501: Dispose of contents / container in accordance with local regulations S23: Do not breathe dust / smoke / gas / mist / vapor / spray / steam. S24 / 25: Avoid contact with skin and eyes.
51	FR-66	Friction Reducer	Used for completion fluid - reduces friction between drilling or tubing column and tubing column	cubic meter	0.58	0.59	0.73	0.27	0.17	0.24	0.18	0.14	0.52	0.25	Xn - Harmful. Xi - Irritant. R36 Irritating to eyes. R65 Harmful: may cause lung damage if swallowed.	S26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S24 / 25 Avoid contact with skin and eyes.
52	HAI-303	Corrosion Inhibitor	Used for completion fluid - prevents corrosion of the tonnage column and tubing caused by hydrochloric acid	cubic meter	0.14	0.15	0.18	0.07	0.04	0.06	0.04	0.03	0.13	0.06	R20 / 21/22 Harmful by inhalation, in contact with skin and if swallowed. R39 / 23/24/25 Toxic: danger of very serious irreversible effects through inhalation, in contact with skin and if swallowed. R36 / 37/38 Irritating to eyes, respiratory system and skin.	S7 Keep container tightly closed. S16 Keep away from sources of ignition - No smoking. S26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S45 In case of accident or if you feel unwell, seek medical advice immediately. S36 / 37 Wear suitable protective clothing and gloves.
53	HCL 15%	Acid	Used for completion fluid	cubic meter	19.23	19.56	24.44	9.01	5.72	8.03	5.87	4.62	17.36	8.21	Xi - Irritant. R36 / 37/38 Irritating to eyes, respiratory system and skin. C - Corrosive. R34 Causes burns. R37 Irritating to respiratory system. H314 - Causes severe skin burns and eye damage. H335 - May cause respiratory irritation.	S26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S45 In case of accident or if you feel unwell, seek medical advice immediately. S1 / 2 Keep locked away from children. S36 / 37/39 Wear suitable protective clothing, gloves and eye / face protection.
54	METHANOL	Hydrate Inhibition	Used for completion fluid - dissolves hydrates in the fluid	cubic meter	12.11	12.32	15.40	5.67	3.60	5.06	3.70	2.91	10.94	5.17	H225 Highly flammable liquid and vapour. H331 Toxic if inhaled.	P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. P260 Do not breathe

															H311 Toxic in contact with skin. H301 Toxic if swallowed. H370 Causes damage to organs. EUH031 Contact with acids liberates toxic gas	dust/fume/gas/mist/vapours/spray. P301+P310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P302 + P352 IF ON SKIN: Wash with plenty of soap and water. P304 + P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. P405 Store locked up.
55	SODA ASH	pH Control	Used for completion fluid - neutralizes hydrochloric acid	metric ton	2.88	2.93	3.67	1.35	0.86	1.20	0.88	0.69	2.60	1.23	H 319: Causes serious eye irritation. Xi - Irritant. R 36: Irritating to eyes.	P264: Wash comes after use. P280: Wear protective gloves / protective clothing / protective equipment eye / face protection. P337 + P313: If eye irritation persists: Get medical advice / attention. P305 + P351 + P338: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if necessary, and do so easily. Keep rinsing. P501: Dispose of contents / container in accordance with local regulations. S 25: Avoid contact with eyes. S26: In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S60: This product and its packaging (container) should be disposed of as hazardous waste.
56	AF340	Defoamer	Used for probe filling fluid - prevents foaming during mechanical brine agitation	cubic meter	0.31	0.31	0.39	0.14	0.09	0.13	0.09	0.07	0.28	0.13	H304: May be fatal if swallowed and enters airways. R65: Harmful: may cause lung damage if swallowed.	P301 + P310: IF SWALLOWED: Immediately call a POISON CENTER or doctor / physician. P331: DO NOT induce vomiting. P405: Store under lock and key. P501: Dispose of contents / container to an approved waste disposal facility.
57	EB 8796	Demulsifier	Used for completion fluid - decomposes emulsions in the formation close to the well	cubic meter	0.31	0.31	0.39	0.14	0.09	0.13	0.09	0.07	0.28	0.13	R36 Irritating to eyes. R40 Possible carcinogenic effect, insufficient evidence. R51 / 53 Toxic to aquatic organisms, may cause long-term adverse effects long on the aquatic environment. R65 Harmful: may cause lung damage if swallowed. R66 Repeated exposure may cause skin dryness or cracking. R67 Inhalation of vapors may cause drowsiness and dizziness.	S25 Avoid contact with eyes. S26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S36 / 37 Wear suitable protective equipment and gloves. S57 Use suitable packaging (container) to avoid contamination of the environment. S60 Dispose of product and packaging (container) as hazardous waste. S61 Avoid dispersal in the environment. Refer to special instructions / safety data sheet. S62 If swallowed, do not induce vomiting; consult a doctor immediately and show the package (container) or label.
58	DFS-XFL	Low residue crosslinkable polymer	Used for completion fluid - temporary control of fluid loss	cubic meter	0.31	0.31	0.39	0.14	0.09	0.13	0.09	0.07	0.28	0.13	H319 - Causes serious eye irritation	P264 - Wash face, hands and any exposed skin thoroughly after handling P280 - Wear protective gloves / protective clothing / eye protection / face protection P305 + P351 + P338 - IN EYE CONTACT: Rinse cautiously with water for several minutes. Remove contact lenses, if any, and easy to do. Continue rinsing. P337 + P313 - If eye irritation persists: Get medical attention / care

Appendix H. Lists of estimated chemicals during drilling phase

Appendix H. List of estimated chemicals

2 – List of estimated chemicals during construction/installation phase

Appendix H. List of estimated chemicals during construction/installation phase

No.	Product name	Description	Usage	Measurement unit	Quantity	Risk and hazard phrase (H/R)	Precautionary and security (P/S)
1	Ferrocid 8583	Biocide	Used to prevent the growth of bacteria in the well completion fluid	cubic meter	1	H314 Causes severe skin burns and eye damage. H317 May cause an allergic skin reaction. H318 May cause serious eye damage / eye irritation H400 Very toxic to aquatic life H410 Toxic to aquatic life with long lasting effects. EUH071 Corrosive to the respiratory tract.	P261 Avoid inhaling mist / vapor / spray. P273 Avoid dispersal in the environment. P280 Wear protective gloves / protective clothing / eye protection / face protection / hearing protection P301 + P330 + P331 IF SWALLOWED: Rinse mouth. DO NOT induce vomiting. P303 + P361 + P353 IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [or take a shower]. P304 + P340 IF INHALED: Remove person to fresh air and keep in a comfortable position for breathing. P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if necessary, and if this can be done easily. Keep rinsing. P310 Call a POISON CENTER / doctor immediately. P501 Dispose of contents / container in accordance with local / regional / national / international regulations.
2	Hydrosure™ HD-5000	Hydrotest chemical	Used for hydrotesting pipeline and flowlines	cubic meter	57	H302 Harmful if swallowed. H314 Causes severe skin burns and eye damage. H318 May cause serious eye damage / eye irritation H373 May cause damage to organs through prolonged or repeated exposure. H400 Very toxic to aquatic life. EUH031 Contact with acids liberates toxic gas	P260 Do not breathe dust/fume/gas/mist/vapors/spray. P273 Avoid release to the environment. P280 Wear protective gloves/ protective clothing/eye protection/ face protection. P301 + P312 + P330 IF SWALLOWED: Call a POISON CENTER or doctor/ physician if you feel unwell. Rinse mouth. P301 + P330 + P331 IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. P305 + P351 + P338 + P310 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/ physician.
3	MULTITREAT 9379	Oxygen Scavenger	Used to capture oxygen molecules from the well completion fluid to prevent corrosion of the tubing column e	cubic meter	0.2	H315 Causes skin irritation. H319 Causes serious eye irritation H335 May cause respiratory irritation	P261 Avoid breathing dust/ fume/ gas/ mist/ vapors/ spray. P280 Wear eye protection/ face protection. P280 Wear protective gloves. P304 + P340 + P312 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER/doctor if you feel unwell. P337 + P313 If eye irritation persists: Get medical advice/ attention. P403 + P233 Store in a well-ventilated place. Keep container tightly closed.
4	PETROSWEET HSW85790	H2S Scavenger	Used for the decomposition of H2S molecules into well completion fluid	cubic meter	0.1	H315 Causes serious eye irritation. H319 Causes skin irritation. H317 May cause an allergic skin reaction. H341 Suspected of causing genetic defects. H335 May cause respiratory irritation.	P201, P280, P304 + P340 + P312, P405, P501 Obtain special instructions before use. Wear protective gloves: > 8 hours (breakthrough time): nitrile Gloves. Wear eye or face protection: Recommended: Safety glasses. Wear protective clothing. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or physician if you feel unwell.
5	Multi-use product aerosol (WD40)	Lubricant, Penetrant	Used for equipment installation	cubic meter	0.01	Aspiration Toxicity Category 1 Flammable Liquid Category 3 Aspiration Toxicity Category 1 Specific Target Organ Toxicity Single Exposure Category 3 (nervous system effects) Simple Asphyxiant Gas Under Pressure, Compressed Gas	Keep away from heat, sparks, open flames, hot surfaces. – No smoking. Do not spray on an open flame or other ignition source. Pressurized container: Do not pierce or burn, even after use. Avoid breathing vapors or mists. Use only outdoors or in a well-ventilated area. IF SWALLOWED: Immediately call a POISON CENTER or physician. Do NOT induce vomiting. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or physician if you feel unwell. Store locked up. Protect from sunlight. Do not expose to temperatures exceeding 50°C/122°F. Store in a well-ventilated place. Dispose of contents and container in accordance with local and national regulations.

Appendix H. List of estimated chemicals during construction/installation phase

6	Diesel Fuel	Diesel Fuel Low Sulphur	Fuel to supply thr vehicles and electric generators used for the execution of construction work onshore	cubic meter	3745	<p>H226 Harmful liquid and vapors</p> <p>H304 May be deadly if swolled or enters airways</p> <p>H315 Causes skin irritation.</p> <p>H332 Harmful if inhaled</p> <p>H351 May cause cancer</p> <p>H373 Can cause organ damage in case of repeated or prolonged exposure</p> <p>H411: Toxic to aquatic life with long lasting effects.</p>	<p>P210: Keep away from heat, hot surfaces, sparks, open flames, and other ignition sources. No smoking.</p> <p>P260: Avoid breathing mist / vapors.</p> <p>P264: Wash skin thoroughly after handling.</p> <p>P273: Avoid release to the environment.</p> <p>P280: Wear protective gloves/protective clothing/eye protection/face protection.</p> <p>P301 + P310: IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician.</p> <p>P331: Do NOT induce vomiting.</p> <p>P501: Dispose of contents and container in accordance with local regulations.</p>
7	Naval Diesel Fuel	Naval Diesel Fuel Low Sulphur	Fuel for support vessels for construction / installation work offshore	cubic meter	31657	<p>H332 Harmful if inhaled</p> <p>H350 May cause cancer</p> <p>H361D Suspected of damaging fertility or the unborn child.</p> <p>H373 Can cause organ damage in case of repeated or prolonged exposure</p> <p>H410 Toxic to aquatic life with long lasting effects.</p> <p>EUH 066 Repeated exposure may cause skin dryness or cracking.</p> <p>Restricted to professional use due to carcinogenic classification, category 1B, except for use as fuel.</p>	<p>P201 Obtain special instructions before use.</p> <p>P260: Avoid breathing mist / vapors.</p> <p>P273: Avoid release to the environment.</p> <p>P280: Wear protective gloves/protective clothing/eye protection/face protection.</p> <p>P308+313 IF exposed or concerned: Get medical advice/attention</p> <p>P501: Dispose of contents and container in accordance with local regulations.</p>
8	CARBOTHANE 134 HG PART A	Component of multicomponent industrial coatings	Used to paint and coat equipment and pipes	cubic meter	0.02	<p>H225 Highly flammable liquid and vapour.</p> <p>H315 Causes skin irritation.</p> <p>H319 Causes serious eye irritation.</p> <p>H350- 1A May cause cancer.</p> <p>H361 Suspected of damaging fertility or the unborn child.</p> <p>H372 Causes damage to organs through prolonged or repeated exposure.</p>	<p>P201 Obtain special instructions before use.</p> <p>P202 Do not handle until all safety precautions have been read and understood.</p> <p>P210 Keep away from heat/sparks/open flames/hot surfaces. – No smoking.</p> <p>P235 Keep cool.</p> <p>P260 Do not breathe dust/fume/gas/mist/vapors/spray.</p> <p>P264 Wash hands thoroughly after handling.</p> <p>P280 Wear protective gloves/protective clothing/eye protection/ face protection.</p> <p>P284 Wear respiratory protection.</p> <p>P305+351+338 IF IN EYES: Rinse cautiously with water for several minutes. Appendix H. List of estimated chemicals during construction/installation phase

12	AMERLOCK 2/400 Light Tint RESIN	Coating paint	Used to paint and coat equipment and pipes	cubic meter	0.03	Flammable liquid and vapor. Causes skin irritation. May cause an allergic skin reaction. Causes serious eye irritation. May cause respiratory irritation. Suspected of causing cancer.	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wear protective gloves, protective clothing and eye or face protection. Keep away from heat, hot surfaces, sparks, open flames, and other ignition sources. No smoking. Use explosion-proof electrical, ventilating or lighting equipment. Use non-sparking tools. Take action to prevent static discharges. Use only outdoors or in a well-ventilated area. Avoid breathing vapor. Wash thoroughly after handling. Contaminated work clothing must not be allowed out of the workplace.
13	AMERCOAT 450H CURE	Coating paint	Used to paint and coat equipment and pipes	cubic meter	0.02	Flammable liquid and vapor. May cause an allergic skin reaction. Harmful if inhaled. May cause allergy or asthma symptoms or breathing difficulties if inhaled. May cause respiratory irritation. May cause drowsiness or dizziness.	Wear protective gloves, protective clothing and eye or face protection. Wear respiratory protection. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Use explosion-proof electrical, ventilating or lighting equipment. Use non-sparking tools. Take action to prevent static discharges. Use only outdoors or in a well-ventilated area. Avoid breathing vapor. Contaminated work clothing must not be allowed out of the workplace.
14	Acrylic LACQUER THINNER	Painting-related material	Used to paint and coat equipment and pipes	cubic meter	0.04	Highly flammable liquid and vapor. Harmful if swallowed. Causes serious eye irritation. Causes skin irritation. Suspected of damaging the unborn child. Suspected of causing cancer. May cause respiratory irritation. May cause drowsiness and dizziness. May cause damage to organs through prolonged or repeated exposure. (central nervous system (CNS), hearing organs, kidneys, liver)	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wear protective gloves, protective clothing and eye or face protection. Keep away from heat, hot surfaces, sparks, open flames, and other ignition sources. No smoking. Use explosion-proof electrical, ventilating or lighting equipment. Use non-sparking tools. Take action to prevent static discharges. Use only outdoors or in a well-ventilated area. Avoid breathing vapor. Wash thoroughly after handling. Contaminated work clothing must not be allowed out of the workplace.
15	THINNER 21-25	Paint THINNER	Used to paint and coat equipment and pipes	cubic meter	0.01	Flammable liquid and vapor. May be fatal if swallowed and enters airways. Causes skin irritation. Causes serious eye irritation. Harmful if inhaled. Suspected of causing cancer. Causes damage to organs through prolonged or repeated exposure. (central nervous system (CNS))	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wear protective gloves, protective clothing and eye or face protection. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Use explosion-proof electrical, ventilating or lighting equipment. Use non-sparking tools. Take action to prevent static discharges. Keep container tightly closed. Use only outdoors or in a well-ventilated area. Do not breathe vapor. Do not eat, drink, or smoke when using this product. Wash thoroughly after handling.
16	Super Mud Dry	Viscosifier	Used to increase the viscosity of the well completion fluid	cubic meter	0.01	Product not classified as hazardous according to US / EU regulations.	May cause slight skin irritation, especially with prolonged or repeated exposure. May cause irritation to the eyes that should cease on removal of the product. Inhalation of dust may cause irritation to the respiratory system. Very slippery underfoot when wet. If handled roughly dust may be created - as with many organic powders airborne dust clouds may cause a dust explosion hazard. Use personal protective equipment suitable for the task in hand. Respiratory protection may be required if dust is created during cleanup operations. Avoid formation of airborne dust clouds. The products become very slippery underfoot when wet.

Appendix H. List of estimated chemicals during construction/installation phase

17	MOBILGREASE 28	Multi-Vehicle Multi-Purpose Grease	Used for construction vehicles onshore	cubic meter	As needed up to 0.01	High-pressure injection under skin may cause serious damage. Excessive exposure may result in eye, skin, or respiratory irritation. Secondary amines or materials containing secondary amines should not be added to this product due to the risk of forming nitrosamines, some of which have been shown to be carcinogenic in lab animals.	Prevent small spills and leakage to avoid slip hazard. Contains Sodium nitrite. Do not add amines which may form cancer causing nitrosamines.
18	PPG THINNER 2	Thinner for industrial coatings	Used to paint and coat equipment and pipes	cubic meter	0.04	H225 Highly flammable liquid and vapour. H304 May be fatal if swallowed and enters airways. H315 Causes skin irritation. H319 Causes serious eye irritation. H336 May cause drowsiness or dizziness. H361 Suspected of damaging fertility or the unborn child. H373 May cause damage to organs through prolonged or repeated exposure.	P210 Keep away from heat/sparks/open flames/hot surfaces. – No smoking. P235 Keep cool. P260 Do not breathe dust/fume/gas/mist/vapors/spray. P280 Wear protective gloves/protective clothing/eye protection/ face protection. P284 Wear respiratory protection. P301+310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P305+351+338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing. P308+313 IF exposed or concerned: Get medical advice/attention P314 Get medical advice/attention if you feel unwell. P331 Do NOT induce vomiting. P332+313 If skin irritation occurs: Get medical advice/attention. P403+233 Store in a well-ventilated place. Keep container tightly closed.
19	PPG THINNER 215	Thinner for industrial coatings	Used to paint and coat equipment and pipes	cubic meter	0.03	H226 Flammable liquid and vapour.	P210 Keep away from heat/sparks/open flames/hot surfaces. – No smoking. P403+233 Store in a well-ventilated place. Keep container tightly closed.
20	Loctite® Clear Silicone Sealant	Silicone Sealant	Used for equipment installation	cubic meter	As needed up to 0.01	SKIN IRRITATION 2 EYE IRRITATION 2A SKIN SENSITIZATION 1	Avoid breathing vapors, mist, or spray. Wash thoroughly after handling. Contaminated work clothing should not be allowed out of the workplace. Wear eye and face protection. Wear protective gloves. IF ON SKIN: Wash with plenty of soap and water. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present, and easy to remove. Continue rinsing. If irritation or rash occurs: Get medical attention. If eye irritation persists: Get medical attention. Remove contaminated clothing. Dispose of contents and / or container in accordance with federal, state / provincial, and local government regulations.

Appendix H. List of estimated chemicals during construction/installation phase

21	Locite PL Premium Max Construction Adhesive	Adhesive	Used for equipment installation	cubic meter	0.008	ACUTE TOXICITY INHALATION 4 SKIN IRRITATION 2 SERIOUS EYE DAMAGE 1 RESPIRATORY SENSITIZATION 1 SKIN SENSITIZATION 1 CARCINOGENICITY 1A REPEATED EXPOSURE 1	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not breathe dust or fumes. Wash affected area thoroughly after handling. Do not eat, drink, or smoke when using this product. Use only outdoors or in a well ventilated area. Contaminated work clothing should not be allowed out of the workplace. Wear protective gloves, clothing, eye, and face protection. In case of inadequate ventilation wear respiratory protection. IF ON SKIN: Wash with plenty of water. IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTER or doctor / doctor if you feel unwell. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present, and easy to do. Continue rinsing. IF you are exposed or worried: Get medical attention. If irritation or rash occurs: Get medical attention. Remove contaminated clothing. Store locked. Dispose of contents and / or container in accordance with governmental, regional, and local regulations.
22	BARA-KADE® BENTONITE	Bentonite	Used to increase the viscosity of the well completion fluid	metric ton	875	H350 - May cause cancer by inhalation H372 - Causes damage to organs through prolonged or repeated exposure if inhaled	P201 - Obtain special instructions before use P202 - Do not handle until all safety precautions have been read and understood P260 - Do not breathe dust/fume/gas/mist/vapors/spray P264 - Wash face, hands, and any exposed skin thoroughly after handling P270 - Do not eat, drink, or smoke when using this product P280 - Wear protective gloves/eye protection/face protection
23	MOBIL 1 5W-30	Lubricant Oil	Used for construction vehicles onshore	cubic meter	As needed up to 0.01	High-pressure injection under skin may cause serious damage. Excessive exposure may result in eye, skin, or respiratory irritation.	Avoid contact with the product used. Prevent small spills and leaks to avoid the danger of slipping. The material may accumulate static charges that may cause an electrical spark (ignition source). When the material is handled in bulk, an electric spark can ignite any flammable vapors from liquids or residues that may be present. Use proper grounding procedures.

Appendix H. List of estimated chemicals

3 – List of estimated chemicals during operation phase

Appendix H. List of estimated chemical during operation phase

No	Product name	Description	Usage	Measurement unit	Quantity/year	Risk and hazard phrase (H/R)	Precautionary and security (P/S)
1	Triethylene Glycol	Lean TEG	Used for gas dehydration system.	m ³	288	H302 Harmful if swallowed H316 Causes mild skin irritation. H320 Causes eye irritation. H335 May cause respiratory irritation. H373 May cause damage to organs through prolonged or repeated exposure.	P261 Avoid breathing dust/fumes/gas/mist/vapors. P264 Wash thoroughly after handling. P270 Do not eat drink or smoke when using this product. P301 + P312 IF SWALLOWED: Call a POISON CENTER or doctor / physician if you feel unwell. P330 Rinse mouth. P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. P314 Get medical advice/attention if you feel unwell.
2	MULTITREAT 15439	Corrosion Inhibitor	Used for flow assurance (injected into wellhead)	m ³	112.4	H290 May be corrosive to metals. H302 Harmful if swallowed. H318 Causes serious eye damage. H373 May cause damage to organs through prolonged or repeated exposure. H412 Harmful to aquatic life with long lasting effects.	P260 Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. P273 Avoid release to the environment. P280 Wear eye protection/ face protection. P305 + P351 + P338 + P310 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor. P314 Get medical advice/ attention if you feel unwell. P390 Absorb spillage to prevent material damage. P501 Dispose of contents/ container to an approved waste disposal plant.
3	Nitrogen	Nitrogen	Used for the nitrogen system.	kg	543.2	Contains gas under pressure; may explode if heated. May displace oxygen and cause rapid suffocation.	Protect from sunlight. Store in a well-ventilated place
4	STEA06348A	Scale Inhibitor	Used for flow assurance (injected into wellhead)	m ³	121.6	H315 Causes skin irritation. H319 Causes serious eye irritation. H373 May cause damage to organs through prolonged or repeated exposure	P260 Do not breathe dust/fume/gas/mist/vapors/spray. P280 Wear protective gloves/ eye protection/ face protection. P302 + P352 IF ON SKIN: Wash with plenty of water. P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P314 Get medical advice/ attention if you feel unwell. P332+P313 If skin irritation occurs: Get medical advice/attention.
5	DFW43013 Defoamer	Defoamer	Used for flow assurance (injected into wellhead)	m ³	103.6	H319 Causes serious eye irritation.	P280, P264, P305 + P351 + P338
6	Methanol	Methanol	Used for flow assurance (injected into wellhead)	m ³	1728.4	H225 Highly flammable liquid and vapour. H331 Toxic if inhaled. H311 Toxic in contact with skin. H301 Toxic if swallowed. H370 Causes damage to organs. EUH031 Contact with acids liberates toxic gas	P210 Keep away from heat/sparks/open flames/hot surfaces. – No smoking. P260 Do not breathe dust/fume/gas/mist/vapors/spray. P301+P310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P302 + P352 IF ON SKIN: Wash with plenty of soap and water. P304 + P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. P405 Store locked up.
7	Diesel fuel	Diesel fuel	Used to power the backup generator installed on the project's onshore site.	m ³	As needed up to 0.5	H226 – Flammable liquid and vapor. H315 – Causes Skin irritation. H304 – May be fatal if swallowed and enters airways. H332 - Harmful if inhaled H336 – May cause drowsiness or dizziness. H350 – May cause cancer. H411 – Toxic to aquatic life with long lasting effects. H319 – May cause eye damage/irritation. H373 May cause damage to organs through prolonged or repeated exposure.	P210 - Keep away from heat/sparks/open flames/hot surfaces. – No smoking. P260 - Do not breathe dust/fume/gas/mist/vapors/spray. P273 – Avoid release to the environment. P280 - Wear protective gloves/protective clothing/eye protection/face protection. P301+310 - If swallowed: Immediately call a poison center/doctor/... P331 - Do NOT induce vomiting. P501 – Dispose of contents/container in accordance with local/regional/national/international regulation.
8	Ferrocid 8583	Biocide	Used to clean the open drainage system on the marine platform.	m ³	As needed up to 1	H314 Causes severe skin burns and eye damage. H317 May cause an allergic skin reaction. H318 May cause serious eye damage / eye irritation H400 Very toxic to aquatic life H410 Toxic to aquatic life with long lasting effects. EUH071 Corrosive to the respiratory tract.	P261 Avoid inhaling mist / vapor / spray. P273 Avoid dispersal in the environment. P280 Wear protective gloves / protective clothing / eye protection / face protection / hearing protection P301 + P330 + P331 IF SWALLOWED: Rinse mouth. DO NOT induce vomiting. P303 + P361 + P353 IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water [or take a shower].

Appendix H. List of estimated chemical during operation phase

No	Product name	Description	Usage	Measurement unit	Quantity/year	Risk and hazard phrase (H/R)	Precautionary and security (P/S)
							<p>P304 + P340 IF INHALED: Remove person to fresh air and keep in a comfortable position for breathing.</p> <p>P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if necessary, and if this can be done easily. Keep rinsing.</p> <p>P310 Call a POISON CENTER / doctor immediately.</p> <p>P501 Dispose of contents / container in accordance with local / regional / national / international regulations.</p>
9	Transaqua HT2	Hydraulic Fluid - Aqueous motive fluid	Used for hydraulic power units for subsea valves	m ³	1.29	<p>H302 Harmful if swallowed.</p> <p>H373 May cause damage to organs through prolonged or repeated exposure</p>	<p>P260 - Do not breathe vapor.</p> <p>P264 Wash thoroughly after handling.</p> <p>P270 Do not drink or smoke when using this product.</p> <p>P314 Seek medical advice if you feel unwell.</p> <p>P301 + P312, P330 IF SWALLOWED: Call a physician if you feel unwell. Rinse mouth.</p> <p>P501 Dispose of contents / container in accordance with local / regional / national / international regulations.</p>
10	MOBIL EAL 224H	Hydraulic Fluid - Mineral oil	Used for hydraulic power units for caisson pumps	m ³	2	<p>Pressure injection under the skin can cause serious injury.</p> <p>Slightly irritating to the skin.</p> <p>May be irritating to eyes, nose, throat, and lungs.</p>	<p>IF INHALED - Remove from additional exposure. For those who provide assistance, avoid exposing yourself or others. Use appropriate respiratory protection. If you experience respiratory irritation, dizziness, nausea, or unconsciousness, seek medical attention immediately. If breathing has stopped, help with ventilation with a mechanical device or use mouth-to-mouth resuscitation.</p> <p>IF ON SKIN - Wash areas with soap and water. Remove contaminated clothing. Wash contaminated clothing before reuse. If the product is injected into or under the skin or any part of the body, regardless of the appearance of the wound or its size, the individual should be evaluated immediately by a surgical emergency physician. Even if the initial symptoms of high blood pressure injection may be minimal or absent, surgical treatment in the first few hours can significantly reduce the final degree of injury.</p> <p>IF IN EYES - Rinse well with water. If irritation occurs, seek medical attention.</p> <p>IF SWALLOWED - First aid is not normally required. Seek medical attention if discomfort occurs.</p>

Appendix I. Chemicals safety data sheets

Appendix I. Chemicals Safety Data Sheets

1 – Safety Data Sheets of chemicals used during drilling phase

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

SECȚIUNEA 1: Identificarea substanței/amestecului și a societății/întreprinderii

1.1 Element de identificare a produsului

Denumirea comercială Ferrocid 8583
Număr articol 48202
Identificatori (Uniunea Europeană)
Numărul de înregistrare (REACH) nerelevante (amestec)

1.2 Utilizări relevante identificate ale substanței sau amestecului și utilizări contraindicate

Utilizări relevante identificate Biocid
Produse chimice de tratare a apei
Agent de condiționare

1.3 Detalii privind furnizorul fișei cu date de securitate

Kurita Europe GmbH
Theodor-Heuss-Anlage 2
DE-68165 Mannheim
Germania

Telefon: + 49 621 1218-3000
e-mail: KEG_PS@kurita-water.com
Website: www.kurita.eu

Producător

Furnizor a produsului

Țara	Denumirea	Strada	Codul poștal/ localitatea	Telefon	Telefax	Website

Assistance in mother tongue.

SECȚIUNEA 2: Identificarea pericolelor

2.1 Clasificarea substanței sau a amestecului

Clasificare conform Regulamentului (CE) nr. 1272/2008 (CLP)

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

<i>Clasa de pericol</i>	<i>Clasa și categoria de pericol</i>	<i>Categorie</i>	<i>Fraza de pericol</i>
corodarea/iritarea pielii	Skin Corr. 1C	1C	H314
lezarea gravă a ochilor/iritarea ochilor	Eye Dam. 1	1	H318
sensibilizarea pielii	Skin Sens. 1A	1A	H317
periculos pentru mediul acvatic - pericol acut	Aquatic Acute 1	1	H400
periculos pentru mediul acvatic - pericol cronic	Aquatic Chronic 1	1	H410

Pentru textul complet al abrevierilor: a se vedea SECȚIUNEA 16.

Cele mai importante efecte adverse fizico-chimice, asupra sănătății umane și asupra mediului

Corodarea pielii produce leziunea ireversibilă a pielii; anume, necroza vizibilă trecând de epidermă și ajungând până la dermă. Vărsarea și apa de stingere a incendiului pot cauza poluarea cursurilor de apă.

2.2 Elemente pentru etichetă

Etichetarea în conformitate cu Regulamentul (CE) nr. 1272/2008 (CLP)

Cuvânt de avertizare pericol

Pictograme

GHS05, GHS07,
GHS09

Frazele de pericol

H314 Provoacă arsuri grave ale pielii și lezarea ochilor.
H317 Poate provoca o reacție alergică a pielii.
H410 Foarte toxic pentru mediul acvatic cu efecte pe termen lung.

Frazele de precauție

P261 Evitați să inspirați ceața/vaporii/spray-ul.
P273 Evitați dispersarea în mediu.
P280 A se purta mănuși de protecție/îmbrăcăminte de protecție/echipament de protecție a ochilor/echipament de protecție a feței/protecție a auzului/....
P301+P330+P331 ÎN CAZ DE ÎNGHIȚIRE: clătiți gura. NU provocați vomă.
P303+P361+P353 ÎN CAZ DE CONTACT CU PIELEA (sau cu părul): Scoateți imediat toată îmbrăcăminte contaminată. Clătiți pielea cu apă [sau faceți duș].
P304+P340 ÎN CAZ DE INHALARE: transportați persoana la aer liber și mențineți-o într-o poziție confortabilă pentru respirație.
P305+P351+P338 ÎN CAZ DE CONTACT CU OCHII: Clătiți cu atenție cu apă timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.
P310 Sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ/un medic.
P501 Aruncați conținutul/recipientul în conformitate cu reglementările locale/regionale/naționale/internaționale.

Informații suplimentare privind pericolele

EUH071 Corosiv pentru căile respiratorii.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Ingrediente periculoase pentru etichetare

masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)

2.3 Alte pericole

Rezultatele evaluării PBT și vPvB

Acest amestec nu conține nicio substanță evaluată a fi PBT sau vPvB.

SECȚIUNEA 3: Compoziție/informații privind componenții

3.2 Amestecuri

Ingrediente periculoase

Denumirea substanței	Element de identificare	% Masă	Clasificare conf. 1272/2008/CE	Limite de conc. specifice	Factori M
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	Nr. CAS 55965-84-9 Nr. index 613-167-00-5	1 - < 3	Acute Tox. 3 / H301 Acute Tox. 2 / H310 Acute Tox. 2 / H330 Skin Corr. 1C / H314 Eye Dam. 1 / H318 Skin Sens. 1A / H317 Aquatic Acute 1 / H400 Aquatic Chronic 1 / H410 EUH071	Skin Corr. 1C; H314: C ≥ 0,6 % Skin Irrit. 2; H315: 0,06 % ≤ C < 0,6 % Eye Dam. 1; H318: C ≥ 0,6 % Eye Irrit. 2; H319: 0,06 % ≤ C < 0,6 % Skin Sens. 1A; H317: C ≥ 0,0015 %	factor M (acut) = 100.0 factor M (cronic) = 100.0

Pentru textul complet al abrevierilor: a se vedea SECȚIUNEA 16.

SECȚIUNEA 4: Măsurile de prim ajutor

4.1 Descrierea măsurilor de prim ajutor

Observații generale

Nu lăsați persoana afectată nesupravegheată. Evacuați victima din zona de pericol. Mențineți persoana afectată la căldură, nemișcată și acoperită. Scoateți imediat toată îmbrăcămintea contaminată. În caz de pierdere a cunoștinței, așezați persoana în poziție laterală stabilă. Nu-i administrați niciodată ceva pe gură.

După inhalare

În caz de iritare a tractului respirator, consultați un medic.

După contactul cu pielea

Scoateți îmbrăcămintea contaminată. După contactul cu pielea, scoateți imediat toată îmbrăcămintea contaminată și spălați imediat cu multă apă. Sunați imediat la un medic.

După contactul cu ochii

Clătiți din abundență cu apă proaspătă și curată, timp de cel puțin 10 minute, ținând pleoapele depărtate. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți. Sunați un medic imediat.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

După ingerare

Se clătește gura cu apă (numai dacă persoana este conștientă). NU provocați vomă. Sunați imediat la un medic.

4.2 Cele mai importante simptome și efecte, atât acute, cât și întârziate

Provoacă arsuri grave ale pielii și lezarea ochilor. Ingestion causes pain, burns, abdominal pain, possible general impact (shock).

4.3 Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare

No specific antidot is known. Treatment of the symptoms.

SECȚIUNEA 5: Măsurile de combatere a incendiilor

5.1 Mijloace de stingere a incendiilor

Mijloace de stingere corespunzătoare

Pulverizare de apă, Spumă rezistentă la alcool, Praf de extingtor, Dioxid de carbon (CO₂)

Mijloace de stingere necorespunzătoare

Jet continuu de apă

5.2 Pericole speciale cauzate de substanța sau amestecul în cauză

Produși de combustie periculoși

Oxizi de azot (NO_x), Monoxid de carbon (CO), Dioxid de carbon (CO₂), Oxizi de sulf (SO_x)

5.3 Recomandări destinate pompierilor

Mențineți containerele reci prin pulverizarea de apă. A nu se inspira fumul în caz de incendiu și/sau explozie. Nu lăsați apa folosită la stingerea incendiului să pătrundă în canalizări sau în cursurile de apă. Colectați separat apa contaminată folosită la stingerea incendiilor. Stingeți incendiul de la o distanță rezonabilă, luând măsuri normale de precauție.

Echipamentul de protecție special destinat pompierilor

Echipament de protecție chimică, Folosiți aparate de protecție respiratorie adecvate

SECȚIUNEA 6: Măsurile de luat în caz de dispersie accidentală

6.1 Precauții personale, echipament de protecție și proceduri de urgență

Pentru personalul care nu este implicat în situații de urgență

Evacuați persoana într-un loc sigur.

Pentru personalul care intervine în situații de urgență

Purtați aparat de respirat dacă sunteți expus la vapori/praf/spray/gaze. Utilizați echipamentul de protecție individuală conform cerințelor.

6.2 Precauții pentru mediul înconjurător

Păstrați la distanță față de canalele de scurgere și apele de suprafață sau subterane. Rețineți apa de spălare contaminată și eliminați-o. Chemicals generally shouldn't reach surface water.

6.3 Metode și material pentru izolarea incendiilor și pentru curățenie

Sfaturi privind modul de izolare a unei cantități vărsate

Acoperirea canalelor de evacuare

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Sfaturi privind modul de curățare a unei cantități vărsate

Ștergeți cu material absorbant (de ex. cârpă, fleece). Colectați scurgerile de produs: Material absorbant (de exemplu, nisip, diatomit, liant acid, liant universal, rumeguș etc.)

Tehnica adecvată de izolare

Utilizarea materialelor absorbante.

Alte informații referitoare la vărsări și dispersii

Puneți în containere adecvate pentru eliminare. Ventilați zona afectată.

6.4 Trimitere la alte secțiuni

Secțiunea 7: Manipularea și depozitarea. A se vedea și secțiunile 8 și 13 din fișă cu date de securitate.

SECȚIUNEA 7: Manipularea și depozitarea

7.1 Precauții pentru manipularea în condiții de securitate

Recomandări

Măsurile de prevenire a incendiilor, precum și a generării de aerosoli și praf

Nu sunt necesare măsuri speciale.

Sfaturi privind igiena generală la locul de muncă

Spălați mâinile după utilizare. Nu mâncați, beți sau fumați în zonele de lucru. Îndepărtați îmbrăcămintea contaminată și echipamentul de protecție înainte de a pătrunde în zonele în care se ia masa. Nu țineți niciodată mâncarea sau băutura în apropiere de produsele chimice. Nu puneți niciodată produsele chimice în recipiente care sunt folosite în mod obișnuit pentru mâncare sau băutură. A se păstra departe de hrană, băuturi și hrană pentru animale.

7.2 Condiții de depozitare în condiții de securitate, inclusiv eventuale incompatibilități

Proiectarea specială a spațiilor de depozitare sau a rezervoarelor

Păstrați ambalajul închis ermetic și într-un loc bine ventilat.

Temperatura de depozitare

Temperatura de depozitare recomandată: <40 °C.

Compatibilitățile privind ambalarea

Păstrați numai în recipientul original. Pot fi utilizate exclusiv ambalajele omologate (de ex. conf. ADR).

7.3 Utilizare finală specifică (utilizări finale specifice)

Biocid. Produse chimice de tratare a apei. Agent de condiționare.

SECȚIUNEA 8: Controale ale expunerii/protecția personală

8.1 Parametri de control

Valorile limită naționale

Valori limită de expunere profesională (Limite de expunere la locul de muncă)

nu este relevant

8.2 Controale ale expunerii

Controale tehnice corespunzătoare

Ventilație generală.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Măsuri de protecție individuală (echipamentul de protecție personală)

Trebuie să existe garanții, ca instalațiile de clătire a ochilor și dușurile de siguranță să se afle aproape de locul de muncă.

Protecția ochilor/feței

A se purta mască de protecție a ochilor/feței.

Protecția pielii

Chemical resistant protective clothing.

Protecția mâinilor

A se purta mănuși corespunzătoare. Mănușile de protecție chimică adecvate sunt testate conform EN 374. Verificați etanșeitatea/impermeabilitatea înainte de utilizare. În scopuri speciale, se recomandă să verificați rezistența la produse chimice a mănușilor de protecție menționate mai sus, împreună cu furnizorul acestor mănuși. In case of spray contact at least protection index 2 recommended, according to more than 30 min. penetration time (EN 374).

Layer thickness of gloves at least: 0.4 mm

In case of prolonged and intensive contact protection index 6 recommended, according to more than 480 min. penetration time (EN 374).

Layer thickness of gloves at least: 0.7 mm.

Tipul de material

PVC: policlorură de vinil, PE: polietilenă, CR: cauciuc cloroprenic (clorobutadienic), NBR: cauciuc acrilonitrilbutadienic, IIR: cauciuc izobuten-izoprenic (butilcauciuc), FKM: elastomer cu fluor

Timpul de perforare a materialului din care sunt fabricate mănușile

Momentul de cedare și însusirile de origine ale materialului trebuie luate în considerare

Alte măsuri de protecție

Spălați-vă mâini bine după utilizare.

Protecția respirației

În cazul în care ventilarea este insuficientă, purtați echipament de protecție respiratorie.

Controlul expunerii mediului

Considerații privind eliminarea: a se vedea secțiunea 13.

SECȚIUNEA 9: Proprietățile fizice și chimice

9.1 Informații privind proprietățile fizice și chimice de bază

Aspect

Starea fizică	lichid
Culoarea	galben - verde - albastru deschis
Miros	fara miros
Pragul de acceptare a mirosului	nu este aplicabilă

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Alți parametri de securitate

pH (valoare)	ca. 4 – 6 (in aqueous solution: 10 ⁹ /l)
Punctul de topire/punctul de înghețare	ca. -5 °C
Punctul inițial de fierbere și intervalul de fierbere	ca. 102 °C
Punctul de aprindere	>101 °C
Viteza de evaporare	nedeterminat
Inflamabilitatea (solid, gaz)	nu este relevant (fluid)
Limita superioară/inferioară de inflamabilitate sau de explozie	nedeterminat
Presiunea de vapori	nedeterminat
Densitatea vaporilor	aceste informații nu sunt disponibile
Densitatea	ca. 1,04 g/cm ³ la 20 °C

Solubilitatea (solubilitățile)

Solubilitatea în apă	miscibil în orice proporție
-----------------------------	-----------------------------

Coeficientul de partiție

- n-octanol/apă (log KOW)	aceste informații nu sunt disponibile
Temperatura de autoaprindere	>600 °C
Temperatura de descompunere	nu există date disponibile

Vâscozitatea

Vâscozitatea cinematică	4,5 mm ² /s
Vâscozitatea dinamică	4,6 mPa s la 20 °C
Proprietăți explozive	nici una/nici unul
Proprietăți oxidante	nici una/nici unul

9.2 Alte informații

Nu există informații suplimentare.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

SECȚIUNEA 10: Stabilitate și reactivitate

10.1 Reactivitate

Acest material nu este reactiv în condiții normale de mediu ambiant.

10.2 Stabilitate chimică

Materialul este stabil în condiții ambientale normale, precum și în condițiile de temperatură și presiune în care se anticipează că vor avea loc depozitarea și manipularea.

10.3 Posibilitatea de reacții periculoase

Nu se cunosc reacții periculoase.

10.4 Condiții de evitat

Nu există condiții specifice cunoscute care trebuie evitate.

10.5 Materiale incompatibile

Nu există informații suplimentare.

10.6 Produși de descompunere periculoși

Produșii de descompunere periculoși anticipați în mod rezonabil care sunt produși în urma utilizării, depozitării, vărsării și încălzirii nu sunt cunoscuți. Produși de combustie periculoși: a se vedea secțiunea 5.

SECȚIUNEA 11: Informații toxicologice

11.1 Informații privind efectele toxicologice

Nu sunt disponibile date de testare pentru întregul amestec.

Procedura de clasificare

Metoda pentru clasificarea amestecului se bazează pe ingredientele amestecului (formula de aditivitate).

Toxicitate acută

Nu se clasifică ca fiind toxic(ă) acut(ă).

Product ATEmix oral : >2000 mg/kg
Product ATEmix dermal : >2000 mg/kg

Toxicitatea acută a componentilor amestecului

Denumirea substanței	Nr. CAS	Calea de expunere	Efect	Valoare	Specii
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	orală	LD50	64 ^{mg} /kg	șobolan
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	prin inhalare: praf/ceață	LC50	0,33 ^{mg} /l/4h	șobolan
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	dermică	LD50	87,12 ^{mg} /kg	iepure

Corodarea/iritarea pielii

Provoacă arsuri grave ale pielii și lezarea ochilor.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Lezarea gravă a ochilor/iritarea ochilor

Provoacă leziuni oculare grave.

Sensibilizarea căilor respiratorii sau a pielii

Poate provoca o reacție alergică a pielii.

Mutagenicitatea celulelor embrionare

Nu sunt disponibile date de testare pentru întregul amestec.

Cancerigenitate

Nu sunt disponibile date de testare pentru întregul amestec.

Toxicitatea pentru reproducere

Nu sunt disponibile date de testare pentru întregul amestec.

Toxicitate asupra unui organ țintă specific - o singură expunere

Nu sunt disponibile date de testare pentru întregul amestec.

Toxicitate asupra unui organ țintă specific - expunere repetată

Nu sunt disponibile date de testare pentru întregul amestec.

Pericol prin aspirare

Nu se clasifică ca prezentând pericol prin aspirare.

Alte informații

Corosiv pentru căile respiratorii.

SECȚIUNEA 12: Informații ecologice

12.1 Toxicitatea

Foarte toxic pentru mediul acvatic cu efecte pe termen lung.

Toxicitate acvatică (acută) a componentelor amestecului					
<i>Denumirea substanței</i>	<i>Nr. CAS</i>	<i>Efect</i>	<i>Durata de expunere</i>	<i>Valoare</i>	<i>Specii</i>
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	LC50	96 h	0,19 mg/l	pește
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	EC50	48 h	0,16 mg/l	nevertebrate acvatice
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	ErC50	72 h	19,9 µg/l	alge

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

Toxicitate acvatică (cronică) a componentelor amestecului

<i>Denumirea substanței</i>	<i>Nr. CAS</i>	<i>Efect</i>	<i>Valoare</i>	<i>Specii</i>	<i>Durata de expunere</i>
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	LC50	0,07 mg/l	pește	14 d
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	EC50	>0,18 mg/l	nevertebrate acvatice	21 d
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	ErC50	45,6 µg/l	alge	120 h

12.2 Persistența și degradabilitatea

Nu este ușor biodegradabil(ă).

Degradabilitatea componentelor amestecului

<i>Denumirea substanței</i>	<i>Nr. CAS</i>	<i>Proces</i>	<i>Rata de degradare</i>	<i>Timp</i>	<i>Metoda</i>
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	generare de dioxid de carbon	>60 %	29 d	

12.3 Potențialul de bioacumulare

A worth-mentioning accumulation in organisms is not expected.

Potențial de bioacumulare a componentelor amestecului

<i>Denumirea substanței</i>	<i>Nr. CAS</i>	<i>BCF</i>	<i>Log KOW</i>	<i>BOD5/COD</i>
masă de reacție compusă din 5-cloro-2-metil-2H-izotiazol-3-onă și 2-metil-2H-izotiazol-3-onă (3:1)	55965-84-9	54	≥-0,34 – ≤0,63 (pH valoare: 7, 10 °C)	

12.4 Mobilitatea în sol

Nu sunt disponibile date.

12.5 Rezultatele evaluării PBT și vPvB

Nu este aplicabilă.

Ferrocid 8583

număr articol: 48202

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

12.6 Alte efecte adverse

Potențialul de a afecta sistemul endocrin

Niciun ingredient nu figurează pe listă.

Observații

A nu se arunca în rețeaua de canalizare sau în apa de suprafață.

SECȚIUNEA 13: Considerații privind eliminarea

13.1 Metode de tratare a deșeurilor

Acest produs și ambalajul său se vor depozita ca un deșeu periculos. Alocarea de numere de identificare/marcaje pentru reziduuri trebuie să se efectueze corespunzător OID, specific procesului și branșei. Eliminarea deșeurilor de produs se va face conform legii 211/2011 privind regimul deșeurilor. ¶ Eliminarea deșeurilor de ambalaje se face cf. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje; HG 856/2002- evidența gestiunii deșeurilor și aprobarea listei deșeurilor. Legea 249/2015 privind modalitatea de gestionare a ambalajelor și a deșeurilor de ambalaje.

Informații relevante pentru tratarea deșeurilor

Este un deșeu periculos; pot fi utilizate exclusiv ambalajele omologate (de ex. conf. ADR). Ambalajele golite complet pot fi reciclate. Manipulați ambalajele contaminate în același mod ca și substanța respectivă.

Observații

Vă rugăm să luați în considerare dispozițiile naționale sau regionale relevante. Deșeurile vor fi selectate pe categorii care pot fi tratate separat de către facilitățile de gestionare a deșeurilor de la nivel local sau național. A nu se arunca în rețeaua de canalizare sau în apa de suprafață. Evitați dispersarea în mediu.

SECȚIUNEA 14: Informații referitoare la transport

14.1 Numărul ONU	3265
14.2 Denumirea corectă ONU pentru expediție	LICHID ORGANIC COROSIV, ACID, N.S.A.
Denumire tehnică (ingrediente periculoase)	(isothiazolinones)
14.3 Clasa (clasele) de pericol pentru transport	
Clasa	8
14.4 Grupul de ambalare	III
14.5 Pericole pentru mediul înconjurător	periculos pentru mediul acvatic
Substanță periculoasă pentru mediu (mediul acvatic)	isothiazolinones
14.6 Precauții speciale pentru utilizatori	
Nu există informații suplimentare.	
14.7 Transport în vrac, în conformitate cu anexa II la MARPOL și Codul IBC	
Încărcătura nu este destinată să fie transportată în vrac.	

Informații pentru fiecare Regulament-tip ONU

SECȚIUNEA 15: Informații de reglementare

15.1 Regulamente/legislație în domeniul securității, al sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză

Dispozițiile relevante ale Uniunii Europene (UE)

Restricții în conformitate cu REACH, Anexa XVII

Substanțe periculoase cu restricții (REACH, Anexa XVII)

Denumirea substanței	Denumirea conf. inventarului	Nr. CAS	Restricție
Ferrocid 8583	acest produs îndeplinește criteriile de clasificare în conformitate cu Regulamentul nr. 1272/2008/CE		R3

Legendă

R3

- Nu se utilizează în:
 - articole decorative destinate producerii unor efecte de lumină sau de culoare prin intermediul unor faze diferite, de exemplu, în lămpi decorative și în scrumiere;
 - obiecte destinate producerii de farse și capcane;
 - jocuri pentru unul sau mai mulți participanți sau orice alt articol destinat unei folosințe similare, chiar și cu aspecte decorative.
- Este interzisă introducerea pe piață a articolelor care nu se conformează punctului 1.
- Nu se introduc pe piață dacă conțin colorant, cu excepția cazului în care este necesar din motive fiscale, sau parfum ori ambele, dacă:
 - pot fi utilizate drept combustibili în lămpi decorative cu ulei pentru a fi furnizate publicului larg; și
 - prezintă un pericol în caz de inhalare și sunt etichetate cu R65 sau H304.
- Lămpile decorative cu ulei destinate publicului larg nu sunt introduse pe piață decât dacă sunt conforme standardului european privind lămpile decorative cu ulei (EN 14059), adoptat de Comitetul European de Standardizare (CEN).
- Fără a aduce atingere punerii în aplicare a altor dispoziții comunitare referitoare la clasificarea, ambalarea și etichetarea substanțelor și a amestecurilor periculoase, furnizorii se asigură, înainte de introducerea pe piață, că sunt respectate următoarele cerințe:
 - uleiurile lampante, etichetate cu R65 sau H304, destinate publicului larg, sunt marcate vizibil, lizibil și de neșters după cum urmează: „A nu se lăsa la îndemâna copiilor lămpi umplute cu acest lichid” și, începând cu 1 decembrie 2010, „Doar o înghițitură de ulei lampant – sau chiar suptul fitilului lămpilor – poate cauza leziuni pulmonare care constituie o amenințare la adresa vieții”;
 - lichidele de aprins focul pentru barbecue, etichetate cu R65 sau H304, destinate publicului larg, sunt marcate, începând cu 1 decembrie 2010, lizibil și de neșters, după cum urmează: „O singură înghițitură din acest lichid poate cauza leziuni pulmonare care constituie o amenințare la adresa vieții”;
 - uleiurile lampante și lichidele de aprins focul pentru barbecue, etichetate cu R65 sau H304, destinate publicului larg, sunt îmbuteliate, începând cu 1 decembrie 2010, în recipiente negre opace care nu depășesc 1 litru.
- Până la 1 iunie 2014 cel târziu, Comisia solicită Agenției Europene pentru Produse Chimice să pregătească un dosar, în conformitate cu articolul 69 din prezentul regulament, în scopul de a interzice, dacă este cazul, lichidele de aprins focul pentru barbecue și combustibilii pentru lămpile decorative, etichetați R65 sau H304, destinați publicului larg.
- Persoanele fizice sau juridice care introduc pe piață pentru prima oară uleiuri lampante și lichide de aprins focul pentru barbecue, etichetate cu R65 sau H304, furnizează autorității competente din statul membru în cauză, până la 1 decembrie 2011 și apoi anual, date privind soluții alternative pentru uleiul lampant și lichidele de aprins focul pentru barbecue etichetate R65 sau H304. Statele membre pun datele respective la dispoziția Comisiei.

Abrevieri si acronime

Abr.	Descrieri ale abrevierilor utilizate
Acute Tox.	Toxicitate acută
ADN	Accord européen relatif au transport international des marchandises dangereuses par voies de navigation intérieures (Acordul european privind transportul internațional al mărfurilor periculoase pe căile navigabile interioare)
ADR	Accord européen relatif au transport international des marchandises dangereuses par route (Acordul european referitor la transportul rutier internațional al mărfurilor periculoase)
Aquatic Acute	Periculos pentru mediul acvatic - pericol acut
Aquatic Chronic	Periculos pentru mediul acvatic - pericol cronic
BCF	Bioconcentration factor (factor de bioconcentrare)
BOD	Consumul biochimic de oxigen
CAS	Chemical Abstracts Service (departament care deține cea mai cuprinzătoare listă a substanțelor chimice)
CLP	Regulamentul (CE) Nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor
COD	Consumul chimic de oxigen
DGR	Reglementări privind Mărfurile Periculoase (a se vedea IATA/DGR)
EC50	Concentrația Efectivă 50%. CE50 corespunde concentrației unei substanțe testate care produce schimbări de 50% în efect (de ex., asupra creșterii) într-un interval de timp specificat
EINECS	European Inventory of Existing Commercial Chemical Substances (Inventarul european al substanțelor chimice existente introduse pe piață)
ELINCS	European List of Notified Chemical Substances (Lista europeană a substanțelor chimice notificate)
EmS	Emergency Schedule (Plan de urgență)
ErC50	≡ CE50: în această metodă, acea concentrație a substanței de testat care determină o reducere cu 50 % fie a creșterii (CEb50), fie a vitezei de creștere (CEr50) în comparație cu testul martor
Eye Dam.	Lezare gravă a ochiului
Eye Irrit.	Iritant pentru ochi
factor M	Înseamnă un factor de multiplicare. Acesta se aplică concentrației unei substanțe clasificate ca fiind periculoasă pentru mediul acvatic, toxicitate acută categoria 1 sau toxicitate cronică categoria 1, și care se utilizează pentru determinarea, prin metoda însumării, a clasificării unui amestec, în care este prezentă substanța
IATA	International Air Transport Association (Asociația Internațională de Transport Aerian)
IATA/DGR	Dangerous Goods Regulations (DGR) for the air transport (IATA) (Reglementări privind Mărfurile Periculoase pentru transportul aerian)

Ferrocid 8583

Numărul versiunii: Vers. 8.0
Înlocuiește versiunea din: 21.01.2021 (Vers. 7)

Revizuire: 31.03.2021

<i>Abr.</i>	<i>Descrieri ale abrevierilor utilizate</i>
IMDG	International Maritime Dangerous Goods Code (Codul maritim internațional pentru mărfuri periculoase)
LC50	Lethal Concentration 50 % (concentrație letală 50 %): LC50 corespunde concentrației unei substanțe testate care produce o letalitate de 50 % într-un interval de timp specificat
LD50	Lethal Dose 50 % (doză letală 50 %): DLx corespunde dozei unei substanțe testate care produce o letalitate de 50 % într-un interval de timp specificat
log KOW	n-Octanol/apă
MARPOL	Convenția internațională pentru prevenirea poluării de către nave (abr. de la „Marine Pollutant”)
NLP	No-Longer Polymer (ex-polimer)
Nr. CE	Inventarul CE (EINECS, ELINCS și NLP-list) este sursa numărului CE, format din șapte cifre, un identificator al substanțelor disponibile pe piață în UE (Uniunea Europeană)
Nr. index	Numărul index reprezintă codul de identificare alocat substanței în partea 3 din anexa VI la Regulamentul (CE) nr. 1272/2008
OACI	International Civil Aviation Organization (Organizația Internațională de Aviație Civilă)
Ox. Sol.	Solid oxidant
PBT	Persistent, bioacumulativ și toxic
REACH	Registration, Evaluation, Authorisation and Restriction of Chemicals (Înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice)
RID	Règlement concernant le transport International ferroviaire des marchandises Dangereuses (Regulamentul privind transportul internațional feroviar al mărfurilor periculoase)
Skin Corr.	Corosiv pentru piele
Skin Irrit.	Iritant pentru piele
Skin Sens.	Sensibilizarea pielii
SVHC	Substance of Very High Concern (substanță care prezintă motive de îngrijorare deosebită)
vPvB	Very Persistent and very Bioaccumulative (foarte persistent și foarte bioacumulativ)

Trimiteri către literatura de specialitate și către sursele de date

Regulamentul (CE) Nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. Regulamentul (CE) nr. 1907/2006 (REACH), modificat prin 2015/830/UE. ECHA: Agenția Europeană pentru Produse Chimice, <http://echa.europa.eu/>.

Transportul rutier, feroviar și pe căi navigabile interioare al mărfurilor periculoase (ADR/RID/ADN). Codul maritim internațional pentru mărfuri periculoase (IMDG). Dangerous Goods Regulations (DGR) for the air transport (IATA) (Reglementări privind Mărfurile Periculoase pentru transportul aerian).

Procedura de clasificare

Proprietățile fizice și chimice: Clasificarea este bazată pe amestecul testat.
Pericolele pentru sănătate, Pericole pentru mediul înconjurător: Metoda pentru clasificarea amestecului se bazează pe ingredientele amestecului (formula de aditivitate).

Ferrocid 8583

Lista frazelor relevante (codul și textul întreg așa cum figurează în capitolul 2 și 3)

<i>Cod</i>	<i>Text</i>
H272	Poate agrava un incendiu; oxidant.
H301	Toxic în caz de înghițire.
H310	Mortal în contact cu pielea.
H314	Provoacă arsuri grave ale pielii și lezarea ochilor.
H317	Poate provoca o reacție alergică a pielii.
H318	Provoacă leziuni oculare grave.
H330	Mortal în caz de inhalare.
H400	Foarte toxic pentru mediul acvatic.
H410	Foarte toxic pentru mediul acvatic cu efecte pe termen lung.
H411	Toxic pentru mediul acvatic cu efecte pe termen lung.

		Sensib. Cutanat 1 H317: Poate provoca o reacție alergică a pielii.
		Iritant ocular 2 H319: Provoacă o iritare gravă a ochilor.
		Toxicitate acută inhalatorie 4 H332: Nociv în caz de inhalare.
Fraze de precauție:		P261: Evitați să inspirați praful/fumul/gazul/ceța/vaporii/spray-ul. P270: A nu mânca, bea sau fuma în timpul utilizării produsului P273: Evitați dispersarea în mediu. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.
Eliminarea:		P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.
Etichetarea conform Directivei 67/548/CEE (DPP) , a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		Xn – Nociv R43: Poate provoca sensibilizare în contact cu pielea
		R20/22: Nociv în caz de inhalare și înghițire
		Xi - Iritant R36/38: Iritant pentru ochi și pentru piele.
Sfaturi de siguranță::		S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S36/37: Purtați echipament de protecție și mănuși corespunzătoare.
Eliminarea:		S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Dacă respirația este neregulată sau a încetat, faceți respirație artificială. În caz de inhalare, adresați-vă imediat unui medic și arătați-i ambalajul sau eticheta.
După contactul cu pielea:	Scoateți imediat toate hainele contaminate. Zone ale corpului care au venit în contact sau sunt doar suspectate de a fi venit în contact cu produsul, trebuie clătite imediat cu multă apă și, eventual, cu săpun. Spălați bine corpul.
După contactul cu ochii:	După contactul cu ochii, clătiți cu apă, cu pleoapele deschise pentru o perioadă suficientă de timp, apoi adresați-vă imediat unui medic oftalmolog. Protejați ochiul care nu este afectat.
După înghițire:	Cereți sfatul medical imediat.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	Nu sunt disponibile.
----------	----------------------

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

**- AVADES 100 -**

Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	- - -

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	Apă, pulbere uscată, spumă, dioxid de carbon (CO ₂)
Mijloace de stingere necorespunzătoare:	Niciunul în mod special.
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu sunt disponibile.
Echipamente speciale de stingere a incendiilor	Colectați separat apa contaminată utilizată pentru a stinge focul. Nu permiteți deversarea în sistemul de canalizare. Dacă posibil în ceea ce privește siguranța, îndepărtați imediat containerele intacte din zona de pericol imediat

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	Purtați echipament individual de protecție. Purtați aparat respirator adecvat dacă este necesar.
Proceduri de urgență:	Îndepărtați persoanele care nu poartă echipament corespunzător. Furnizați și asigurați o ventilație adecvată

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	Utilizați material absorbant, organic, nisip.
Metode de limitare a poluarii	Nu permiteți infiltrarea în sol / subsol. Nu permiteți infiltrarea în apele de suprafață sau în sistemul de canalizare. După colectare, spălați zona cu apă
Informații suplimentare:	Colectați separat apa contaminată și se va elimina în conformitate cu reglementările în vigoare.

7. MANIPULARE ȘI DEPOZITARE**7.1. Precauții pentru manipularea în condiții de securitate**

Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu pielea și ochii, evitați inhalarea de vapori. Utilizați sistemul de ventilație localizat.
--	--

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	Depozitați în locuri răcoroase și bine ventilate, la distanță de surse de căldură, scântei și alte surse de aprindere.
Specificațiile zonei de depozitare:	Zone bine ventilate
Specificațiile recipientilor:	Folosiți containere / canistre din metal sau PVC.
Incompatibilități:	Acizi

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Inhibitor de coroziune pentru fluide de foraj
-----------------------------	---

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ**8.1. Parametri de control**

Amestec	
TLV _{Celing} :	- - -

TLV _{STEL} :	---	
Limita biologică:	---	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare	Asigurați ventilație adecvată	
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.	Spațiu ventilat	
Protecția individuală	Respiratorie:	Echipament adecvat de protecție respiratorie.
	Ochi	Ochelari de protecție
	Maini	Mănuși de protecție - PVC, neopren sau cauciuc
	Corp	Echipament de protecție
8.3. Controlul expunerii mediului		
Variante de expunere	---	

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid
Aspect:	Lichid limpede de la incolor la galben deschis
Culoare:	De la incolor la galben deschis
Miros:	Inodor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 20 °C:	10-11
Punct de topire:	N.a.
Punct de fierbere:	>100°C
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	> 100 °C
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	De la 1,09 la 1,11 gr/cm ³
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Solubil
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.

Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	

**- AVADES 100 -**

Condiții care trebuie evitate:	Stabil în condiții normale de utilizare
10.2. Stabilitate chimică	
Materiale incompatibile:	N.a.
Posibilitatea de reacții periculoase:	Reacții cu acizii
10.3. Produși de descompunere periculoși	
Alte informații:	N.a.

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea substanței	<i>Alfa, alfa ', " alfa-trimetil-1,3,5-triazin-1, 3,5 (2H, 4H, 6H)-tri-etanol CAS No. 25254-50-6</i>
Toxicitate orală acută:	DL50 (Șobolan): 803 – 1151 mg/kg
Toxicitate inhalatorie acută:	DL50 (Șobolan) 4h: 2 mg/l
Toxicitate cutanată acută:	DL50 (Șobolan): > 2000 mg/kg
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substanța	<i>Alfa, alfa ', " alfa-trimetil-1,3,5-triazin-1, 3,5 (2H, 4H, 6H)-tri-etanol CAS No. 25254-50-6</i>
Toxicitate în apă:	LC50 (Pești) 96 h: > 100 mg/l EC50 (Dafnii) 48 h: 29 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potenția Bioacumulativ	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA

**- AVADES 100 -**

13.1. Metode de eliminare a produsului	
Sfaturi:	Recuperați produsul, dacă este posibil. Produs periculos: a se elimina în conformitate cu reglementările în vigoare.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Ambalajele contaminate trebuie să fie clasificate ca deșeuri periculoase. Recuperați ambalajele, dacă este posibil. Deșeuri periculoase: a se elimina în conformitate cu reglementările în vigoare.
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr. 1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie

**- AVADES 100 -**

informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații
Fraze de pericol și de risc utilizate în secțiunile anterioare
H302 - Nociv în caz de înghițire H315 : Provoacă iritarea pielii. H317 : Poate provoca o reacție alergică a pielii. H319 : Provoacă o iritare gravă a ochilor. H332 : Nociv în caz de inhalare.
R43 : Poate provoca sensibilizare în contact cu pielea. R20/22 : Nociv în caz de inhalare și înghițire R36/38 : Iritant pentru ochi și pentru piele.
Fraze de precauție și de siguranță utilizate în secțiunile anterioare
P261 : Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul. P270 : A nu mânca, bea sau fuma în timpul utilizării produsului P273 : Evitați dispersarea în mediu. P280 : Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P305 + P351 + P338 : ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți. P501 : Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.
S26 : În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S36/37 : Purtați echipament de protecție și mănuși corespunzătoare. S60 : Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
<i>Indicarea de pericole specifice pentru om și mediul înconjurător:</i>		
SUBSTANȚA / AMESTECUL NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		

**- AVAGEL -**

Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:		
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful. S24/25: Evitați contactul cu pielea și ochii.	
Eliminarea:	---	
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	In conformitate cu urmatorul tabel:					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Bentonita (Smectite)	1302-78-9	215-108-5	100 %	---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Nu sunt necesare măsuri speciale
După contactul cu pielea:	Nu sunt necesare măsuri speciale
După contactul cu ochii:	Spălați bine cu apă. Dacă iritația persistă, adresați-vă unui medic.
După înghițire:	Nu sunt necesare măsuri speciale
Alte informații:	---
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	

**- AVAGEL -**

Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	---

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu, respectați următoarele instrucțiuni.
Mijloace de stingere corespunzătoare:	Nu este inflamabil și nici exploziv. Produsul nu este combustibil. Utilizați: apă, spumă, pulbere sau CO ₂ .
Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu este considerat a prezenta un pericol de explozie
Echipamente speciale de stingere a incendiilor	Purtați echipament de protecție PPE adecvat și aparat respirator dacă este necesar.
Recomandări destinate pompierilor:	N.a.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	În caz de expunere prelungită sau nivel ridicat de praf suspendat purtați o protecție respiratorie, în conformitate cu legislația națională
Proceduri de urgență:	N.a.

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	Orice măsuri speciale sunt necesare
Metode de limitare a poluării	Evitați a matura uscat, pulverizați apa sau folosiți un sistem vidat pentru a preveni formarea de praf. Rețineți că bentonita poate fi alunecoasă în condiții de umiditate
Informații suplimentare:	N.a.

7. MANIPULARE ȘI DEPOZITARE**7.1. Precauții pentru manipularea în condiții de securitate**

Precauții pentru manipulare în condiții de securitate:	Evitați generarea de praf. Asigurați ventilație adecvată. În caz de ventilație insuficientă, purtați echipament de protecție respiratorie adecvat.
--	--

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	Orice măsuri speciale sunt necesare. Asigurați ventilație adecvată și depozitați prevenind deteriorarea accidentală. A se feri de umiditate
Specificațiile zonei de depozitare:	Depozitați într-un loc răcoros, uscat și bine ventilat
Specificațiile recipientilor:	Pastrati containerele bine închise.
Incompatibilități:	N.a.

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Viscozifiant și agent de suspensie pentru fluidele de fora
-----------------------------	--

**- AVAGEL -**

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Substanța		
TLV _{Ceiling} :		- - -
TLV _{TWA} :		Praf (inhalabil): 3,0 mg / m ³ Praf (respirabil): 10 mg / m ³
TLV _{STEL} :		- - -
Limita biologică		- - -
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Asigurați ventilație și filtrare adecvată la locurile de muncă unde poate fi generat praf. Spălați-vă mâinile înainte de pauze și la sfârșitul zilei de lucru. Scoateți și spălați îmbrăcămintea contaminată,
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.		Vențilație generală recomandată.
Protecția individuală	Respiratorie:	În caz de expunere prelungită la praf purtați echipament de protecție respiratorie individual în conformitate cu legislația națională
	Ochi	Ochelari de protecție recomandați – in mod normal nu sunt necesari.
	Maini	Purtati mănuși de protecție – in mod normal nu sunt necesare
	Corp	Purtati îmbrăcămintea de protecție PPE adecvată
8.3. Controlul expunerii mediului		
Variante de expunere		- - -

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Raw, pudră, granule, pelete, suspendate
Aspect:	Raw, pudră, granule, pelete, suspendate
Culoare:	Variabilă de la alb la gri, verde, galben, roșu, maro
Miros:	Inodor
Prag olfactiv:	Niciunul
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 20 °C:	N.a.
Punct de topire:	> 450°C
Punct de fierbere:	Nu se aplică
Punct de aprindere:	Nu este inflamabil
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	2,6 g/cm ³ la 20°C
Densitatea aparentă (20°C):	0,9 – 1,4 g/ml
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.

**- AVAGEL -**

Solubilitate în apă (20°C):	< 0,9 mg/l la 20 °C
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Chimic stabil
10.2. Stabilitate chimică	
Materiale incompatibile:	Fara incompatibilitati speciale
Posibilitatea de reacții periculoase:	N.a.
10.3. Produși de descompunere periculoși	
Alte informații:	Nu sunt produse de descompunere periculoase

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Substanța	<i>Bentonite CAS No.1302-78-9</i>
Toxicitate orală acută:	LD50 (Sobolan): > 2000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Sobolan): > 5,27 mg/l
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	Nu este iritant pentru piele
Ochi:	Nu este iritant pentru ochi
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	Nu este sensibilizant pentru piele
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	LC50 (Pesti) 96h: 2800-3200 mg /l EC50 (Daphnia magna) 48h:> 100 mg /l EC50 (Alge) 72h:> 100 mg /l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Nu se aplică pentru substanțele anorganice
12.3. Potențial de Bioacumulare	
Alte informații:	Nu se aplică pentru substanțele anorganice
12.4. Mobilitate în sol	
Alte informații:	Bentonita este aproape insolubila și, prin urmare, are o mobilitate scăzută în sol
12.5. Resultatele evaluării PBT și vPvB	

**- AVAGEL -**

PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	Nici un alt efecte advers nu a fost identificat. Conform criteriilor din Sistemul european de clasificare și etichetare a substanțelor, nu este nevoie a fi clasificat ca fiind periculos pentru mediu

13. CONSIDERAȚII PRIVIND ELIMINAREA

13.1. Metode de eliminare a produsului	
Sfaturi:	Poate fi depozitate în conformitate cu reglementările locale. Materialul trebuie să fie îngropat pentru a preveni eliberarea de praf respirabil. Reciclarea ar trebui să fie preferată în locul eliminării.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Niciunul în mod special. În orice caz, trebuie evitată formarea de reziduuri de praf din ambalaj și să se asigure protecția adecvată garantată lucrătorilor. Reciclarea și eliminarea ambalajelor trebuie să fie făcută de o companie certificată pentru managementul adecvat al deșeurilor.
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT

14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE

15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	

**- AVAGEL -**

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)
Regulament (CE) nr.1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase; HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase; REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006. Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008). REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH). Regulament 552/2009 de modificare a anexei XVII din Regulamentul (CE) nr.1907/2006 – REACH privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase HG 735/2006 privind limitarea emisiei de compuși organici volatili. HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații. Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă. REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei. HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006. O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.
Legislația privind eliminarea deșeurilor: Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

ACGIH - Threshold Limit Values - 2009 edition

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de precauție/siguranță utilizate în secțiunile anterioare**

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S22: A nu se inspira praful.

S24/25: Evitați contactul cu pielea și ochii.

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
<i>Indicarea de pericole specifice pentru om și mediul înconjurător:</i>		
SUBSTANȚA / AMESTECUL NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		

**- AVAGUM -**

Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:	P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful. S37/39: Purtați echipament de protecție și mănuși corespunzatoare.	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul următor					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Polizaharid natural	9000-30-0	232-536-8	---	---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Obțineți asistență medicală.
După contactul cu pielea:	Îndepărtați îmbrăcămintea contaminată. Clătiți cu apă. Dacă persistă iritarea pielii, solicitați asistență medicală
După contactul cu ochii:	Irigați ușor cu apă curată. Dacă iritația persistă, solicitați asistență medicală
După înghițire:	Se va clăti imediat și în mod repetat gura cu apă. Dacă este necesar solicitați asistență medicală

**- AVAGUM -**

Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu urmați următoarele reguli
Mijloace de stingere corespunzătoare:	Apă, spumă, pulbere, CO2
Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Se pot elibera vapori nocivi
Echipamente speciale de stingere a incendiilor	În caz de incendiu, purtați aparat de respirat și îmbrăcăminte de protecție
Altele	N.a.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Nu respirați praful
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Păstrați ventilația în mediul de lucru
Metode de limitare a poluării	Îndepărtați cu o mătură, fărăș sau sistem de aspirare vidată. Produsul umed va forma suprafețe alunecoase.
Informații suplimentare:	N.a.

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați generarea de praf
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Depozitați într-un loc răcoros și uscat
Specificațiile zonei de depozitare:	Depozitați în zone bine ventilate
Specificațiile recipientilor:	N.a.
Incompatibilități:	N.a.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Viscozifiant pentru fluidele de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control (Limite de expunere)	
Amestec	
TLV _{Ceiling} :	---
TLV _{TWA} :	---
TLV _{STEL} :	---

**- AVAGUM -**

Limita biologică:		- - -
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilație generală
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Asigurați ventilație adecvată
Protecția individuală	Respiratorie:	Mască pentru praf
	Ochi	Ochelari de protecție
	Maini	Mănuși de protecție și îmbrăcăminte de protecție recomandate
	Corp	Îmbrăcăminte de protecție
8.3. Controlul expunerii mediului		
Variante de expunere		N.a.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Pulbere
Aspect:	Pulbere fină
Culoare:	Alb ivoriu
Miros:	Inodor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH în soluție 1%:	7.0 – 7.5
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	>280°C
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	N.a.
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	1500 – 3000 cps
9.3. Alte informații	
Alte informații:	N.a.

**- AVAGUM -**

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Niciuna
10.2. Stabilitate chimică	
Materiale incompatibile:	Niciunul
Posibilitatea de reacții periculoase:	N.a.
10.3. Produși de descompunere periculoși	
Alte informații:	N.a.

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea amestecului	
Toxicitate orală acută:	N.a.
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	Nu există efecte nocive
Inhalare:	Nu există efecte nocive
11.5. Sensibilitate	
Piele:	Nici un efect advers așteptat
Ochi:	Nici un efect advers așteptat

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

**- AVAGUM -**

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Manipulați în conformitate cu reglementările locale și naționale
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Manipulați în conformitate cu reglementările locale și naționale

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr. 1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase; HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase; REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006. Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea	

**- AVAGUM -**

substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr.1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solvenților organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.1. Principalele surse bibliografice

ECDIN - Environmental Chemicals Data and Information Network - Joint Research Centre, Commission of the European Communities

SAX's DANGEROUS PROPERTIES OF INDUSTRIAL MATERIALS - Eight Edition – Van Nostrand Reinold

Istituto Superiore di Sanità - Inventario Nazionale Sostanze Chimiche

ACGIH - Threshold Limit Values - 2009 edition

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

**- AVAGUM -****Alte informații**

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de precauție/siguranță utilizate în secțiunile anterioare**

P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P280: Purtați mănuși de protecție.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S22: A nu se inspira praful.

S37/39: Purtați echipament de protecție și mănuși corespunzătoare.

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	In conformitate cu tabelul următor					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
ist humic (Leonardite)	129521-66-0	---	---	---	---	---
Siliciu cristalin	14808-60-7	238-878-4	---	STOT RE 1	 GHS08	H372
	Notă: Acest produs conține o cantitate mai mica de 1% de quart respirabil. Cuarțul respirabil este clasificat STOT RE 1					

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Solicitați asistenta medicală
După contactul cu pielea:	Scoateți hainele contaminate. Spălați partea/partile contaminate cu apă din

**- AVALIG NE -**

	abundenta.
După contactul cu ochii:	Clătiti bine cu apă. Dacă iritatia persista, adresați-vă unui medic.
După înghițire:	Clătiti imediat gura bine cu apă si de mai multe ori. Este necesar sa solicitati asistenta medicala
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât si întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu, respectați urmatoarele instrucțiuni.
Mijloace de stingere corespunzătoare:	N.a.
Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	N.a.
Echipamente speciale de stingere a incendiilor	În caz de incendiu, utilizați masca de praf și haine de protecție
Recomandări destinate pompierilor:	N.a.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	Purtați echipament protecție corespunzător, PPE.
Proceduri de urgență:	Nu respirați praful

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	N.a.
Metode de limitare a poluarii	Îndepărtați dacă este posibil, cu un sistem de vidare pentru a preveni generarea de praf
Informații suplimentare:	N.a.

7. MANIPULARE ȘI DEPOZITARE**7.1. Precauții pentru manipularea în condiții de securitate**

Precauții pentru manipulare în condiții de securitate:	Evitați generarea de praf. Nu respirați praful.
--	---

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	Depozitați în zone racoroase și uscate.
Specificațiile zonei de depozitare:	N.a.
Specificațiile recipientilor:	N.a.
Incompatibilități:	N.a.

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Reducator de filtrat pentru fluidele de foraj pe baza de apă
-----------------------------	--

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Amestec	Siliciu cristalin CAS No. 14808-60-7	
TLV _{Celing} :	- - -	
TLV _{TWA} :	- - -	
TLV _{STEL} :	Dioxid de siliciu cristalin (fracțiune respirabila) TLV-TWA = 0,025 mg / m³ Potential carcinogen uman A2: silicoza, fibroză, și cancer pulmonar. Substanț cu o expunere comunitara limitată la locul de muncă	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Stație de spălare ochi in apropiere.
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Ventilatie fortata.
Protecția individuală	Respiratorie:	Masca de praf
	Ochi	Ochelari de protecție
	Maini	Mănu și haine de protecție recomandate
	Corp	Imbrăcămintе de protecție.
8.3. Controlul expunerii mediului		
Variante de expunere		N.a.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Solid
Aspect:	Negricios / maro
Culoare:	Incolor
Miros:	Inodor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 20 °C:	3.5 - 4.0
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	790 Kg/m ³
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	N.a.
Coeficientul de distribuție (n-octanol):	N.a.

**- AVALIG NE -**

Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Produsul este stabil în condițiile mediului înconjurător
10.2. Stabilitate chimică	
Materiale incompatibile:	Non-reactive
Posibilitatea de reacții periculoase:	Niciunul
10.3. Producși de descompunere periculoși	
Alte informații:	N.a.

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea amestecului	
Toxicitate orală acută:	Nu sunt date disponibile
Toxicitate inhalatorie acută:	Nu sunt date disponibile
Toxicitate cutanată acută:	Nu sunt date disponibile
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	Nici un efect advers așteptat
Ochi:	Nici un efect advers așteptat

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

**- AVALIG NE -****13. CONSIDERAȚII PRIVIND ELIMINAREA****13.1. Metode de eliminare a produsului**

Sfaturi:	Consultati un centru de colectare autorizat pentru eliminare în conformitate cu reglementările locale.
Cod de deșeu:	N.a.

13.2. Metode de eliminare a ambalajului

Sfaturi:	N.a.
Alte recomandări:	Manipulati în conformitate cu reglementările locale și naționale

14. INFORMAȚII REFERITOARE LA TRANSPORT**14.1. Transport rutier / feroviar (ADR / RID)**

Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.

14.2. Transport Maritim (IMDG)

Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.

14.3. Transport Aerian (ICAO-TI și IATA-DGR)

Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.

14.4. Transport în vrac

Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE**15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr.1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

**- AVALIG NE -****Alte informații**

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H372: Poate provoca afectări ale organelor în caz de expunere repetată sau prelungită.

Fraze de precauție/siguranță utilizate în secțiunile anterioare

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

S22: A nu se inspira praful.

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat și țineți-o la căldură și în stare de repaus. Consultați medicul dumneavoastră dacă nu vă simțiți bine
După contactul cu pielea:	Clătiți cu apă și săpun
După contactul cu ochii:	Irigați cu apă curată din abundență și consultați medicul
După înghițire:	Nu induceți voma. Solicitați imediat medicul
Alte informații:	---
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	---
5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu urmați următoarele instrucțiuni
Mijloace de stingere corespunzătoare:	Apă, CO2
Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gazele de explozie și de ardere
Echipamente speciale de stingere a incendiilor	Utilizați aparat de respirație și îmbrăcăminte de protecție. Colectați separat apa contaminată folosită pentru a stinge focul. Nu evacuați în sistemul de canalizare. Dacă este posibil în ceea ce privește siguranța, mutați ambalajele nedeteriorate din zona de pericol imediat
Altele	---
6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament de protecție (mănuși, ochelari de protecție și îmbrăcăminte)
Proceduri de urgență:	Eliminați persoanele neprotejate. Asigurați o ventilație adecvată
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Material adecvat pentru colectare: materiale absorbante, organice, nisip
Metode de limitare a poluării	Spălați cu apă din abundență
Informații suplimentare:	Nu permiteți infiltrarea în sol / subsol. Preveniți scurgerea în apele de suprafață sau în sistemul de canalizare. Colectați apa de spălare contaminată și eliminați-o. În cazul accesului în cursurile de apă, sol sau în sistemul de canalizare, informați autoritățile responsabile
7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu pielea și ochii, inhalarea de vapori și aburi. Când lucrați cu acest produs, nu mâncați sau beți
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	

**- AVASIL -**

Condiții de depozitare:	Depozitați în spații racoroase și bine ventilate.
Specificațiile zonei de depozitare:	Zone bine ventilate
Specificațiile recipientelor:	Pastrati recipientele/containerele închise ermetic
Incompatibilități:	N.a.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Antispumant pentru fluide de foraj/saramura

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Amestec		
TLV _{Ceiling} :		---
TLV _{TWA} :		---
TLV _{STEL} :		---
Limita biologică		---
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilație generală
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.		Recomandată ventilație
Protecția individuală	Respiratorie:	Nu este necesar în condiții de utilizare normală
	Ochi	Ochelari de protecție recomandați
	Maini	Mănuși de protecție
	Corp	Aceasta nu este necesar să se adopte măsuri speciale de precauție în caz de utilizare normală
8.3. Controlul expunerii mediului		
Variante de expunere		Niciuna

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid alb lăptos
Aspect:	Lichid alb lăptos
Culoare:	Alba
Miros:	Caracteristic
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 20 °C:	5,5 +/- 1
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C	N.a.

**- AVASIL -**

Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	0,99+/- 0,03 gr/cm ³
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	N.a.
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil în condiții normale
10.2. Stabilitate chimică	
Materiale incompatibile:	Niciunul
Posibilitatea de reacții periculoase:	Niciuna
10.3. Produși de descompunere periculoși	
Alte informații:	Niciuna

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Substanța	Amestec de uleiuri siliconice CAS No.63148-62-9
Toxicitate orală acută:	LD50 (Șobolan): 5000 mg/kg
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.

**- AVASIL -**

12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	Utilizați în conformitate cu bunele practici de lucru, evitând eliminarea în mediul înconjurător

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Recuperați, dacă este posibil. Manipulați în conformitate cu reglementările la nivel local și național
Cod de deșeu:	N.a.
13.1. Metode de eliminare a produsului	
Sfaturi:	N.a.
Alte recomandări:	Manipulați în conformitate cu reglementările la nivel local și național

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnici și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	

**- AVASIL -****Regulament (CE) nr.1907/2006 (REACH)**

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date

**- AVASIL -**

de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale. Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

Fraze de siguranță utilizate în secțiunile anterioare

S22: A nu se inspira praful.

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
	GHS07	Toxicitate orală acută 4 H302 - Nociv în caz de înghițire
	GHS05	Afectare oculară 1 H318 – Provoacă leziuni oculare grave.
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
	Xn - nociv	R22: Nociv în caz de înghițire
	Xi - iritant	R41: Risc de leziuni oculare grave
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:		
	GHS07	GHS05
	Toxicitate acută orală 4 H302 - Nociv în caz de înghițire Afectare oculară 1 H318 – Provoacă leziuni oculare grave.	
Fraze de precauție:	P264: Spălați-vă cu atenție după utilizare. P270: A nu se mânca, bea sau fuma în timpul utilizării produsului. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P310: Sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic. P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clățiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clățiți.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		Xn – Nociv R22: Nociv în caz de înghițire
		Xi – Iritant R41: Risc de leziuni oculare grave.
Sfaturi de siguranță::	S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S39:Purtati protectie a feței/ochilor S24/25: Evitați contactul cu pielea și ochii. S36/37: Purtați echipament de protecție și mănuși corespunzătoare.	
Eliminarea:	S60 Acest produs și ambalajul (recipientul) său se vor elimina ca un deșeu periculos.	
2.3. Alte pericole

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. În caz de inhalare, adresați-vă unui medic imediat și arătați-i ambalajul sau eticheta.
După contactul cu pielea:	Scoateți imediat toate hainele contaminate. Spălați-vă imediat cu apă și săpun și clătiți temeinic părțile expuse. Duceți imediat persoana la spital. Adresați-vă unui medic.
După contactul cu ochii:	După contactul cu ochii, clătiți cu apă, cu pleoapele deschise pentru o perioadă suficientă de timp, apoi adresați-vă imediat unui medic oftalmolog. Protejați ochiul care nu este afectat.
După înghițire:	Beți multă apă și respirați aer curat. NU provocați vomă. Nu administrați nimic la persoane inconștiente. Solicitați imediat sfatul unui medic.
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Cauzează arsuri grave. Risc de orbire.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.
5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	Utilizați: Apă, CO ₂
Mijloace de stingere necorespunzătoare:	Niciuna
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gaze de explozie și de ardere.
Echipamente speciale de stingere a incendiilor	Purtați aparatul respirator și echipamentul de protecție completă a corpului (combinezon).
Recomandări destinate pompierilor:	Folosiți aparatul respirator adecvat. Colectați separat apa contaminată, folosiți pentru a stinge focul. Nu se va evacua în sistemul de canalizare. Dacă este posibil, în ceea ce privește siguranța, îndepărtați de la pericolul imediat ambalajele nedeteriorate.
6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezonul)
Proceduri de urgență:	Persoanele care nu sunt echipate vor fi ținute la distanță. Furnizați și asigurați o ventilație adecvată
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Rețineți apa contaminată în urma spălării și eliminați-o. În caz de scurgeri de gaze sau de patrundere în cursurile de apă, sol sau în sistemul de canalizare, informați autoritățile responsabile. Material adecvat pentru absorbție: materiale absorbante, organice, nisip
Metode de limitare a poluarii	Spălați-vă cu apă din abundență

**- AVAWASH WBM-**

Informații suplimentare:	Nu permiteți infiltrarea în sol / subsol. Preveniți scurgerea în apele de suprafață sau în sistemul de canalizare.
--------------------------	--

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu pielea și ochii, inhalarea de vapori și aburi. A nu se folosi recipientul gol înainte de a fi curățat. Înainte de operațiunile de transfer, să vă asigurați că recipientele nu conțin reziduuri materiale incompatibile. Hainele contaminate trebuie să fie schimbate înainte de a intra în locurile unde se servește masa. nu se vor consuma alimente și / sau băuturi în timpul manipularii
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați ambalajul închis ermetic. A se păstra la distanță de alimente, băuturi și hrană pentru animale.
Specificațiile zonei de depozitare:	Zone bine ventilate
Specificațiile recipientilor:	Material adecvat de ambalare: oțel inox, polietilen (PE). Utilizați saci multistrat cu partea internă din PE. Material de ambalare neadecvate: aliaje de aluminiu și zinc .
Incompatibilități:	Niciuna
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent de curățare pentru fluide de foraj pe bază de apă (WBM)

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control		
Amestec

Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE**15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului

**- AVAWASH WBM-**

(CE) nr. 1907/2006.
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)
Regulament (CE) nr.1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase; HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase; REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006. Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008). REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH). Regulament 552/2009 de modificare a anexei XVII din Regulamentul (CE) nr.1907/2006 – REACH privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase HG 735/2006 privind limitarea emisiei de compuși organici volatili. HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații. Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă. REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei. HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006. O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.
Legislația privind eliminarea deșeurilor: Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații
Fraze de pericol utilizate în secțiunile anterioare
H302: Nociv în caz de înghițire
H318: Provoacă leziuni oculare grave
R22: Nociv în caz de înghițire
R41: Risc de leziuni oculare grave
Fraze de precauție utilizate în secțiunile anterioare
P264: Spălați-vă cu atenție după utilizare.
P270: A nu se mânca, bea sau fuma în timpul utilizării produsului.
P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței.
P310: Sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic.
P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.
P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.
S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.
S39: Purtați protecție a feței/ochilor
S24/25: Evitați contactul cu pielea și ochii.
S36/37: Purtați echipament de protecție și mănuși corespunzătoare.
S60: Acest produs și ambalajul (recipientul) său se vor elimina ca un deșeu periculos.

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
	GHS05	Cor piele 1A H 314: Provoacă arsuri grave ale pielii și lezarea ochilor.
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
	C - Coroziv	R 35: Provoacă arsuri grave
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	 GHS05	Cor piele 1A H 314: Provoacă arsuri grave ale pielii și lezarea ochilor.
Fraze de precauție:	P260: Nu respirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P363: Spălați îmbrăcăminte utilizată înainte de reutilizare. P405: A se depozita sub cheie. P304 + P340: ÎN CAZ DE INHALARE: transportați victima la aer liber și țineți-o în stare de repaus, într-o poziție confortabilă pentru respirație. P301 + P330 + P331: ÎN CAZ DE ÎNGHIȚIRE: clătiți gura. NU provocați vomă. P303 + P361 + P353: ÎN CAZ DE CONTACT CU PIELEA (sau părul): scoateți imediat toată îmbrăcăminte contaminată. Clătiți pielea cu apă/faceți duș. P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP) , a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		C - Coroziv R35: Provoaca arsuri grave
Sfaturi de siguranță::	S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S 45: In caz de accident sau simptome de boala, consultati imediat medical. (Daca este posibil, l se va arata eticheta). S 1/2: Pastrati incuiat si nu lasati la indemana copiilor. S 37/39: Purtati echipament de protectie si manausi corespunzatoare.	
Eliminarea:	S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.	
2.3. Alte pericole		
Produce reacții exotermice puternice în contact cu apa și acizi		

**- CAUSTIC SODA -**

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Substanța					
Conținut:	În conformitate cu tabelul de mai jos					
Formula moleculară:	---					
Number ONU	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Hidroxid de sodiu REACH No. 05- 2114101567-55-XXXX	1310-73-2	215-185-5	>98%	Skin Corr. 1A	 GHS05	H314
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Hidroxid de sodiu	1310-73-2	215-185-5	>98%	C - coroziv		R35

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateti persoana afectata la aer curat. Cereți sfatul medicului dupa expunere semnificativa.
După contactul cu pielea:	Se vor scoate imediat toate hainele contaminate. Spălați-vă imediat cu apă și săpun și clătiți temeinic părțile expuse.
După contactul cu ochii:	După contactul cu ochii, clătiti cu apă, cu pleoapele deschise pentru o perioadă suficientă de timp, apoi adresați-vă imediat unui medic oftalmolog. Protejați ochiul care nu este afectat.
După înghițire:	Beți multă apă și respirați aer curat. Nu provocați voma. Cereți sfatul medicului imediat.
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât si întârziate.	
Simptome	Cauzeaza arsuri grave. Risc de orbire
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

**- CAUSTIC SODA -**

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	CO ₂ , nisip, pulbere pentru stingerea incendiilor
Mijloace de stingere necorespunzătoare:	Nu utilizați: apă.
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Prin ardere se pot elibera vapori periculoși
Echipamente speciale de stingere a incendiilor	Purtați aparatul respirator și echipamentul de protecție completă a corpului (combinezon).
6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezon)
Proceduri de urgență:	Îndepărtați persoanele care nu sunt echipate corespunzător. Furnizați și asigurați o ventilație adecvată
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Folosiți media absorbant, organic, nisip
Metode de limitare a poluarii	Nu permiteți infiltrarea în sol / subsol. Nu permiteți infiltrarea în apele de suprafață sau în sistemul de canalizare. După colectare, spălați zona cu apă. Utilizați un agent de neutralizare.
Informații suplimentare:	Se creează suprafețe alunecoase cu apă. Colectați apa de spălare contaminată și eliminați-o conform regulamentelor. Aplicați etichete dedicate, corespunzătoare pe containere.
7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Nu mâncați și nu beți în timpul lucrului. Evitați contactul cu pielea și ochii, inhalarea de vapori și praf. Utilizați sistemul de ventilație localizată
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Depozitați în zone reci, uscate și bine ventilate, la distanță de surse de căldură. Etaje special concepute anticoroziv.
Specificațiile zonei de depozitare:	Zone bine ventilate. Nu se va depozita împreună cu agenți reducători, compuși ai metalelor grele, acizi și baze
Specificațiile recipientilor:	Material adecvat de ambalare: oțel inoxidabil, polietilenă. Utilizați saci multistrat cu partea internă din PPE. Materiale de ambalare neadecvate: aluminiu și aliaje de zinc
Incompatibilități:	Acizi
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent de control al pH-ului pentru fluide de foraj pe baza de apă
8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control	
Substanța	
TLV _{Ceiling} :	2 mg/m ³
TLV _{TWA} :	---
TLV _{STEL} :	---
Limita biologică:	---

**- CAUSTIC SODA -**

8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilație generală este recomandată
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.		Ventilație forțată. Stație de spălare ochi.
Protecția individuală	Respiratorie:	Utilizați echipament adecvat de protecție respiratorie.
	Ochi	Ochelari de protecție - Nu utilizați lentile de contact - Ochelari de protecție bine închiși
	Maini	Mănuși de protecție totală
	Corp	Îmbrăcăminte de protecție a întregului corp.
8.3. Controlul expunerii mediului		
Variante de expunere		N.a.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Solid
Aspect:	Solid
Culoare:	Alb
Miros:	Inodor
Prag olfactiv:	Nu s-a determinat
9.2. Informații pentru sănătate, siguranță și mediu	
pH:	13,5 (soluție 1%)
Punct de topire:	318 °C
Punct de fierbere:	1388 °C
Punct de aprindere:	Nu se aplică
Inflamabilitate (solid, gaz):	Produsul nu este inflamabil.
Temperatura de autoaprindere:	Nu se aplică
Temperatura de descompunere:	Nu se aplică
Pericol de explozie:	Produsul nu prezintă risc de explozie.
Limita de inflamabilitate superioară:	Nu se aplică
Limita inferioară de inflamabilitate:	Nu se aplică
Presiunea de vapori:	3,5 hPa
Densitatea la 20 °C:	2,13 g/cm ³
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	420 g/l
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

**- CAUSTIC SODA -**

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Evitați crearea de praf. Evitați încălzirea și umiditatea. Evitați contactul cu acizi
10.2. Stabilitate chimică	
Materiale incompatibile:	Acizi tari, alcalii, baze, oxid de metal, metale și agenți de oxidare
Posibilitatea de reacții periculoase:	Reacții puternic exoterme cu: acizi, apa, diferite metale
10.3. Produși de descompunere periculoși	
Alte informații:	Vapori corozivi. În caz de contact cu unele metale, eliberează hidrogen
11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea Substanței	<i>Sodium hydroxide CAS No. 1310-73-2</i>
Toxicitate orală acută:	DL50 (Șobolani): 2000 mg/kg
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	Puternic caustic/coroziv foarte puternic asupra pielii și mucoaselor
Ochi:	Puternic coroziv. Poate duce la orbire.
11.4. Nocivitate	
Ingestie:	În caz de înghițire, se produce o corозиune puternică a cavității bucale și a faringelui, cu riscul de perforare al esofagului și a stomacului
Inhalare:	Materialul este extrem de distructiv pentru mucoasa și aparatul respirator superior
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.
12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	EC50 (Dafnii) 48h: > 40,4 mg/l LC50 (Pești) 96h: > 35 – 189 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potenția Bioacumulativ	
Alte informații:	Nu există bioacumulare
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	Substanța nu este considerată persistentă, bioacumulabilă sau toxică sau foarte persistentă și puternic toxică.
12.6. Alte efecte adverse	
Alte informații:	Pericol pentru apă clasa 1 (D) (Clasificarea conform listelor): puțin periculos.

**- CAUSTIC SODA -**

	<p>Efecte localizate: se poate modifica pH-ul mediului înconjurător cu riscuri pentru speciile de apă.</p> <p>Eliberarea de cantități mari în ape sau în sistemul de canalizare, poate produce o creștere a pH-ului. Un pH ridicat este dăunător pentru speciile de apă. Diluarea va reduce valoarea pH-ului. Nu evacuați în apă și sistemul de canalizare produsul care nu este diluat sau neutralizat.</p> <p>A se utiliza în conformitate cu bunele practici, nu eliberați în mediul înconjurător.</p>
--	---

13. CONSIDERAȚII PRIVIND ELIMINAREA**13.1. Metode de eliminare a produsului**

Sfaturi:	Colectați produsul/scurgerile în cazul în care este posibil. Eliminați în conformitate cu reglementările în vigoare.
Cod de deșeu:	N.a.

13.2. Metode de eliminare a ambalajului

Sfaturi:	Recuperați produsul, în cazul în care este posibil. Clasificați produsul ca fiind periculos: eliminați în conformitate cu reglementările în vigoare.
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT**14.1. Transport rutier / feroviar (ADR / RID)**

Număr ONU	1823
Norme de transport ONU	80
Clasa (clasele) de pericol pentru transport	8 (substanța corozivă)
Grupul de ambalare:	II
Denumirea oficială a transportului	1823 SODIUM HYDROXIDE, SOLID
Cod de restricție în galerie/tunel	E

14.2. Transport Maritim (IMDG)

Număr ONU	1823
Numarul EMS	F-A, S-B
Clasa (clasele) de pericol pentru transport	8 (substanță corozivă)
Grupul de ambalare:	II
Poluant marin:	NU
Denumirea oficială a transportului	1823 SODIUM HYDROXIDE, SOLID

14.3. Transport Aerian (ICAO-TI și IATA-DGR)

Număr ONU	1823
Clasa IACO/ATA	8 (substanța corozivă)
Eticheta	8 (substanța corozivă)
Grupul de ambalare:	II
Denumirea oficială a transportului	1823 SODIUM HYDROXIDE, SOLID

14.4. Transport în vrac

Anexa II a MARPOL73/78:	N.a.
Codul IBC:	N.a.

**- CAUSTIC SODA -****15. INFORMAȚII DE REGLEMENTARE****15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

**- CAUSTIC SODA -**

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut
PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioaccumulative, toxice
vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioaccumulative
TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore
TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt
TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H314: Provoacă arsuri grave ale pielii și lezarea ochilor.

R 35: Provoacă arsuri grave

Fraze de precauție utilizate în secțiunile anterioare

P260: Nu respirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței.

P363: Spălați îmbrăcămintea utilizată înainte de reutilizare.

P405: A se depozita sub cheie.

P304 + P340: ÎN CAZ DE INHALARE: transportați victima la aer liber și țineți-o în stare de repaus, într-o poziție confortabilă pentru respirație.

P301 + P330 + P331: ÎN CAZ DE ÎNGHIȚIRE: clătiți gura. NU provocați vomă.

P303 + P361 + P353: ÎN CAZ DE CONTACT CU PIELEA (sau părul): scoateți imediat toată îmbrăcămintea contaminată. Clătiți pielea cu apă/faceți duș.

P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.

S 45: În caz de accident sau simptome de boală, consultați imediat medical, (Dacă este posibil, l se va arata eticheta).

S 1/2: Pastrati incuiat si nu lasati la indemana copiilor.

S 37/39: Purtati echipament de protectie si manausi corespunzatoare.

S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul următor					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU	---					
Număr Index	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Alchene, C11-C12 [Alkenes,C11-C12] REACH No. 01-2119561658-26-XXXX	---	932-235-8	20-30%	Tox. Asp. 1	 GHS08	H304
				Irit. Oc. 2	 GHS07	H319
				Acvatic acut 1	 GHS09	H400
Izobutil ftalat [Isobutyl phthalate] REACH No. 01-2119561658-26-XXXX	84-69-5	201-553-2	<5%	Repr. 1B	 GHS08	H360
Etoxilat de alcool gras [Fatty alcohol ethoxylate]	---	---	<5%	Lez. Oc. 1	 GHS05	H318
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Alchene, C11-C12 [Alkenes,C11-C12]	---	932-235-8	20-30%	Xn - nociv		R36
				Xi - iritant		R50
				N – nociv pentru mediul inconjurator		R65
Izobutil ftalat [Isobutyl phthalate]	84-69-5	201-553-2	<5%	Repr. Cat. 2,3		R61
						R62
Etoxilat de alcool gras [Fatty alcohol ethoxylate]	---	---	<5%	Xi - iritant		R41

4. MĂSURI DE PRIM AJUTOR

**- STEARALL LQD -**

4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți pacientul la aer curat. Tratați simptomatic
După contactul cu pielea:	Scoateți îmbrăcămintea contaminată. Spălați zona afectată cu apă din abundență
După contactul cu ochii:	Irigați ușor cu apă curată. Dacă iritația persistă, solicitați îngrijire medicală
După înghițire:	Se va clăti imediat și în mod repetat gura cu apă. Dacă este necesar solicitați asistență medicală
Alte informații:	- - -
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	- - -

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	În caz de incendiu, utilizați apă, CO2
Mijloace de stingere necorespunzătoare:	Niciuna
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gazele de explozie și de ardere.
Echipamente speciale de stingere a incendiilor	În caz de incendiu, folosiți un aparat de respirație adecvat echipament de protecție corespunzător.
Altele:	- - -

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Evitați contactul cu ochii. Se va folosi echipament de protecție individual. Scoateți îmbrăcămintea contaminată
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Colectați cu material absorbant, organic, nisip
Metode de limitare a poluarii	Spălați cu apă din abundență
Informații suplimentare:	Nu permiteți să intre în sol / subsol. Preveniți scurgerile în apele de suprafață sau în sistemul de canalizare

**- STEARALL LQD -**

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu ochii și pielea, nu inhalați vapori sau ceață
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Spații cu temperatură adecvată și protejați de îngheț
Specificațiile zonei de depozitare:	Spații ventilați în mod adecvat.
Specificațiile recipientelor:	Recipiente metalice.
Incompatibilități:	Niciuna
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent antispumant pentru fluidele de workover și completion

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control		
Amestec		
TLV _{Ceiling} :		- - -
TLV _{TWA} :		- - -
TLV _{STEL} :		- - -
Limita biologică:		- - -
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilație generală recomandată
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie:	Mască de praf FFP1 necesară în caz de ventilație insuficientă sau expunere prelungită
	Ochi	Ochelari de protecție
	Maini	Mănuși
	Corp	Îmbrăcăminte de protecție
8.3. Controlul expunerii mediului		
Variante de expunere		- -

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid
Aspect:	Lichid
Culoare:	N.a.
Miros:	Caracteristic
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 20 °C:	N.a.
Punct de topire:	N.a.
Punct de fierbere:	>200°C
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.

**- STEARALL LQD -**

Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	0,87-0,89 g/cm ³
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Miscibil
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE**10.1. Reactivitate**

Condiții care trebuie evitate:	Stabil în condiții normale
--------------------------------	----------------------------

10.2. Stabilitate chimică

Materiale incompatibile:	Acizi și baze, agenți oxidanți puternici și derivați.
Posibilitatea de reacții periculoase:	Niciuna

10.3. Produși de descompunere periculoși

Alte informații:	Niciuna
------------------	---------

11. INFORMAȚII TOXICOLOGICE**11.1. Toxicitate Acută**

Toxicitatea Amestecului	
Toxicitate orală acută:	LD50 (Șobolan) <2000 mg/kg
Toxicitate inhalatorie acută:	
Toxicitate cutanată acută:	

11.2. Corozivitate

Piele:	N.a.
Ochi:	N.a.

11.3. Iritabilitate primară

Piele:	Poate provoca ușoară iritație.
Ochi:	Poate provoca ușoară iritație.

11.4. Nocivitate

Ingestie:	N.a.
Inhalare:	N.a.

11.5. Sensibilitate

Piele:	N.a.
Ochi:	N.a.

**- STEARALL LQD -**

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Produsul este slab biodegradabil 40-60%
12.3. Potenția Bioacumulativ	
N.a.	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Consultați o firmă autorizată pentru eliminarea deșeurilor în conformitate cu reglementările locale. Nu deversați în sistemul de canalizare sau în mediul înconjurător, eliminați la un punct autorizat de colectare a deșeurilor.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Eliminați în conformitate cu reglementările locale și naționale

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu:	N.a.
14.2. Transport Maritim (IMDG)	
IMDG Class:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa IACO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

**- STEARALL LQD -****15. INFORMAȚII DE REGLEMENTARE****15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

**- STEARALL LQD -****Legislația pentru deșeuri de ambalaj:**

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeuri de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

**- STEARALL LQD -**

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H304: Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii.

H318: Provoacă leziuni oculare grave

H319: Provoacă o iritare gravă a ochilor

H360: Poate dăuna fertilității sau fătului.

H402: Nociv pentru mediul acvatic cu efecte pe termen lung

R65: Nociv: poate provoca afecțiuni pulmonare în caz de înghițire..

Fraze de precauție / siguranță utilizate în secțiunile anterioare

P202: A nu se manipula decât după ce au fost citite și înțelese toate măsurile de securitate.

P280: Purtați mănuși de protecție / îmbracămințe de protecție / echipament de protecție a ochilor / echipament de protecție a feței.

P273: Evitați dispersarea în mediu.

P301+P310: ÎN CAZ DE ÎNHIȚIRE: sunați imediat la un CENTRU de INFORMARE TOXICOLOGICA sau un medic.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

Sfaturi de siguranță în diferitele secțiuni, mai pe larg.

Fraze de siguranță utilizate în secțiunile anterioare

S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.

S62: În caz de înghițire, a nu se provoca vomă: a se consulta imediat un medic și a se arăta ambalajul (recipientul) sau eticheta.

S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
<i>Indicarea de pericole specifice pentru om și mediul înconjurător:</i>		
SUBSTANȚA / AMESTECUL NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:	P260: Nu inspirați praful/fumul/gazul/ceata/vaporii/spray-ul. P280: Purtați mănuși de protecție / îmbracămințe de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P302+352: ÎN CAZ DE CONTACT CU PIELEA: spălați cu multă apă și săpun.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP) , a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful. S28: În caz de contact cu pielea: spălați cu multă apă și săpun	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul urmator					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Gumă xantan Xanthan Gum	11138-66-2	---	---	---	---	---

**- VISCO XC 84 -**

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Solicitați asistență medicală.
După contactul cu pielea:	Spălați cu săpun și multă apă.
După contactul cu ochii:	Clătiți ochii cu apă ca o măsură de precauție.
După înghițire:	Nu administrați nimic pe cale orală unei persoane în stare de inconștiență. Clătiți gura cu apă
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu, respectați instrucțiunile.
Mijloace de stingere corespunzătoare:	Se vor folosi metode de stingere a incendiului care sunt adecvate condițiilor locale și mediului înconjurător
Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	N.a.
Echipamente speciale de stingere a incendiilor	În caz de incendiu purtați mască pentru praf și îmbrăcăminte de protecție
Altele	N.a.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Evitați formarea de praf.
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Păstra în containere adecvate, închise pentru eliminarea reziduurilor
Metode de limitare a poluarii	Eliminați cu mătură și lopată. Îndepărtați dacă este posibil cu un sistem de vid pentru a preveni generarea de praf.
Informații suplimentare:	N.a.

**- VISCO XC 84 -**

7. MANIPULARE ȘI DEPOZITARE		
7.1. Precauții pentru manipularea în condiții de securitate		
Precauții pentru manipulare în condiții de securitate:	Asigurați o ventilație corespunzătoare în locurile unde se formează praf	
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități		
Condiții de depozitare:	Depozitați într-un loc răcoros, bine ventilat. Păstrați recipientul închis ermetic.	
Specificațiile zonei de depozitare:	Depozitați într-un loc răcoros, bine ventilat.	
Specificațiile recipientilor:	Păstrați recipientul închis ermetic.	
Incompatibilități:	N.a.	
7.3. Utilizare finală specifică:		
Utilizări finale specifice:	Viscozifiant pentru fluide de foraj	

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Amestec		
TLV _{Ceiling} :	---	
TLV _{TWA} :	---	
TLV _{STEL} :	---	
Limita biologică	---	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Se recomandă ventilație adecvată
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.		Asigurați ventilație adecvată. Stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie:	În mod normal, nu este necesar.
	Ochi	Ochelari de protecție
	Maini	Manusi de protecție
	Corp	Îmbrăcăminte de protecție standard
8.3. Controlul expunerii mediului		
Variante de expunere	N.a.	

9. PROPRIETĂȚI FIZICE ȘI CHIMICE		
9.1. Informații generale		
Forma:	Solid	
Aspect:	Pulbere	
Culoare:	Crem până la ușor galbui	
Miros:	Ușor	
Prag olfactiv:	N.a.	
9.2. Informații pentru sănătate, siguranță și mediu		
pH :	5.5-8.5	
Punct de topire:	N.a.	
Punct de fierbere:	N.a.	
Punct de aprindere:	N.a.	
Inflamabilitate (solid, gaz):	N.a.	
Temperatura de autoaprindere:	N.a.	
Temperatura de descompunere:	N.a.	
Pericol de explozie:	N.a.	

**- VISCO XC 84 -**

Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C	1,4-1,6
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Complet Solubil
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil în condiții normale de utilizare
10.2. Stabilitate chimică	
Materiale incompatibile:	N.a.
Posibilitatea de reacții periculoase:	Stabil în condiții normale de utilizare
10.3. Produși de descompunere periculoși	
Alte informații:	Stabil în condiții normale de utilizare

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
<u>Toxicitatea amestecului</u>	
Toxicitate orală acută:	N.a.
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	Nu provoacă iritarea pielii
Ochi:	Nu provoacă iritarea ochilor
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

**- VISCO XC 84 -**

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Consultați un contractor autorizat pentru eliminare în conformitate cu reglementările locale. Nu deversați în sistemul de canalizare sau în mediul înconjurător, eliminați la un punct autorizat de colectare a deșeurilor
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Manipulați în conformitate cu reglementările locale și naționale.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

**15. INFORMAȚII DE REGLEMENTARE****15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solvenților organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

**- VISCO XC 84 -****Legislația pentru deșeuri de ambalaj:**

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeuri de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

**- VISCO XC 84 -**

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

P260: Nu inspirați praful/fumul/gazul/ceata/vaporii/spray-ul.

P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței.

P302+352: ÎN CAZ DE CONTACT CU PIELEA: spălați cu multă apă și săpun.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

Fraze de siguranță utilizate în secțiunile anterioare

S22: A nu se inspira praful.

S28: În caz de contact cu pielea: spălați cu multă apă și săpun

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
ACEST AMESTEC NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI:		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
-	-	-
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		

- AVAGEL PLUS (WYOMING)-

Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	Nu este clasificat ca fiind periculos în conformitate cu Regulamentul(UE) nr. 1272/2008
Fraze de precauție:	P260: Nu respirați praf/fum/gaz/ceață/vapori/spray. P280: Purtați mănuși protectoare/ echipament de protecție/ protejați ochii/fața P302+P352: În caz de contact cu pielea: spălați cu multă apă și săpun	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul de mai jos					
Formula moleculară:	---					
Numărul EC:	---					
Number ONU	---					
Numărul CAS:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
bentonită	1302-78-9	215-108-5	---	---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți persoana la aer curat. Tratați simptomele. Consultați un medic.
După contactul cu pielea:	Scoateți îmbrăcămintea contaminată. Spălați zona afectată cu apă din abundență.
După contactul cu ochii:	Clătiți ușor cu multă apă curată. Dacă persistă iritarea, solicitați asistență medicală.
După înghițire:	Clătiți-vă gura imediat și repetitiv cu apă. Dacă este necesar, consultați un medic.
Alte informații:	Nu sunt date disponibile.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Nu sunt date disponibile
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Nu sunt date disponibile.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsurile de precauție în caz de	Acest produs nu este considerat combustibil. În caz de incendiu respectați

- AVAGEL PLUS (WYOMING)-

incendiu:	următoarele instrucțiuni:
Mijloace de stingere corespunzătoare:	Nu este considerat combustibil. Utilizați: coloane uscate, pulbere, spumă sau CO ₂ .
Mijloace de stingere necorespunzătoare:	Nici unul în special
Pericole care derivă din ardere (produși de descompunere termică periculoși):	Nu există compuși periculoși în urma descompunerii termice.
Echipamente speciale de stingere a incendiilor	În caz de incendiu, purtați mască de praf și îmbrăcăminte de protecție.
Altele	Nu sunt date disponibile

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și haine)
Proceduri de urgență:	Îndepărtați personalul neprotejat. Nu respirați praf. Furnizați ventilare adecvată.
6.2. Precauții pentru mediul înconjurător	
Mijloace de limitare:	Îndepărtați dacă este posibil cu un sistem cu vid pentru a preveni generarea prafului.
Metode de limitare a poluării	Îndepărtați dacă este posibil cu un sistem cu vid pentru a preveni generarea prafului. Evitați adăugarea de apă: poate genera zone alunecoase pe podea.
Informații suplimentare:	Nu sunt date disponibile.
6.3 Metode și material pentru izolarea incendiilor și pentru curățenie	
	Nu sunt date disponibile.
6.4 Trimiteri către alte secțiuni) (trimiteri către secțiunile 8 și 13).	
	A se vedea și declarațiile de la secțiunile 8 și 13.

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați formarea prafului. Nu respirați praf. Utilizați o mască de protecție contra prafului.
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați în zone reci și uscate.
Specificățiile zonei de depozitare:	Nu sunt date disponibile.
Specificățiile recipientilor:	Nu sunt date disponibile.
Incompatibilități:	Nu sunt date disponibile.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent de îngroșare (vâscozifiant) și de suspensie pentru fluide de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control	
TLV _{Ceiling} :	---
TLV _{TWA} :	---
TLV _{STEL} :	---
Limita biologică:	---
8.2. Controale ale expunerii profesionale	
Controale tehnice corespunzătoare :	Spălătoare pentru ochi în apropiere,

- AVAGEL PLUS (WYOMING)-

Protecție colectivă:		Ventilație forțată
Protecția individuală	Respiratorie:	maskă de protecție pentru praf
	Ochi	Ochelari de protecție
	Mâini	Se recomandă mănuși și îmbrăcăminte de protecție
	Corp	Îmbrăcăminte de protecție
8.3. Controlul expunerii mediului		
Scenarii de expunere		Nu sunt date disponibile.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Aspect:	solid
Starea fizica:	Solid în diverse forme
Culoare:	Alb, gris deschis
Miros:	inodor
Prag olfactiv:	Nu sunt date disponibile.
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 gr/l) la 20 °C:	9 – 10,5
Punct de topire:	Mai mare de 450 °C
Punct de fierbere:	N/a
Punct de aprindere:	N/a
Inflamabilitate (solid, gaz):	N/a
Temperatura de autoaprindere:	N/a
Temperatura de descompunere:	N/a
Pericol de explozie:	N/a
Limita de inflamabilitate superioară:	N/a
Limita inferioară de inflamabilitate:	N/a
Presiunea de vapori:	10-41 mm/hg
Greutatea moleculară	84,12
Densitatea la 20 °C:	2.6 g/cm ³
Densitatea aparentă (20°C)	Nu sunt date disponibile.
Densitatea în vrac (Bulk)	1-1.4 kg/m ³
Densitatea relativă (20°C):	Nu sunt date disponibile.
Densitatea de vapori:	Nu sunt date disponibile.
Rata de evaporare:	Nu sunt date disponibile.
Solubilitate în apă (20°C):	< 0.0009 g/l
Coeficientul de distribuție (n-octanol):	Nu sunt date disponibile.
Vâscozitatea (40°C):	N/a
9.3. Alte informații	
Alte informații:	Nu sunt date disponibile.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Inert, ne reactiv
10.2. Stabilitate chimică	

- AVAGEL PLUS (WYOMING)-

Materiale incompatibile:	A nu fi depozitați împreună cu materiale care pot fi afectați de praf.
Posibilitatea de reacții periculoase:	Nu sunt cunoscute reacții periculoase
10.3. Posibilitatea de reacții periculoase	
Nu sunt cunoscuți produși de decompoziție periculoși	
10.4. Condiții de evitat	
Nu sunt date disponibile.	
10.5. Materiale incompatibile	
Nu sunt date disponibile.	
10.6. Produși de descompunere periculoși	
Nu sunt date disponibile.	

11. INFORMAȚII TOXICOLOGICE	
11.1. Informații privind efectele toxicologice	
Toxicitatea amestecului:	
Toxicitate Acută	
Toxicitate orală acută:	LD50 (șobolan): >2000 mg/kg
Toxicitate inhalatorie acută:	LD50 (șobolan): >5.27 mg/l
Toxicitate cutanată acută:	Nu sunt date disponibile.
11.2. Corozivitate	
Piele:	Nu sunt date disponibile.
Ochi:	Nu sunt date disponibile.
11.3. Iritație	
Piele:	Poate cauza iritația pielii la contactul prelungit
Ochi:	Poate cauza iritația ochiului la contactul prelungit
11.4. Toxicitate la doze repetate	
Ingestie:	Nu sunt date disponibile.
Inhalare:	Nu sunt date disponibile
11.5. Sensibilitate	
Piele:	Nu sunt date disponibile. Nu se așteaptă efecte averse.
Ochi:	Nu sunt date disponibile. Nu se așteaptă efecte averse.
11.6 Cancerogenitate	
	Nu sunt date disponibile.
11.7 Mutagenitate	
	Nu sunt date disponibile.
11.8 Toxicitate pentru reproducere	
	Nu sunt date disponibile.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	EC50 (Daphnia Magna) 48h: > 100 mg/l EC50 (Alge de apă dulce) 72h: > 100 mg/l LC50 (biban american) 24h: 2800-3200 mg/l LC50 (pastrav) 96h: 16000 mg/l
Toxicitate în aer:	Nu sunt date disponibile.
Toxicitate în sol:	Nu sunt date disponibile.
12.2. Persistență și degradabilitate	
Alte informații:	N/A. Produs mineral

- AVAGEL PLUS (WYOMING)-

12.3. Potențial de Bioacumulare	
Alte informații:	Nu se așteaptă efecte adverse
12.4. Mobilitate în sol	
Alte informații:	Nu sunt date disponibile.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	Nu sunt date disponibile.
vPvB:	Nu sunt date disponibile.
12.6. Alte efecte adverse	
Alte informații:	Nu sunt date disponibile.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Consultați un punct de colectare autorizat pentru a elimina conform reglementărilor în vigoare.
Cod de deșeu:	Nu sunt date disponibile.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Nu sunt date disponibile.
Alte recomandări:	Consultați un punct de colectare autorizat pentru a elimina conform reglementărilor în vigoare.
	Legislația privind eliminarea deșeurilor: (trece la 13) Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
	Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	Nu sunt date disponibile.
Clasa (clasele) de pericol pentru transport	Nu sunt date disponibile.
Grupul de ambalare:	Nu sunt date disponibile.
Pericol pentru mediu	Nu sunt date disponibile.
Precauții pentru utilizatori	
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	Nu sunt date disponibile.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport

- AVAGEL PLUS (WYOMING)-

Clasa IATA	Nu sunt date disponibile.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	Nu sunt date disponibile.

15. INFORMAȚII DE REGLEMENTARE

15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.

Reglementări naționale:

Legea 319/2006 – legea referitoare la sănătatea și securitatea în muncă

HG 1425/2006 consolidată – Norme de aplicare ale Legii 301/2006

HG 1218/2006 privind Stabilirea cerințelor minime de securitate și sănătate în muncă pentru asigurarea protecției lucrătorilor împotriva riscurilor legate de prezența agenților chimici

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

15.2 Evaluarea securității chimice	Nu a fost efectuată o evaluare a securității chimice.
---	---

16. ALTE INFORMAȚII

16.1. Principalele surse bibliografice

ECDIN - Environmental Chemicals Data and Information Network - Rețeaua de Informații și Date despre Substanțele Chimice utilizate în Mediul Înconjurător creată de Joint Research Centre, Commission of the European Communities - Centrul European Comun de Cercetare al Comisiei Comunităților Europene

SAX's DANGEROUS PROPERTIES OF INDUSTRIAL MATERIALS - Eight Edition – Van Nostrand Reinold

Istituto Superiore di Sanità - Inventario Nazionale Sostanze Chimiche-/ Institutul Superior de sănătate – Inventarul Național al Substanțelor (Italia)

ACGIH - Threshold Limit Values - 2009 edition/ ACGIH – Valorile limită de prag - ediția 2009

Ghid de redactare a fișelor cu date de securitate, versiunea 2, Decembrie 2013, ECHA

16.2. Lista frazelor de pericol și de precauție utilizate Alte informații –

Fraze de pericol utilizate în secțiunile anterioare

P260: Nu respirați praf/fum/gaz/ceață/vapori/spray.

P280: Purtați mănuși protectoare/ echipament de protecție/ protejați ochii/fața

P302+P352: În caz de contact cu pielea: spălați cu multă apă și săpun

Fraze de precauție utilizate în secțiunile anterioare

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

16.3. Abrevieri și acronime utilizate:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

ECHA – Agenția Europeană pentru Substanțe Chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința Americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

N/A: neaplicabil

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

- AVAGEL PLUS (WYOMING)-

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

FSD: Fișa de Date de securitate

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații –

16.4.1 Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul EU 453/2010/. Această fișă anulează și înlocuiește orice ediție precedentă. Modificările intervenite între două ediții ale unei FDS sunt ținute sub control la producător.

16.4.2 Clauze de exonerare de răspundere

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document. Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere conform celor indicate în fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță pentru utilizarea intenționată declarată. Este reponsabilitatea utilizatorului să se asigure că este în posesia ultimei ediții a fișei de securitate.

16.4.3 Răspundere

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate cu excepția acelor informații din secțiunile 1, 13, 15 și 16 care au fost armonizate cu legislația română în vigoare. De asemenea, structura fișei de securitate a fost armonizată cu structura din Anexa II B a Regulamentului UE 1907/2008.

Răspunderea pentru conținutul versiunii în limba engleză al acestei FDS aparține Ava S.p.A.

Răspunderea pentru traducerea în limba română a reviziei 3 a acestei FDS și armonizarea cu cerințele legislației române la secțiunile mai sus indicate , aparține AVA EASTERN EUROPE D.F & S srl prin Compartimentul QSHE și Isabela NIȚĂ, inginer chimist.

Sfârșitul fișei de securitate

Bentonită	1302-78-9	215-108-5		---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Nu sunt măsuri speciale
După contactul cu pielea:	Nu sunt măsuri speciale
După contactul cu ochii:	Nu sunt măsuri speciale. Clătiți imediat cu multă apă
După înghițire:	Nu sunt măsuri speciale
Alte informații:	Nu sunt date disponibile.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Nu sunt date disponibile.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Nu sunt date disponibile.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați următoarele instrucțiuni:

- BENTONITA API -

Mijloace de stingere corespunzătoare:	Utilizați: apă, pulberi, spumă, dioxid de carbon.
Mijloace de stingere necorespunzătoare:	Nici unul specificat
Pericole care derivă din ardere (produși de descompunere termică periculoși):	Nu este inflamabil, nu este exploziv. Nu este nici un pericol în caz de incendiu.
Echipamente speciale de stingere a incendiilor	În caz de incendiu, purtați un aparat pentru respirație presurizat și îmbrăcăminte de protecție.
Altele	Nu sunt date disponibile

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ

6.1. Precauții personale, echipament de protecție și proceduri de urgență

Echipament de protecție:	În cazul unor expuneri prelungite sau la un nivel mare de praf în suspensie, purtați o protecție respiratorie în conformitate cu legislația națională.
Proceduri de urgență:	Nu sunt necesare precauții specifice.

6.2. Precauții pentru mediul înconjurător

Mijloace de limitare:	Evitați măturarea prafului uscat, stropiți cu apă sau folosiți un sistem de aspirare pentru a preveni praful. Luați în considerare că bentonita umedă devine alunecoasă.
Metode de limitare a poluării	Evitați măturarea prafului uscat, stropiți cu apă sau folosiți un sistem de aspirare pentru a preveni praful. Luați în considerare că bentonita umedă devine alunecoasă.
Informații suplimentare:	Nu sunt date disponibile.

6.3 Metode și material pentru izolarea incendiilor și pentru curățenie

	Nu sunt date disponibile.
--	---------------------------

6.4 Trimiteri către alte secțiuni) (trimiteri către secțiunile 8 și 13).

	A se vedea și declarațiile de la secțiunile 8 și 13.
--	--

7. MANIPULARE ȘI DEPOZITARE

7.1. Precauții pentru manipularea în condiții de securitate

Precauții pentru manipulare în condiții de securitate:	Evitați generarea de praf.
--	----------------------------

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	Este necesară ventilarea generală. Păstrați în zone uscate și reci.
Specificațiile zonei de depozitare:	Zone bine ventilate.
Specificațiile recipientilor:	Nu sunt date disponibile
Incompatibilități:	Nu sunt date disponibile

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Agent de modificare a vâscozității și de suspendare pentru fluide de foraj
-----------------------------	--

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ

8.1. Parametri de control

TLV _{Ceiling} :	Dust exposure limits: Frația Inhalabilă: 3 mg/m ³ Frația respirabilă: 10 mg/m ³
TLV _{TWA} :	- - -
TLV _{STEL} :	- - -

- BENTONITA API -

Limita biologică:		- - -
8.2. Controale ale expunerii profesionale		
Controale tehnice corespunzătoare :		Se recomandă ventilația adecvată
Protecție colectivă:		Se recomandă ventilație adecvată și filtrarea la locurile de muncă, acolo unde poate fi generat praf. Spălați-vă pe mâini înainte de pauze și la sfârșitul zilei de muncă. Îndepărtați și spălați îmbrăcămintea contaminată.
Protecția individuală	Respiratorie:	În cazul în care există o expunere prelungită la praf, se utilizează o protecție respiratorie în conformitate cu legislația națională.
	Ochi	Nu sunt necesare măsuri speciale
	Mâini	Nu sunt necesare măsuri speciale
	Corp	Nu sunt necesare măsuri speciale
8.3. Controlul expunerii mediului		
Scenarii de expunere		Nu sunt date disponibile.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Aspect:	Solid sub forma de pulbere, granule, peleți
Starea fizică:	Solid sub forma de pulbere, granule, peleți
Culoare:	De la alb la maro
Miros:	Inodor
Prag olfactiv:	N/A
9.2. Informații pentru sănătate, siguranță și mediu	
pH:	Nu sunt date disponibile
Punct de topire:	> 450°C
Punct de fierbere:	N/A
Punct de aprindere:	Produsul nu este inflamabil
Inflamabilitate (solid, gaz):	Produsul nu este inflamabil
Temperatura de autoaprindere:	N/A
Temperatura de descompunere:	Nu sunt date disponibile.
Pericol de explozie:	Nu este exploziv cf. Reg. 1272/2008, anexa 6.
Limita de inflamabilitate superioară:	N/A
Limita inferioară de inflamabilitate:	N/A
Presiunea de vapori:	N/A
Densitatea (20°C):	Nu sunt date disponibile
Densitatea aparentă (20°C)	0,9 – 1,4 g/ml
Densitatea relativă (20°C):	2,6 g/cm ³
Densitatea de vapori:	N/A.
Rata de evaporare:	N/A
Solubilitate în apă (20°C):	< 0,9 mg/l
Coeficientul de distribuție (n-octanol):	Nu sunt date disponibile.
Vâscozitatea (40°C):	N/A
9.3. Alte informații	
Alte informații:	Nu sunt date disponibile.

- BENTONITA API -

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil chimic, nu este incompatibil, nu rezultă compuși periculoși în urma descompunerii.
10.2. Stabilitate chimică	
Materiale incompatibile:	Nu sunt date disponibile
Posibilitatea de reacții periculoase:	Nu se descompune dacă este folosit în conformitate cu instrucțiunile.
10.3. Posibilitatea de reacții periculoase	
Nu sunt date disponibile	
10.4. Condiții de evitat	
Nu sunt date disponibile.	
10.5. Materiale incompatibile	
Nu sunt date disponibile.	
10.6. Produși de descompunere periculoși	
Nu sunt date disponibile.	

11. INFORMAȚII TOXICOLOGICE	
11.1. Informații privind efectele toxicologice	
Toxicitate Acută	
Toxicitate orală acută:	LD50 (șobolan): >2000 mg/kg
Toxicitate inhalatorie acută:	LD50 (șobolan): > 5,27 mg/kg
Toxicitate cutanată acută:	Nu sunt date disponibile.
11.2. Corozivitate	
Piele:	Nu este corosiv pentru piele
Ochi:	Nu este corosiv pentru ochi.
11.3. Irritație	
Piele:	Nu sunt date disponibile.
Ochi:	Nu sunt date disponibile.
11.4. Toxicitate la doze repetate	
Ingestie:	Nu sunt date disponibile.
Inhalare:	Nu sunt date disponibile
11.5. Sensibilitate	
Piele:	Nu este sensibilizant pentru piele.
Ochi:	Nu sunt date disponibile.
11.6 Cancerogenitate	
	Nu sunt date disponibile.
11.7 Mutagenitate	
	Nu sunt date disponibile.
11.8 Toxicitate pentru reproducere	

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	LC50 (pești de apă dulce) 96h: 16000 mg/l LC50 (pește oceanic) 24h: 2800-3200 mg/l EC50 (nevertebrate de apă dulce - crab Dungeness) 96h: 81,6 mg/l EC50 (nevertebrate de apă dulce- crevete Dock) 96h: 24,8 mg/l

- BENTONITA API -

	EC50 (Alga) 72h: >100 mg/l EC50 (Daphnia magna) 48h: > 100 mg/l
Toxicitate în aer:	Nu sunt date disponibile.
Toxicitate în sol:	Nu sunt date disponibile.
12.2. Persistență și degradabilitate	
Alte informații	Nu este relevantă pentru substanțe anorganice.
12.3. Potențial de Bioacumulare	
Alte informații:	Nu este relevantă pentru substanțe anorganice
12.4. Mobilitate în sol	
Alte informații:	Este aproape insolubilă și de aceea are o mobilitate scăzută în sol.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	Nu îndeplinește criteriile de clasificare ca PBT și vPvB
vPvB:	Nu îndeplinește criteriile de clasificare ca PBT și vPvB
12.6. Alte efecte adverse	
Alte informații:	Nu sunt date disponibile.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Poate fi depozitată conform reglementărilor locale. Materialul ar trebui să fie îngropat pentru a preveni emisii de praf. Ar trebui preferată reciclarea în locul eliminării.
Cod de deșeu:	Nu sunt date disponibile.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Nu sunt date disponibile.
Alte recomandări:	Nu sunt prevederi specifice. Ambalajele goale ar trebui duse la un punct de colectare autorizat pentru reciclare sau eliminare.
	Legislația privind eliminarea deșeurilor: (trece la 13) Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
	Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	Nu sunt date disponibile.
Clasa (clasele) de pericol pentru transport	Nu sunt date disponibile.
Grupul de ambalare:	Nu sunt date disponibile.

- BENTONITA API -

Pericol pentru mediu	Nu sunt date disponibile.
Precauții pentru utilizatori	
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	Nu sunt date disponibile.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	Nu sunt date disponibile.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	Nu sunt date disponibile.

15. INFORMAȚII DE REGLEMENTARE

15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.

Reglementări naționale:

Legea 319/2006 – legea referitoare la sănătatea și securitatea în muncă

HG 1425/2006 consolidată – Norme de aplicare ale Legii 301/2006

HG 1218/2006 privind Stabilirea cerințelor minime de securitate și sănătate în muncă pentru asigurarea protecției lucrătorilor împotriva riscurilor legate de prezența agenților chimici

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

15.2 Evaluarea securității chimice Nu a fost efectuată o evaluare a securității chimice.

16. ALTE INFORMAȚII

16.1. Principalele surse bibliografice

ECDIN - Environmental Chemicals Data and Information Network - Rețeaua de Informații și Date despre Substanțele Chimice utilizate în Mediul Înconjurător creată de Joint Research Centre, Commission of the European Communities - Centrul European Comun de Cercetare al Comisiei Comunităților Europene

SAX's DANGEROUS PROPERTIES OF INDUSTRIAL MATERIALS - Eight Edition – Van Nostrand Reinold

Istituto Superiore di Sanità - Inventario Nazionale Sostanze Chimiche-/ Institutul Superior de Sănătate – Inventarul Național al Substanțelor (Italia)

ACGIH - Threshold Limit Values - 2009 edition/ ACGIH – Valorile limită de prag - ediția 2009

Ghid de redactare a fișelor cu date de securitate, versiunea 2, Decembrie 2013, ECHA

16.2. Lista frazelor de pericol și de precauție utilizate Alte informații –

Fraze de pericol utilizate în secțiunile anterioare

- -

Fraze de precauție utilizate în secțiunile anterioare

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

16.3. Abrevieri și acronime utilizate:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

ECHA – Agenția Europeană pentru Substanțe Chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

Rev. 3 din data Iulie 2014.

Traducere din limba Engleza și armonizare: 9.01.2014.

Pagina: 7/8

- BENTONITA API -

ACGIH: American Conference of Industrial Hygienists - Conferința Americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

N/A: neaplicabil

NOEC: no observable effect concentration - concentrația fără efect observat

P.E: Polietilenă

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

FSD: Fișa de Date de securitate

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value - Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value - Short Term exposure limit; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value - Ceiling - Valoarea prag limită - maximă

16.4. Alte informații -

16.4.1 Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul EU 453/2010/. Această fișă anulează și înlocuiește orice ediție precedentă. Modificările intervenite între două ediții ale unei FDS sunt ținute sub control la producător.

16.4.2 Clauze de exonerare de răspundere

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document. Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere conform celor indicate în fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță pentru utilizarea intenționată declarată. Este reponsabilitatea utilizatorului să se asigure că este în posesia ultimei ediții a fișei de securitate.

16.4.3 Răspundere

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate cu excepția acelor informații din secțiunile 1, 13, 15 și 16 care au fost armonizate cu legislația română în vigoare. De asemenea, structura fișei de securitate a fost armonizată cu structura din Anexa II B a Regulamentului UE 1907/2008.

Răspunderea pentru conținutul versiunii în limba engleză al acestei FDS aparține Ava S.p.A.

Răspunderea pentru traducerea în limba română a reviziei 3 a acestei FDS și armonizarea cu cerințele legislației române la secțiunile mai sus indicate, aparține AVA EASTERN EUROPE D.F & S srl prin Compartimentul QSHE și Isabela NIȚĂ, inginer chimist.

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
	GHS07	Tox. Ac. 4 H312: Nociv în contact cu pielea H332: Nociv în caz de inhalare. Irit. Piele 2 H315: Provoacă iritarea pielii Irit. Oc. 2 H319: Provoacă o iritare gravă a ochilor STOT SE 3 H335: Poate provoca iritarea căilor respiratorii
Fără pictograma	Fara cuvânt de atenționare	Acvatic cronic 3 H412: Nociv pentru mediul acvatic cu efecte pe termen lung
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
	Xn - nociv	R20/21: Nociv prin inhalare și în contact cu pielea.
	Xi - iritant	R 36/37/38: Iritant pentru ochi, sistem respirator și pentru piele
	N – Periculos pentru mediu	R52/53: Nociv pentru organismele acvatice, poate provoca efecte adverse pe termen lung asupra mediului acvatic.
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	 GHS07	Tox. Ac. 4 H312: Nociv în contact cu pielea H332: Nociv în caz de inhalare
		Irit. Piele 2 H315: Provoacă iritarea pielii
		Irit. Oc. 2 H319: Provoacă o iritare gravă a ochilor.
		STOT SE 3 H335: Poate provoca iritarea căilor respiratorii
	Fără pictograma	Acvatic cronic 3 H412: Nociv pentru mediul acvatic cu efecte pe termen lung
Fraze de precauție:	P261: Nu respirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție / îmbracămințe de protecție / echipament de protecție a ochilor / echipament de protecție a feței.	

**- DEOXY DEHA -**

	<p>P312: Sunați la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic, dacă nu vă simțiți bine.</p> <p>P362: Scoateți îmbrăcămintea contaminată și spălați-o înainte de reutilizare.</p> <p>P304 + P340: ÎN CAZ DE INHALARE: transportați victima la aer liber și mențineți-o în stare de repaus, într-o poziție confortabilă pentru respirație.</p> <p>P332 + P313: În caz de iritare a pielii, consultați medical.</p> <p>P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.</p>	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP) , a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		Xn - nociv R20/21: Nociv prin inhalare și în contact cu pielea.
		Xi - iritant R 36/37/38: Irritant pentru ochi, sistem respirator și pentru piele
		N – Periculos pentru mediu R52/53: Nociv pentru organismele acvatice, poate provoca efecte adverse pe termen lung asupra mediului acvatic.

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Dacă respirația este neregulată sau a încetat, administrați respirație artificială. Consultați imediat un medic și arătați-i ambalajul sau eticheta
După contactul cu pielea:	Scoateți imediat toate hainele contaminate. Spălați imediat cu apă curentă din abundență și, eventual, cu săpun, zone ale corpului care a venit în contact cu produsul, chiar dacă este doar o suspiciune
După contactul cu ochii:	În caz de contact cu ochii, clătiți cu apă pentru o durată suficientă de timp și cu pleoapele deschise, apoi consultați imediat un medic oftalmolog. Protejați ochiul intact
După înghițire:	Nu mâncați, nu beți și nu fumați în timpul utilizării. Dacă în caz de înghițire nu vă simțiți bine, contactați de urgență un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic.
Alte informații:	---
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Nu sunt disponibile.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	---
5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	Utilizați spumă, pulbere uscată sau CO2
Mijloace de stingere necorespunzătoare:	Niciuna în mod particular
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gazele de explozie și de ardere. Arderea produce un fum greu.
Echipamente speciale de stingere a incendiilor	Folosiți un aparat de respirație adecvat
Altele:	Colectați separat apa contaminată folosită pentru a stinge focul. Nu va fi evacuată în sistemul de canalizare. Dacă este posibil în ceea ce privește siguranța, scoateți ambalaje nedeteriorate din zona de pericol imediat
6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Evitați contactul cu ochii și pielea. Scoateți toate hainele contaminate
Proceduri de urgență:	Nu respirați vaporii / ceața / gaz. Feriți-vă de acumulările de vapori care formează concentrații explosive. Vaporii se pot acumula în zonele joase. Scoateți persoane în zone de siguranță
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Folosiți media absorbant, organic, nisip
Metode de limitare a poluarii	Nu permiteți infiltrarea în sol / subsol. Nu permiteți infiltrarea în apele de suprafață sau în sistemul de canalizare. În cazul accesului în cursurile de apă, sol sau în canalizare, informați autoritățile responsabile

**- DEOXY DEHA -**

Informații suplimentare:	Rețineți apa de spălare contaminată și eliminați-o conform regulamentelor
--------------------------	---

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu ochii și pielea, inhalarea de vapori și aburi. A nu se folosi recipientul gol înainte de a fi curățat. Înainte de operațiunile de transfer să vă asigurați că în recipiente nu există reziduuri materiale incompatibile. Hainele contaminate ar trebui să fie schimbate înainte de a intra la locurile de servit masa
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați ambalajul închis ermetic. A se păstra la distanță de alimente, băuturi și hrană pentru animale
Specificațiile zonei de depozitare:	Spații suficient ventilați, la distanță de materiale incompatibile
Specificațiile recipientelor:	Păstrați întotdeauna containerele ermetic închise
Incompatibilități:	Niciuna
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Inhibitor de coroziune pentru fluide de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control		
Amestec		N, N-Dietil-hidroxilamina 85% CAS No. 3710-84-7
Valori limită de expunere DNEL		Consumator: 00:13 mg / kg - Expunere: orala umana - efecte sistemice pe termen scurt Lucrător industrial: 8.76 mg/m3 - Expunere: Inhalarea umană - efecte sistemice pe termen lung Consumator: 0,65 mg/m3 - Expunere: Inhalare umană - efecte sistemice pe termen scurt Lucrător industrial: 45,6 mg/m3 - Expunere: Inhalarea umană - efecte locale pe termen lung, Lucrător industrial: 4,7 mg / kg - Expunere: Dermic umana- efecte sistemice pe termen lung
Valori limită de expunere PNEC		Target: apă proaspătă - Valoare: 8,2 mg / l Target: apa de mare - Valoare: 0,82 mg / l Țintă: sedimente de apă dulce - Valoare: 0.0652 mg / kg Target: sedimente apa de mare - Valoare: 0.00652 mg / kg
Limita biologică:		- - -
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilație generală
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie:	Utilizați aparat de respirație
	Ochi	Ochelari de protecție
	Maini	Mănuși de protecție totală
	Corp	Salopetă protectoare pentru intregul corp
8.3. Controlul expunerii mediuluiă		
Variante de expunere		- -

**- DEOXY DEHA -****9. PROPRIETĂȚI FIZICE ȘI CHIMICE****9.1. Informații generale**

Forma:	Lichid
Aspect:	Lichid
Culoare:	De la incolor la galben pai
Miros:	Nu este relevant
Prag olfactiv:	N.a.

9.2. Informații pentru sănătate, siguranță și mediu

pH:	> 10
Punct de topire:	N.a.
Punct de fierbere:	100 °C
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.

10. STABILITATE ȘI REACTIVITATE**10.1. Reactivitate**

Condiții care trebuie evitate:	Stabil în condiții normale
--------------------------------	----------------------------

10.2. Stabilitate chimică

Materiale incompatibile:	Niciunul
Posibilitatea de reacții periculoase:	Stabil în condiții normale

10.3. Produsi de descompunere periculoși

Alte informații:	Stabil în condiții normale.
------------------	-----------------------------

11. INFORMAȚII TOXICOLOGICE**11.1. Toxicitate Acută**

Substanța	<i>N, N-Dietil-hidroxilamina 85% CAS No. 3710-84-7</i>
Toxicitate orală acută:	LD50 (Șobolan): 2190 mg/kg
Toxicitate inhalatorie acută:	LC50 (Șobolan) 4 h: 3140 ppm
Toxicitate cutanată acută:	LD50 (Iepure): 1300 mg/kg

**- DEOXY DEHA -**

11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substanța	<i>N, N-Dietil-hidroxilamina 85% CAS No. 3710-84-7</i>
Toxicitate în apă:	LC50 (Pești): 134 mg/l EC50 (Alge) 48h: 8.9 mg/l EC50 (Crustacee) 96h:> 101 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Nu este ușor biodegradabil
12.3. Potenția Bioacumulativ	
N.a.	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	Niciunul
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Colectați dacă este posibil. Eliminați în conformitate cu reglementările locale.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Eliminați în conformitate cu reglementările locale și naționale

**- DEOXY DEHA -**

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Denumirea oficială a transportului	
Cod de restricție în galerie/tunel	N.a.
14.2. Transport Maritim (IMDG)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Numarul EMS	
Clasa (clasele) de pericol pentru transport	
Grupul de ambalare:	
Poluant marin:	
Denumirea oficială a transportului	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IACO/ATA	
Eticheta	
Grupul de ambalare:	
Denumirea oficială a transportului	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr. 1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase; HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase; REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	

**- DEOXY DEHA -**

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr.1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

**- DEOXY DEHA -****Alte informații**

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații
Fraze de pericol utilizate în secțiunile anterioare
H226: Lichid și vapori inflamabili H312: Nociv în contact cu pielea H332: Nociv în caz de inhalare H315: Provoacă iritarea pielii H319: Provoacă o iritare gravă a ochilor H335: Poate provoca iritarea căilor respiratorii H411: Toxic pentru mediul acvatic cu efecte pe termen lung H412: Nociv pentru mediul acvatic cu efecte pe termen lung
R10: Inflamabil R20/21: Nociv prin inhalare și în contact cu pielea. R36/37/38: Irritant pentru ochi, sistem respirator și pentru piele R52/53: Nociv pentru organismele acvatice, poate provoca efecte adverse pe termen lung asupra mediului acvatic.
Fraze de precauție /siguranta utilizate în secțiunile anterioare
P261: Nu respirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P312: Sunați la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic, dacă nu vă simțiți bine. P362: Scoateți îmbrăcăminte contaminată și spălați-o înainte de reutilizare. P304 + P340: ÎN CAZ DE INHALARE: transportați victima la aer liber și mențineți-o în stare de repaus, într-o poziție confortabilă pentru respirație. P332 + P313: În caz de iritare a pielii, consultați medical. P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți. P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.
S23: A nu se inspira gazul/fumul/vaporii/aerosolii/ (termenul(ii) corespunzător(i) se specific de producător). S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S24/25: Evitați contactul cu pielea și ochii. S36/37: Purtați echipament de protecție corespunzător, mănuși și mască de protecție pentru ochi/față. S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos

SEC IUNEA 2: IDENTIFICAREA PERICOLELOR

Clasificarea substan ei sau a amestecului
REGULAMENTUL (EC) Nr. 1272/2008

Flowzan® Biopolymer

Versiunea 1.9

Revizie Data 2014-05-01

Substan a / amestecul nu este clasificat ca fiind periculos în conformitate cu Regulamentul (EC) Nr. 1272/2008.

Clasificarea (67/548/EEC, 1999/45/EC)

Substan a / amestecul nu este clasificat ca fiind periculos în conformitate cu Directivele EC 67/548/EEC sau 1999/45/EC.

Elemente pentru etichet**Etichetare (REGULAMENTUL (EC) Nr.1272/2008)**

Substan a / amestecul nu este clasificat ca fiind periculos în conformitate cu Regulamentul (EC) Nr. 1272/2008.

SEC IUNEA 3: COMPOZI IE / INFORMA II PRIVIND COMPONENTEN II

Sinonime: Niciunul

Formula molecular : Amestec

Nu conține ingrediente periculoase conform GHS:

Observații: Nu conține ingrediente periculoase conform GHS.

SEC IUNEA 4: M SURI DE PRIM AJUTOR

Informa ii generale: Nu l sați victima nesupravegheat .

Dup inhalare:: P stra i tractul respirator curat. Dac simptomele persist adresa i-v unui medic.

Dup contactul cu pielea:: Sp la i cu ap i s pun.

Dup contactul cu ochii:: Scoateți lentilele de contact. Proteja i ochiul intact. Dac iritatie ochilor persist , consultati un specialist.

Dup înghi ire:: P stra i tractul respirator curat. Nu administrați nimic pe cale oral unei persoane în stare de incon tienț . Dac simptomele persist adresa i-v unui medic.

SEC IUNEA 5: M SURI DE COMBATERE A INCENDIILOR

Punct de aprindere: N u se aplic

Temperatura de autoaprindere: Nu exist date disponibile.

Echipamente speciale de protecție pentru pompieri: Purta i un aparat respirator autonom în caz de incendiu, dac este necesar.

Informații suplimentare: Procedura standard pentru incendiu de origine chimic . Utilizați m suri care sunt adecvate condițiilor locale i mediului înconjur tor.

Protec ie contra incendiului sau exploziei: Asigurați o ventilație corespunz toare în locurile unde se formeaz praf.

Flowzan® Biopolymer

Versiunea 1.9

Revizie Data 2014-05-01

Produsul de descompunere periculoasă: Nu există date disponibile.**SEC IUNEA 6: MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ****Precauții personale:** Evitați formarea de praf.**Precauții pentru mediul înconjurător:** Dacă produsul contaminează râurile, lacurile sau sistemul de canalizare informați autoritățile corespunzătoare.**Metode de curățare:** Colectați și eliminați faza de praf. Utilizați metoda lopată. Păstrați în containere adecvate, închise ermetic pentru eliminare.**SEC IUNEA 7: MANIPULARE ȘI DEPOZITARE****Manipulare****Sfaturi pentru manipulare în condiții de siguranță:** Pentru protecția personală, a se vedea punctul 8 Fumatul, mâncatul și băutul sunt interzise în spațiul de utilizare.**Măsuri de protecție contra incendiilor și exploziilor:** Asigurați o ventilație corespunzătoare în locurile unde este format praful.**Depozitare****Cerințe pentru zonele de depozitare și containere:** Instalații electrice / materiale de lucru trebuie să corespundă cu standardele de siguranță tehnologice.**Informații privind depozitarea în comun:** Nu sunt materiale menționate în mod special.**SEC IUNEA 8: CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ****Ingrediente cu parametri de control la locul de muncă****SE**

Bestandsdelar	Grundval	Värde	Kontrollparametrar	Anmärkning
Saturated monocarboxylic acid, calcium salt	SE AFS	NGV	5 mg/m ³	43, 44, II.c, Total
	SE AFS	NGV	5 mg/m ³	2, 43, 44, Total

2 Med respirabelt damm menas den dammfraction som definieras i svensk standard SS-EN 481, Arbetsplatsluft - Partikelstorleksfraktioner för mätning av luftburna partiklar, Utgåva 1, 1993, punkt 2.11 och som har en provtagningskaraktäristik enligt punkt 5.3. Med inhalerbart damm menas den dammfraction som definieras i svensk standard SS-EN 481, Arbetsplatsluft - Partikelstorleksfraktioner för mätning av luftburna partiklar, Utgåva 1, 1993, punkt 2.3 och som har en provtagningskaraktäristik enligt punkt 5.1. Med respirabelt damm menas den dammfraction som definieras i svensk standard SS-EN 481, Arbetsplatsluft - Partikelstorleksfraktioner för mätning av luftburna partiklar, Utgåva 1, 1993, punkt 2.11 och som har en provtagningskaraktäristik enligt punkt 5.3. Med totaldamm menas de partiklar (aerosoler) som fastnar på ett filter i den provtagare som beskrivs i Metodserien, Provtagning av totaldamm och respirabelt damm, Metod nr 1010, Arbetskyddsstyrelsen, numera Arbetsmiljöverket. Filterdiametern är normalt 37 mm, men kan även vara 25 mm. Trots sitt namn provtas inte den totala mängden luftburna partiklar med denna metod.

43 Här innefattas stearater som salter och estrar, bl.a. Aluminiummonostearat [7047-84-9], Aluminiumdistearat [300-92-5], Aluminiumtristearat [637-12-7], Ammoniumstearat [1002-89-7], N-butylstearat [123-95-5], Dietylglykolmonostearat [106-11-6], Etylglykolmonostearat [111-60-4], Glycerolmonostearat [31566-31-1], Kalciumstearat [1592-23-0], Kaliumstearat [593-29-3], Litiumstearat [4485-12-5], Magnesiumstearat [557-04-0], Natriumstearat [822-16-2], Zinkstearat [557-05-1]

44 Gränsvärdet gäller inte sådana metallstearater som innehåller toxiska metaller, t.ex. bly. I detta fall ska gränsvärdet för bly användas

II.c Se sidan 57 anmärkning II: Med totaldamm menas de partiklar (aerosoler) som fastnar på ett filter i den provtagare som beskrivs i

Metodserien, Provtagning av totaldamm och respirabelt damm, Metod nr 1010, arbetskyddsstyrelsen, numera Arbetslivsinstitutet, 1979. Filterdiametern är normalt 37 mm, men kan även vara 25 mm.

M suri tehnice

Ventilație adecvat pentru a controla concentrațiile în aer sub limitele de expunere / conform ghidurilor. Luați în considerare pericolele potențiale ale acestui material (a se vedea secțiunea 2), limitele de expunere aplicabile, activități corespunzătoare locului de muncă, și alte substanțe la locul de muncă, atunci când se proiectează controlul tehnic și selectarea echipamentului individual de protecție. În cazul în care controalele tehnice sau practicile de lucru nu sunt adecvate pentru a preveni expunerea la niveluri nocive ale acestui material, este recomandat utilizarea echipamentului individual de protecție enumerat mai jos. Utilizatorul trebuie să citească și să înțeleagă toate instrucțiunile și limitările furnizate cu echipamentul de protecție, deoarece este furnizat de obicei pentru o perioadă limitată de timp sau în anumite condiții.

Echipament individual de protecție

Protecția respiratorie: Purtați un aparat respirator certificat NIOSH alimentat cu aer, cu excepția cazului când ventilația sau alte controale tehnice sunt adecvate pentru a menține un conținut minim de oxigen de 19,5% în volum în condiții de presiune atmosferică normală.

Protecția mâinilor: Dacă mâinile sunt adecvate pentru un anumit loc de muncă, acest lucru ar trebui să fie discutat cu producătorii de mănuși de protecție. Vă rugăm să respectați instrucțiunile referitoare la permeabilitatea și timpul de strângere, care sunt furnizate de către fabricantul de mănuși. De asemenea, luați în considerare condițiile locale specifice în care produsul este folosit, cum ar fi pericolul de tăiere, erodare, precum și timpul de contact. Mănușile trebuie să fie scoase și înlocuite dacă există vreun semn de degradare sau perturbare chimică.

Protecția ochilor: Ochelari de protecție. Sticlă pentru spălarea ochilor cu apă pură.

Protecția pielii și a corpului: Alegeți modul de protecție a corpului în funcție de tipul expunerii, de concentrația și cantitatea de substanțe periculoase, precum și de specificul locului de muncă. Utilizați, după caz: Îmbrăcăminte de protecție ușoară. Încălțăminte de protecție.

M suri de igienă : Practici generale de igienă industrială.

Flowzan® Biopolymer

Versiunea 1.9

Revizie Data 2014-05-01

Descriere

Stare fizic : Solid
Culoare: Crem / bej până la galben deschis
Miros: U or

Date de securitate

Punct de aprindere: Nu se aplică
Limita inferioară de explozie: Nu există date
Limită superioară de explozie: Nu sunt date disponibile

Proprietăți oxidante: Nu

Temperatura de autoaprindere: Nu există date disponibile

Formula molecular : Amestec

Greutate molecular : Nu este cazul

pH: 5,5 - 8,5

Punct de curgere: Nu sunt disponibile date

Punct de fierbere / Interval de fierbere: Nu este cazul

Presiune de vapori: Nu este cazul

Densitatea relativ : 1,4 - 1,6

Solubilitate în apă : Complet solubil

Coeficientul de partiție: n- octanol / apă : Nu sunt disponibile date

Vâscozitate cinematic : Nu există date

Densitatea de vapori relativ : Nu se aplică :

Viteza de evaporare: Nu există date disponibile

SEC IUNEA 10: STABILITATE ȘI REACTIVITATE

Stabilitate chimică : Acest material este considerat stabil în condiții normale și condițiile de depozitare și manipulare anticipate de temperatură și presiune.

Posibilitatea de reacții periculoase

Condiții de evitat: Nu există date disponibile.

Alte date: Produsul nu se descompune dacă este depozitat și folosit conform normelor recomandate.

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII	
3.1. Proprietăți chimice ale substanței sau amestecului	
Compoziție:	amestec
Conținut:	În conformitate cu tabelul de mai jos
Formula moleculară:	---

- INCORR -

Numărul EC:	---
Number ONU	---
Numărul CAS:	---
Numărul REACH:	---

3.2. Componente periculoase

Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Produce de reacție ai 2,2' oxybis etanol cu amoniac, reziduuri ai derivaților morfolinici REACH No. 01- 2119560595-31-XXXX	68909-77-3	272-712-1	20-30%	Ir. Ochi. 2	 GHS07	H319
				Toxicitate acvatică 3	Fără pictogramă	H412
Imidazolina - etoxilat oleic	---	---	5-10%	Irit. Ochi 2		H319
				Irit. Piele 2		H315
Acid Acetic REACH No. 01- 2119475328-30-XXXX	64-19-7	200-580-7	1-5%	Lichid Inflamabil 3	GHS02	H226
				Cor. Piele 1A	 GHS05	H314
Nam	CAS No.	EC No.	Q.ty	Classification	Symbols	Hazard Statements
Produce de reacție ai 2,2' oxybis etanol cu amoniac, reziduuri ai derivaților morfolinici	68909-77-3	272-712-1	20-30%	Xi - Iritant		R36
				N – Periculos pentru mediu		R52/53
Imidazolina - etoxilat oleic	---	---	5-10%	Xi - Iritant		R36/38
Acid Acetic	64-19-7	200-580-7	1-5%	No Pictogram		R10
				C - Coroziv		R35

4. MĂSURI DE PRIM AJUTOR

4.1. Descrierea măsurilor de prim ajutor

Informații generale	În acest caz de afecțiune, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	În caz de inhalare, scoateți persoana la aer curat. Supravegheați temperatura corpului și asigurați odihna.

- INCORR -

După contactul cu pielea:	Scoateți imediat îmbrăcămintea contaminată. Spălați imediat din abundență zona afectată cu apă și săpun, chiar dacă numai se suspectează. A se spăla întreg corpul prin duș sau îmbăiere.
După contactul cu ochii:	În caz de contact cu ochii, clătiți cu multă apă curată. Consultați un medic oftalmolog. Protejați ochiul nevătămat.
După înghițire:	Nu induceți voma . Consultați un medic imediat.
Alte informații:	Nu sunt date disponibile.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	Nu sunt date disponibile.
----------	---------------------------

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

Supraveghere medicală:	Nu este necesară supravegherea medicală în timpul activității la locul de muncă sau în caz de accident. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Nu sunt date disponibile.

5. MĂSURI DE COMBATERE A INCENDIILOR

5.1. Mijloace de stingere a incendiilor

Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați următoarele instrucțiuni:
Mijloace de stingere corespunzătoare:	Utilizați: apă, Dioxid de carbon.
Mijloace de stingere necorespunzătoare:	Nici unul cunoscut.
Pericole care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gaze de explozie sau de ardere.
Echipamente speciale de stingere a incendiilor	În caz de incendiu folosiți aparat pentru respirație și îmbrăcămintă de protecție.
Altele	Nu sunt date disponibile.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ

6.1. Precauții personale, echipament de protecție și proceduri de urgență

Echipament de protecție:	Purtați echipament individual de protecție
Proceduri de urgență:	Deplasați oamenii neprotejați într-o zonă sigură. Furnizați ventilație adecvată.

6.2. Precauții pentru mediul înconjurător

Mijloace de limitare:	Utilizați materiale adsorbante, organice, nisip.
Metode de limitare a poluării	Nu permiteți scurgerea în sol /subsol. Preveniți intrarea în ape de suprafață sau în sistemul de scurgere. După strângerea scurgerilor, spălați cu apă din abundență.
Informații suplimentare:	Colectați apele de spălare contaminate și eliminați-le conform reglementărilor.

6.3 Metode și material pentru izolarea incendiilor și pentru curățenie

	Nu sunt date disponibile.
--	---------------------------

6.4 Trimiteri către alte secțiuni) (trimiteri către secțiunile 8 și 13).

	A se vedea și declarațiile de la secțiunile 8 și 13.
--	--

7. MANIPULARE ȘI DEPOZITARE

7.1. Precauții pentru manipularea în condiții de securitate

Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu pielea și ochii, inhalarea de vapori sau de ceață. Nu utilizați containere goale înainte ca acestea să fie curățate. Înainte de operațiile de transfer, asigurați-vă că în containere nu sunt materiale incompatibile. Îmbrăcămintea
--	---

- INCORR -

	contaminată ar trebui schimbată atunci când se intră în zonele de servire a mesei. Atunci când se utilizează produsul, nu se mănâncă și nu se bea.
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați departe de alimente, băuturi și hrana animalelor.
Specificațiile zonei de depozitare:	Zone bine ventilate.
Specificațiile recipientilor:	Butoaie de plastic
Incompatibilități:	Nu sunt date disponibile.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Inhibitor de coroziune solubil în apă și bacteriostatic pentru fluide de prelucrare și de forare pe bază de apă

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control	
Substanță:	<i>Acid Acetic CAS No. 64-19-7</i>
TLV _{Ceiling} :	- - -
TLV _{TWA} :	10 ppm – 24,54 mg/m ³
TLV _{STEL} :	15 ppm – 36,81 mg/m ³
Limita biologică:	- - -
8.2. Controale ale expunerii profesionale	
Controale tehnice corespunzătoare :	Se recomandă ventilația generală
Protecție colectivă:	Asigurați ventilația decvată.
Protecția individuală	Respiratorie: În mod normal nu este necesară
	Ochi: Utilizați ochelari de protecție
	Mâini: Mănuși de protecție din PVC, neopren sau cauciuc.
	Corp: Îmbrăcăminte de protecție standard care asigură o protecție cuprinzătoare pentru piele, de ex: bumbac, cauciuc, PVC sau Viton.
8.3. Controlul expunerii mediului	
Scenarii de expunere	Nu sunt date disponibile.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Aspect:	Lichid clar
Starea fizică:	lichid
Culoare:	Nu sunt date disponibile
Miros:	caracteristic
Prag olfactiv:	Nu sunt date disponibile
9.2. Informații pentru sănătate, siguranță și mediu	
pH :	7
Punct de topire:	N/A
Punct de fierbere:	100°C
Punct de aprindere:	>100°C
Inflamabilitate (solid, gaz):	Nu sunt date disponibile
Temperatura de autoaprindere:	Nu sunt date disponibile
Temperatura de descompunere:	Nu sunt date disponibile.
Pericol de explozie:	Nu sunt date disponibile
Limita de inflamabilitate	Nu sunt date disponibile

- INCORR -

superioară:	
Limita inferioară de inflamabilitate:	Nu sunt date disponibile
Presiunea de vapori:	Nu sunt date disponibile.
Densitatea la 20 °C:	Nu sunt date disponibile
Densitatea aparentă (20°C)	Nu sunt date disponibile
Densitatea în vrac (Bulk)	Nu sunt date disponibile.
Densitatea relativă (20°C):	1.03
Densitatea de vapori:	Nu sunt date disponibile.
Rata de evaporare:	Nu sunt date disponibile.
Solubilitate în apă (20°C):	solubil
Coeficientul de distribuție (n-octanol):	Nu sunt date disponibile.
Vâscozitatea (40°C):	Nu sunt date disponibile
9.3. Alte informații	
Alte informații:	Nu sunt date disponibile.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil în condiții normale de utilizare. Evitați expunerea la surse de căldură.
10.2. Stabilitate chimică	
Materiale incompatibile	Oxidanți puternici
Posibilitatea de reacții periculoase:	Stabil în condiții normale
10.3. Posibilitatea de reacții periculoase	
Nu sunt date disponibile	
10.4. Condiții de evitat	
Nu sunt date disponibile.	
10.5. Materiale incompatibile	
Nu sunt date disponibile.	
10.6. Produși de descompunere periculoși	
Nu sunt date disponibile.	

11. INFORMAȚII TOXICOLOGICE	
11.1. Informații privind efectele toxicologice	
Toxicitatea amestec:	
Toxicitate Acută	
Toxicitate orală acută:	LD50 (șobolan): >2000 mg/kg.
Toxicitate inhalatorie acută:	Nu sunt date disponibile.
Toxicitate cutanată acută:	Nu sunt date disponibile
11.2. Corozivitate	
Piele:	Poate cauza ușoare iritații
Ochi:	Iritant
11.3. Iritație	
Piele:	Nu sunt date disponibile.
Ochi:	Nu sunt date disponibile.
11.4. Toxicitate la doze repetate	
Ingestie:	Nu sunt date disponibile.

- INCORR -

Inhalare:	Nu sunt date disponibile
11.5. Sensibilitate	
Piele:	Nu sunt date disponibile
Ochi:	Nu sunt date disponibile.
11.6 Cancerogenitate	
	Nu sunt date disponibile.
11.7 Mutagenitate	
	Nu sunt date disponibile.
11.8 Toxicitate pentru reproducere	
	Nu sunt date disponibile.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	Nu sunt date disponibile
Toxicitate în aer:	Nu sunt date disponibile.
Toxicitate în sol:	Nu sunt date disponibile.
12.2. Persistență și degradabilitate	
Alte informații:	Nu sunt date disponibile
12.3. Potențial de Bioacumulare	
Alte informații:	Nu sunt date disponibile
12.4. Mobilitate în sol	
Alte informații:	Nu sunt date disponibile.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	Nu sunt date disponibile.
vPvB:	Nu sunt date disponibile.
12.6. Alte efecte adverse	
Alte informații:	Nu sunt date disponibile

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Recuperați dacă este fezabil. Eliminați conform reglementărilor Directivelor Europene referitoare la deșeuri și deșeuri periculoase.
Cod de deșeu:	Nu sunt date disponibile.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Eliminare conform reglementărilor în vigoare locale și naționale.
Alte recomandări:	Nu sunt date disponibile.
	Legislația privind eliminarea deșeurilor: Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
	Legislația pentru deșeuri de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje si deșeuri de ambalaje. HG 247/2011 pentru modificarea si completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor si a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor

- INCORR -

de ambalaje.
HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	Nu sunt date disponibile.
Clasa (clasele) de pericol pentru transport	Nu sunt date disponibile.
Grupul de ambalare:	Nu sunt date disponibile.
Pericol pentru mediu	Nu sunt date disponibile.
Precauții pentru utilizatori	
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	Nu sunt date disponibile.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	Nu sunt date disponibile.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	Nu sunt date disponibile.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Reglementări naționale: Legea 319/2006 – legea referitoare la sănătatea și securitatea în muncă HG 1425/2006 consolidată – Norme de aplicare ale Legii 301/2006 HG 1218/2006 privind Stabilirea cerințelor minime de securitate și sănătate în muncă pentru asigurarea protecției lucrătorilor împotriva riscurilor legate de prezența agenților chimici HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.	
15.2 Evaluarea securității chimice	Nu a fost efectuată o evaluare a securității chimice.

16. ALTE INFORMAȚII	
16.1. Principalele surse bibliografice	
ECDIN - Environmental Chemicals Data and Information Network - Rețeaua de Informații și Date despre Substanțele Chimice utilizate în Mediul Înconjurător creată de Joint Research Centre, Commission of the European Communities - Centrul European Comun de Cercetare al Comisiei Comunităților Europene SAX's DANGEROUS PROPERTIES OF INDUSTRIAL MATERIALS - Eight Edition – Van Nostrand Reinold Istituto Superiore di Sanità - Inventario Nazionale Sostanze Chimiche-/ Institutul Superior de sănătate – Inventarul Național al Substanțelor (Italia) ACGIH - Threshold Limit Values - 2009 edition/ ACGIH – Valorile limită de prag - ediția 2009 Ghid de redactare a fișelor cu date de securitate, versiunea 2, Decembrie 2013, ECHA	
16.2. Lista frazelor de pericol și de precauție utilizate Alte informații –	
Fraze de pericol utilizate în secțiunile anterioare	
H226: Lichid și vapori inflamabili. H314: Provoacă arsuri grave ale pielii și lezarea ochilor H315: Provoacă iritarea pielii. H319: Provoacă o iritare gravă a ochilor	

- INCORR -

H412: Nociv pentru mediul acvatic cu efecte pe termen lung.

Fraze de precauție utilizate în secțiunile anterioare

P280: Purtați mănuși de protecție/îmbrăcăminte de protecție/echipament de protecție a ochilor/echipament de protecție a feței

P302+P352: ÎN CAZ DE CONTACT CU PIELEA: spălați cu multă apă și săpun.

P305+P351+P338: ÎN CAZ DE CONTACT CU OCHII: Clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

16.3. Abrevieri și acronime utilizate:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice
ECHA – Agenția Europeană pentru Substanțe Chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința Americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

EUH: declarație de pericol, care este convenită în afara sistemului global armonizat GHS

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

N/A: neaplicabil

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

Ppm: părți per milion

FSD: Fișa de Date de securitate

STOT SE: Toxicitate asupra unui organ țintă specific – o singură expunere

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații –

16.4.1 Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul EU 453/2010/. Această fișă anulează și înlocuiește orice ediție precedentă. Modificările intervenite între două ediții ale unei FDS sunt ținute sub control la producător.

16.4.2 Clauze de exonerare de răspundere

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document. Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

- INCORR -

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere conform celor indicate în fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță pentru utilizarea intenționată declarată. Este responsabilitatea utilizatorului să se asigure că este în posesia ultimei ediții a fișei de securitate.

16.4.3 Răspundere

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate cu excepția acelor informații din secțiunile 1, 13, 15 și 16 care au fost armonizate cu legislația română în vigoare. De asemenea, structura fișei de securitate a fost armonizată cu structura din Anexa II B a Regulamentului UE 1907/2008.

Răspunderea pentru conținutul versiunii în limba engleză al acestei FDS aparține Ava S.p.A.

Răspunderea pentru traducerea în limba română a reviziei 3 a acestei FDS și armonizarea cu cerințele legislației române la secțiunile mai sus indicate , aparține AVA EASTERN EUROPE D.F & S srl prin Compartimentul QSHE și Isabela NIȚĂ, inginer chimist.

Sfârșitul fișei de securitate

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Mutați victima la aer. Dacă simptomele persistă, chemați medicul. În caz de întrerupere a respirației, administrați oxigen.
După contactul cu pielea:	Îndepărtați imediat îmbrăcămintea și încălțăminte contaminată. Spălați imediat cu apă din abundență.
După contactul cu ochii:	Clătiți ochii cu apă cel puțin 15 minute. Consultați medicul dacă apare iritația ochilor sau persistă. Îndepărtați lentilele de contact.
După înghițire:	Nu induceți vomă fără aviz medical. Nu administrați nimic pe gură la o persoană în stare de inconștiență. Consultați un medic dacă este necesar.
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Iritatie mecanica
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i această Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu, respectați instrucțiunile.
Mijloace de stingere corespunzătoare:	Apa pulverizată, pulbere ABC
Mijloace de stingere necorespunzătoare:	Nu utilizați niciodată jet de apă
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Monoxid de carbon și dioxid de carbon
Echipamente speciale de stingere a incendiilor	Aparat respirator și costum de protecție, dacă este necesar
Recomandări destinate pompierilor:	N.a.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Evitați formarea de praf
Proceduri de urgență:	Evitați respirația de praf și contactul cu ochii
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Pastrati in recipiente corespunzatoare, inchise pentru eliminare
Metode de limitare a poluării	Utilizați m. tura i lopata. Îndepărtați dacă este posibil cu un sistem vidat pentru a preveni generarea de praf
Informații suplimentare:	N.a.

**- NATROSOL 250HHR-P -**

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați formarea de praf. Nu inspirați vaporii / praful. Fumatul, mâncatul și băutul sunt interzise Mențineți o bună curatenie. Nu permiteți acumularea de straturi de praf, de exemplu, pe podele, proeminente și echipamente, pentru a se evita orice potențiale pericole legate de praf. Materialul poate acumula sarcină statică și, prin urmare, poate provoca aprindere electrică a atmosferei inflamabile Asigurați-vă că toate echipamentele au pământare și sunt corespunzător conectate electric, înainte de a începe operațiunile de transfer
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați într-un loc răcoros, bine ventilat. Păstrați recipientul închis ermetic
Specificațiile zonei de depozitare:	Păstrați într-un loc răcoros, bine ventilat.
Specificațiile recipientilor:	Pastrati recipientul ermetic inchis .
Incompatibilități:	N.a.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Stabilizator de șist pentru fluide de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Amestec		
TLV _{Ceiling} :		---
TLV _{TWA} :		---
TLV _{STEL} :		---
Limita biologică:		---
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilația adecvata este recomandata.
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.		Asigurați ventilație adecvata. Stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie:	În general nu este necesara.
	Ochi	Ochelari de protecție.
	Maini	Manusi de protecție
	Corp	Îmbracaminte de protecție standard.
8.3. Controlul expunerii mediului		
Variante de expunere		N.a.

**- NATROSOL 250HHR-P -**

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Granule, pulbere, solid
Aspect:	Pulbere
Culoare:	Aproape alb
Miros:	Inodor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH:	6.0 – 8.5; 2% (soluție apoasă)
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	120°C
Temperatura de aprindere:	460°C
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	1,38 g/cm ³
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	N.a.
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.
10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Expunere la lumina soarelui
10.2. Stabilitate chimică	
Materiale incompatibile:	Acizi, baze și agenți oxidanți
Posibilitatea de reacții periculoase:	Pulberi organice la o concentrație suficientă pot forma amestecuri explozive în aer
10.3. Produse de descompunere periculoase	
Alte informații:	Monoxid de carbon și dioxid de carbon

**- NATROSOL 250HHR-P -**

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea amestecului	
Toxicitate orală acută:	N.a.
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Incet biodegradabil
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Consultati un firma cu licență în vederea eliminării conform reglementărilor locale. Nu deversați în sistemul de canalizare sau în mediu, eliminați la un punct de colectare a deșeurilor autorizat
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	N.a.

**14. INFORMAȚII REFERITOARE LA TRANSPORT****14.1. Transport rutier / feroviar (ADR / RID)**

Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.

14.2. Transport Maritim (IMDG)

Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Poluant marin:	N.a.

14.3. Transport Aerian (ICAO-TI și IATA-DGR)

Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa IATA	N.a.

14.4. Transport în vrac

Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE**15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

**- NATROSOL 250HHR-P -**

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de precauție / siguranța utilizate în secțiunile anterioare**

P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S22: A nu se inspira praful.

S28: În caz de contact cu pielea: spălați cu multă apă și săpun

Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:		
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful.	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Substanță					
Conținut:	În conformitate cu tabelul următor					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Bicarbonat de sodiu REACH No. 01-2119457606-32-XXXX	144-55-8	205-633-8	>=98%	---	---	---

**- SODIUM BICARBONATE -**

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În caz de afectare, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Solicitați asistență medicală pentru orice dificultăți de respirație.
După contactul cu pielea:	Scoateți hainele și faceți un duș. Solicitați imediat asistență medicală.
După contactul cu ochii:	Spălați-vă bine cu apă din abundență pentru cel puțin 15 minute. Solicitați sfatul medicului imediat.
După înghițire:	Nu induceți vomă. Beți apă.
Alte informații:	- - -
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i această Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați următoarele instrucțiuni
Mijloace de stingere corespunzătoare:	Utilizare: spray de apă, spumă, pulbere, CO2
Mijloace de stingere necorespunzătoare:	Niciunul în mod special
Riscuri care derivă din ardere (produse de descompunere termică periculoși):	Nu respirați produse de combustie (oxidul de carbon, produse de piroliză toxice etc.)
Echipamente speciale de stingere a incendiilor	N.a.
Altele	În caz de incendiu, purtați îmbrăcăminte de protecție completă

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție adecvat. Evitați generarea de praf
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Colectați mecanic și eliminați restul folosind jeturi de apă
Metode de limitare a poluării	Pastrati containerele închise
Informații suplimentare:	Nu se va deversa în apele de suprafață sau în sistemul de canalizare

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați medii umede. Manipulați în zone bine ventilate
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	A se păstra în recipiente închise, la distanță de surse de căldură
Specificațiile zonei de depozitare:	Depozitați în zone racoroase și uscate
Specificațiile recipientilor:	Pastrati containerele închise

**- SODIUM BICARBONATE -**

Incompatibilități:	N.a.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Regulator de duritate

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Substanță	Bicarbonat de sodiu CAS No. 144-55-8	
TLV _{Celing} :	---	
TLV _{TWA} :	TWA = 10mg/m ³	
TLV _{STEL} :	---	
Limita biologică	---	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilatia generala este recomandata
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Asigurați ventilatie adecvata
Protecția individuală	Respiratorie:	Nu este necesară
	Ochi	Nu este necesară
	Maini	Nu este necesară
	Corp	Nu este necesară
8.3. Controlul expunerii mediului		
Variante de expunere		N.a.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Solid
Aspect:	Pulbere
Culoare:	Albă
Miros:	Inodor
Prag olfactiv:	Niciunul
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 g/l) la 25 °C:	8.5
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Temperatura de descompunere	>60°C
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	Nu este inflamabil
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	N.a.

**- SODIUM BICARBONATE -**

Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	9.6 g 100 ml
Solubilitate	N.a.
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	1.2 mPa.s
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE**10.1. Reactivitate**

Condiții care trebuie evitate:	Nici una în mod special
--------------------------------	-------------------------

10.2. Stabilitate chimică

Materiale incompatibile:	Acizi
Posibilitatea de reacții periculoase:	Niciuna

10.3. Produși de descompunere periculoși

Alte informații:	Descompunerea termică sau în caz de incendiu poate elibera gaze și vapori potențial periculoși pentru sănătate
------------------	--

11. INFORMAȚII TOXICOLOGICE**11.1. Toxicitate Acută**

<u>Toxicitatea amestecului</u>	<u>Sodium bicarbonate CAS No. 144-55-8</u>
Toxicitate orală acută:	DL50 (Șobolan): > 4.000 mg/kg
Toxicitate inhalatorie acută:	CL50 (Șobolan): > 4,74 mg/l
Toxicitate cutanată acută:	N.a.

11.2. Corozivitate

Piele:	N.a.
Ochi:	N.a.

11.3. Iritabilitate primară

Piele:	N.a.
Ochi:	N.a.

11.4. Nocivitate

Ingestie:	N.a.
Inhalare:	N.a.

11.5. Sensibilitate

Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE**12.1. Toxicitate**

Toxicitate în apă:	EC50 (Daphnia magna) 48h: 4100 mg/l LC50 (Iepomis macorchirus) 96h: 7100 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.

12.2. Persistență și degradabilitate

Degradare abiotică:	Apa hidrolizează. Rezultat: Raportul Acid / baza este în funcție de pH
Degradare biologică:	Metode de determinare a biodegradabilității nu sunt aplicabile la substanțele anorganice

**- SODIUM BICARBONATE -**

12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Recuperati substanta dacă este posibil. Eliminati în conformitate cu reglementările locale și naționale
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Eliminati în conformitate cu reglementările locale și naționale
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	

**- SODIUM BICARBONATE -**

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)
Regulament (CE) nr.1907/2006 (REACH) Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.
Reglementări naționale: Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice. Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase. REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase; HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase; REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006. Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008). REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH). Regulament 552/2009 de modificare a anexei XVII din Regulamentul (CE) nr.1907/2006 – REACH privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase HG 735/2006 privind limitarea emisiei de compuși organici volatili. HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații. Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase; HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă. REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor. HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei. HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006. O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.
Legislația privind eliminarea deșeurilor: Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

**- SODIUM BICARBONATE -**

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioaccumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioaccumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:	P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful. S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S 24/25: Evitați contactul cu pielea și ochii.	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Substanță					
Conținut:	În conformitate cu tabelul următor					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Sulfat de bariu REACH No. 01-2119491274-35-XXXX	7727-43-7	231-784-4	100%	---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Obțineți asistență medicală pentru orice dificultăți de respirație.
După contactul cu pielea:	Spălați zona expusă cu apă și săpun. Obțineți sfatul medicului în cazul apariției de iritații

**- BARITE -**

După contactul cu ochii:	Spălați-vă bine cu apă de la robinet. Obțineți sfatul medicului în cazul apariției de iritații.
După înghițire:	A se bea mai multe pahare de apă pentru a dilua cantitatea de produs înghițită. În cazul în care au fost înghițite cantități mari, solicitați asistență medicală.
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	N.a.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați instrucțiunile de mai jos:
Mijloace de stingere corespunzătoare:	Nu este inflamabil, nu este exploziv
Mijloace de stingere necorespunzătoare:	N.a.
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu se consideră a fi un pericol de explozie
Echipamente speciale de stingere a incendiilor	N.a.
Altele	În caz de incendiu, purtați îmbrăcăminte de protecție și aparat de respirat autonom certificat NIOSH, care acoperă fața complet, și care funcționează în funcție de cererea de presiune sau într-un alt mod de presiune pozitivă.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament de protecție PPE corespunzător. Aerisiți zona de scurgere sau deversare. Purtați echipament individual de protecție adecvat. Mătura și depozitați în containere pentru recuperare sau eliminare. Aspirarea sau maturarea umedă pot fi folosite pentru a evita dispersarea prafului
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	N.a.
Metode de limitare a poluării	Evitați maturarea uscată prin pulverizare cu apă sau utilizarea unui sistem vidat pentru a preveni formarea de praf. Rețineți că bentonita poate fi alunecoasă în condiții de umiditate.
Informații suplimentare:	Nu se așteaptă să apară reacții adverse.

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați formarea de praf. Asigurați ventilație adecvată în locurile unde se formează praf. În caz de ventilație insuficientă purtați echipament de protecție respiratorie adecvată
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Asigurați o ventilație adecvată și depozitați pentru a preveni deteriorarea accidentală. A se feri de umiditate
Specificățiile zonei de depozitare:	Depozitați într-un loc răcoros și uscat.
Specificățiile recipientilor:	Pastrati containerele ermetic închise

**- BARITE -**

Incompatibilități:	N.a.
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent de ingreunare pentru fluide de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ**8.1. Parametri de control (Limite de expunere)**

Substanță	
TLV _{Ceiling} :	---
TLV _{TWA} :	---
TLV _{STEL} :	---
Limita biologică	---

8.2. Controale ale expunerii profesionale

8.2.1. Controale tehnice corespunzătoare	Asigurați ventilație adecvată
---	-------------------------------

8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.	Ventilația generală este recomandată
--	--------------------------------------

Protecția individuală	Respiratorie:	În mod normal nu este necesară. Evitați generarea de praf. În caz de expunere praf purtați mască de praf, minim tip FFP1
	Ochi	Ochelari de protecție recomandați.
	Maini	Purtați mănuși de protecție
	Corp	Îmbrăcămintă curată care acoperă corpul.

8.3. Controlul expunerii mediului

Variante de expunere	N.a.
----------------------	------

9. PROPRIETĂȚI FIZICE ȘI CHIMICE**9.1. Informații generale**

Forma:	Solid
Aspect:	Pulbere sau granular
Culoare:	Roșu
Miros:	Inodor
Prag olfactiv:	N.a.

9.2. Informații pentru sănătate, siguranță și mediu

pH (10 g/l) la 20 °C:	N.a.
Punct de topire:	1580° C
Punct de fierbere:	N.a.
Punct de aprindere:	Nu este inflamabil.
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	Nu este exploziv
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	4,2-4,4 gr/cm ³
Densitatea de vapori:	N.a.

**- BARITE -**

Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Neglijabila
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Chimic stabil, fara incompatibilitati speciale
10.2. Stabilitate chimică	
Materiale incompatibile:	Niciunul in mod particula
Posibilitatea de reacții periculoase:	N.a.
10.3. Produși de descompunere periculoși	
Alte informații:	La temperaturi mai mari de 1580 ° C se descompune si emite vapori toxici

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Substanța	Sulfat de Bariu CAS No.7727-43-7
Toxicitate orală acută:	N.a.
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	Nu este iritant
Ochi:	Moderat iritant
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Nu este persistent
12.3. Potențial de Bioacumulare	
Alte informații:	Nu este bio-acumulativ
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	

**- BARITE -**

PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Materialul trebuie să fie îngropat pentru a preveni eliberarea de praf respirabil. Reciclarea ar trebui să fie preferată decât eliminarea
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Nici unul în mod special. În orice caz, trebuie evitată formarea de reziduuri de praf de ambalaj și trebuie garantată o protecție adecvată a lucrătorilor. Reciclarea și eliminarea ambalajelor trebuie să fie efectuată de o societate de management adecvat al deșeurilor
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr. 1907/2006 (REACH)	
Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	

**- BARITE -****Reglementări naționale:**

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

**- BARITE -**

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol / siguranța utilizate în secțiunile anterioare**

P260: Nu inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

S22: A nu se inspira praful.

S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.

S 24/25: Evitați contactul cu pielea și ochii.

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		

**- AVABENTOIL HY -**

Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:	P261: Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță::	S22: A nu se inspira praful. S51: Folosiți numai zone în bine ventilate	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTĂȚI						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul următor:					
Formula moleculară:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul ONU:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Sare de bentonita ditallodimetilamoniu (Ditallodimethylammonium salt of bentonite)	68153-30-0	273-219-4	100%	---	---	---
Siliciu cristalin (Crystalline Silica)	14808-60-7	238-878-4	< 5%	STOT RE 1	 GHS08	H372

**- AVABENTOIL HY -**

Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Sare de bentonita ditallodimetilamoniu <i>(Ditallodimethylammonium salt of bentonite)</i>	68153-30-0	273-219-4	100%	---	---	---
Siliciu cristalin <i>(Crystalline Silica)</i>	14808-60-7	238-878-4	< 5%	Xn - nociv		R48/20
Notă: Acest produs conține o cantitate mai mică de 1% de cuarț respirabil. Cuarț respirabil este clasificat ca si STOT RE 1						

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară / la aer curat. Tratați simptomele. Adresați-vă unui medic.
După contactul cu pielea:	Scoateți imediat toate hainele contaminate. Spălați-vă imediat cu apă și săpun.
După contactul cu ochii:	Clătiți bine cu apă. Dacă iritația persistă, adresați-vă unui medic.
După înghițire:	Clătiți imediat gura bine cu apă de mai multe ori. Dacă este necesar adresați-vă unui medic.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	N.a.
----------	------

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu, respectați instrucțiunile.
Mijloace de stingere corespunzătoare:	În caz de incendiu utilizați ceata, spumă, produse chimice uscate, bioxid de carbon CO ₂
Mijloace de stingere necorespunzătoare:	Evitați jeturi de apă
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Mediu aerian cu concentrație de praf mai mare de 50 g / m ³ se poate aprinde la 470 ° C
Echipamente speciale de stingere a incendiilor	Aparat respirator și îmbrăcăminte de protecție.
Recomandări destinate pompierilor:	---

**- AVABENTOIL HY -**

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ		
6.1. Precauții personale, echipament de protecție și proceduri de urgență		
Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezonul)	
Proceduri de urgență:	Nu respirați praf. Produsul este foarte alunecos atunci când este umed.	
6.2. Precauții pentru mediul înconjurător		
Medii de izolare:	Îndepărtați dacă este posibil cu un sistem de vidare, pentru a preveni generarea de praf	
Metode de limitare a poluării	Pentru scurgeri mari, umeziti cu apă pentru a reduce depunerea prafului, maturati si eliminati în conformitate cu reglementările locale	
Informatii suplimentare:	N.a.	
7. MANIPULARE ȘI DEPOZITARE		
7.1. Precauții pentru manipularea în condiții de securitate		
Precauții pentru manipulare în condiții de securitate:	Evitati generarea de praf. A nu se inspira praful. A se evita acumularea de praf pe suprafețe pentru a preveni riscul de explozie.	
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități		
Condiții de depozitare:	Evitati acumularea de încărcare electrostatică și echipamente terestre. Utilizați o mască de praf.	
Specificațiile zonei de depozitare:	Păstrați în zone uscate, bine ventilate	
Specificațiile recipientilor:	Recipiente închise ermetic	
Incompatibilități:	N.a.	
7.3. Utilizare finală specifică:		
Utilizări finale specifice:	Agent de creștere a vâscozității pentru fluide de foraj pe bază de ulei (OBM)	
8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control (Limite de expunere)		
Substanța	Siliciu cristalin (Crystalline silica) CAS No. 14808-60-7	
TLV _{Ceiling} :	- - -	
TLV _{TWA} :	Praf (fracțiune inhalabilă): TLV-TWA = 10 mg/m3 Praf (fracțiune respirabilă): TLV-TWA = 3.0 mg / m³	
TLV _{STEL} :	- - -	
Limita biologică:	- - -	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Ventilația generală este recomandată.
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Stație de spălare ochi. Disponibilitatea de duș de urgență.
Protecția individuală	Respiratorie:	In mod normal un este necesara
	Ochi	Ochelari de protecție.
	Maini	Mănuși de protecție
	Corp	Recomandată îmbrăcăminte de protecție
8.3. Controlul expunerii mediului		
Variante de expunere	N.a.	

**- AVABENTOIL HY -**

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Crema
Aspect:	Crema pulbere
Culoare:	N.a.
Miros:	Usor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH:	N.a.
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	N.a.
Inflamabilitate (solid, gaz):	470°C
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	N.a.
Densitatea aparentă (20°C):	N.a.
Densitatea relativă:	700-800 Kg/m ³
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Neglijabila
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.
10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil în condiții normale de depozitare și manipulare
10.2. Stabilitate chimică	
Materiale incompatibile:	Agenti oxidanți puternici
Posibilitatea de reacții periculoase:	Niciuna
10.3. Produși de descompunere periculoși	
Alte informații:	Poate elibera oxizi de azot și monoxid de carbon prin ardere. Debutul descompunerii organice este la 220 ° C
11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea amestecului	
Toxicitate orală acută:	LD50 (Sobolan): >5000 mg/kg
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.

**- AVABENTOIL HY -**

11.2. Corozivitate	
Piele:	Non-iritant pe piele nesensibilizata
Ochi:	Iritant numai din cauza efectelor de abraziune fizica ale pulberii
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	Poate cauza usoara iritabilitate respiratorie
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	N.a.
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	Porțiunea organică a produsului este biodegradabil. Bentonita nu se va degrada, ci este un mineral natural
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Contactați o firmă autorizată în vederea eliminării în conformitate cu reglementările locale. Nu deversați în sistemul de canalizare sau în mediul înconjurător, eliminați la un punct autorizat de colectare a deșeurilor.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Eliminați în conformitate cu reglementările locale și naționale
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Normele de transport ONU:	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.

**- AVABENTOIL HY -**

Pericol pentru mediu	N.a.
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Poluant marin:	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa IATA	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE**15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solvenților organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

**- AVABENTOIL HY -**

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

**- AVABENTOIL HY -****16.3. Abrevieri și acronime:**

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H372: Poate provoca afectări ale organelor în caz de expunere repetată sau prelungită

R48/20: Nociv, pericol de efecte grave asupra sănătății la expunere prelungită prin inhalare

Fraze de siguranță utilizate în secțiunile anterioare

P261: Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

S22: A nu se inspira praful.

S51: Folosiți numai zone în bine ventilate

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
ACEST AMESTEC NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI:		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
-	-	-
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	Nu este clasificat ca fiind periculos în conformitate cu Regulamentul(UE) nr. 1272/2008
Fraze de precauție:	P260: Nu respirați praf/fum/gaz/ceață/vapori/spray. P280: Purtați mănuși protectoare/ echipament de protecție/ protejați ochii/fața	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul de mai jos					
Formula moleculară:	---					
Numărul EC:	---					
Number ONU	---					
Numărul CAS:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
calcar	1317-65-3	---	≥10-15%	-	-	-

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți persoana la aer curat. În caz de expunere prelungită, cereți sfatul medicului
După contactul cu pielea:	Scoateți îmbrăcămintea contaminată. Spălați zona afectată cu apă din abundență.
După contactul cu ochii:	Clătiți imediat ușor cu multă apă. Dacă persistă iritarea, solicitați asistență medicală.
După înghițire:	Clătiți-vă gura cu apă. Solicitați asistență medicală dacă este necesar.
Alte informații:	Nu sunt date disponibile
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Nu sunt date disponibile
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În

- AVABIOFIL HT -

	caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Nu sunt date disponibile

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați, urmați instrucțiunile.
Mijloace de stingere corespunzătoare:	În caz de incendiu utilizați jeturi/spray-uri de apă.
Mijloace de stingere necorespunzătoare:	Nici
Pericole care derivă din ardere (produși de descompunere termică periculoși):	În condiții de incendiu se descompune în oxid de calciu, dioxid de carbon, monoxid de carbon și polimeri. Fumul poate conține fragmente de polimeri de varii compoziții și produși neidentificați toxici sau iritanți.
Echipamente speciale de stingere a incendiilor	Nu sunt date disponibile
Altele	În caz de incendiu, purtați echipament de protecție corespunzător și utilizați un aparat care să permită respirația și să vă protejeze întreaga față.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție (PPE). Evitați să respirați praf. Materialul poate crea condiții de alunecare.
Proceduri de urgență:	Nu aruncați în ape de suprafață sau în sisteme de canalizare
6.2. Precauții pentru mediul înconjurător	
Mijloace de limitare:	Îndepărtați produsul dacă este posibil cu un sistem de vacuum pentru a preveni generarea prafului. Păstrați produsul în ambalaje potrivite și închise pentru eliminare.
Metode de limitare a poluarii	Curățați depunerile prin periere sau vacuum și colectați în containere potrivite pentru eliminare. Ridicați containerele și desfășurați eliminarea fără a provoca praf.
Informatii suplimentare:	Nu sunt date disponibile

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Evitați generarea prafului. Nu respirați praf. Evitați acumularea de praf pe suprafețe pentru a preveni riscul de explozie.
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Evitați acumularea sarcinilor electrostatice în echipamentele de pe teren. Utilizați o mască de praf.
Specificățiile zonei de depozitare:	Depozitați în zone uscate și bine ventilate, în containere închise etanș.
Specificățiile pentru recipienti:	Utilizați saci multistratificați cu peliclă interioară de PE. Păstrați sacii închiși.
Incompatibilități:	Nu sunt date disponibile
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Flui reducător a pierderilor de fluid pentru fluide de foraj

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control	
TLV _{Cel} :	---

- AVABIOFIL HT -

TLV _{TWA} :	Praf (fracția inhalată): TLV-TWA = 10 mg/m ³ Praf (fracția respirată): TLV-TWA = 5.0 mg / m ³	
TLV _{STEL} :	- - -	
Limita biologică:	- - -	
8.2. Controale ale expunerii profesionale		
Controale tehnice corespunzătoare:	Ventilație generală este cerută.	
Protecție colectivă:	Spălătoare pentru ochi în apropiere, dușuri.	
Protecția individuală	Respiratorie:	Protecția nu este necesară în mod normal.
	Ochi	Se recomandă ochelari de protecție
	Maini	Mănuși
	Corp	Îmbrăcăminte de protecție standard
8.3. Controlul expunerii mediului		
Scenarii de expunere	Nu sunt date disponibile	

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Aspect:	solid
Starea fizică:	pulbere
Culoare:	alb
Miros:	inodor
Prag olfactiv:	Nu sunt date disponibile
9.2. Informații pentru sănătate, siguranță și mediu	
pH (10 gr/l) la 20 °C:	Nu sunt date disponibile
Punct de topire:	Se descompune la aprox. 200 °C
Punct de fierbere:	N/A
Punct de aprindere:	Nu sunt date disponibile
Inflamabilitate (solid, gaz):	Nu sunt date disponibile
Temperatura de autoaprindere:	Nu sunt date disponibile
Temperatura de descompunere:	Nu sunt date disponibile
Pericol de explozie:	Nu sunt date disponibile
Limita de inflamabilitate superioară:	Nu sunt date disponibile
Limita inferioară de inflamabilitate:	Nu sunt date disponibile
Presiunea de vapori:	Nu sunt date disponibile.
Densitatea la 20 °C:	0.91-0.96 g/cm ³
Densitatea în vrac (Bulk)	Nu sunt date disponibile
Densitatea relativă (20°C):	Nu sunt date disponibile
Densitatea de vapori:	Nu sunt date disponibile
Rata de evaporare:	Nu sunt date disponibile
Solubilitate în apă (20°C):	insolubil
Coeficientul de distribuție (n-octanol):	Nu sunt date disponibile
Vâscozitatea (40°C):	Nu sunt date disponibile
9.3. Alte informații	
Alte informații:	Nu sunt date disponibile

10. STABILITATE ȘI REACTIVITATE

- AVABIOFIL HT -

10.1. Reactivitate	
Condiții care trebuie evitate:	A se păstra la distanță de căldură, flăcări, scântei și alte surse de aprindere sau de căldură excesivă.
10.2. Stabilitate chimică	
Materiale incompatibile:	Acizi, săruri de amoniu, săruri de aluminiu, fluoruri, agenți oxidanți puternici.
Posibilitatea de reacții periculoase:	Nu se înregistrează reacții periculoase.
10.3. Produși de descompunere periculoși	
Alte informații:	Oxid de calciu, dioxid de carbon și monoxid de carbon
10.4. Condiții de evitat	
Nu sunt date disponibile.	
10.5. Materiale incompatibile	
Nu sunt date disponibile.	
10.6. Produși de descompunere periculoși	
Nu sunt date disponibile.	

11. INFORMAȚII TOXICOLOGICE	
11.1. Informații privind efectele toxicologice	
Toxicitatea substanței:	Calcar , CAS No. 1317-65-3
Toxicitate orală acută:	LD50 (șobolan): 6450 mg/kg
Toxicitate inhalatorie acută:	Nu sunt date disponibile
Toxicitate cutanată acută:	Nu sunt date disponibile
11.2. Corozivitate	
Piele:	Nu sunt date disponibile
Ochi:	Nu sunt date disponibile
11.3. Iritabilitate primară	
Piele:	Nu sunt date disponibile
Ochi:	Nu sunt date disponibile
11.4. Nocivitate	
Ingestie:	Nu sunt date disponibile
Inhalare:	Nu sunt date disponibile
11.5. Sensibilitate	
Piele:	Nu sunt date disponibile
Ochi:	Nu sunt date disponibile

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitate în apă:	Nu sunt date disponibile
Toxicitate în aer:	Nu sunt date disponibile
Toxicitate în sol:	Nu sunt date disponibile
12.2. Persistență și degradabilitate	
Alte informații:	Nu sunt date disponibile
12.3. Potenția Bioacumulativ	
Alte informații:	Nu sunt date disponibile
12.4. Mobilitate în sol	
Alte informații:	Nu sunt date disponibile
12.5. Resultatele evaluării PBT și vPvB	
PBT:	Nu sunt date disponibile

- AVABIOFIL HT -

vPvB:	Nu sunt date disponibile
12.6. Alte efecte adverse	
Alte informații:	Nu sunt date disponibile

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Consultați un furnizor licențiat pentru eliminare conform reglementărilor locale. Nu eliminați în sistemele de scurgere sau în mediu. Eliminați final la un punct de colectare autorizat.
Cod de deșeu:	Nu sunt date disponibile
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Ambalajele care nu pot fi curățate trebuie să fie eliminate ca deșeuri periculoase.
Alte recomandări:	Eliminați în conformitate cu reglementările locale și naționale
	Legislația privind eliminarea deșeurilor: (trece la 13) Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
	Legislația pentru deșeuri de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje si deșeuri de ambalaje. HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor si a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările in transport
Norme de transport ONU	Nu sunt date disponibile
Clasa (clasele) de pericol pentru transport	Nu sunt date disponibile
Grupul de ambalare:	Nu sunt date disponibile
Pericol pentru mediu	Nu sunt date disponibile
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările in transport
Poluant marin:	Nu sunt date disponibile
14.3. Transport Aerian (ICAO-TI si IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările in transport
Clasa IATA	Nu sunt date disponibile
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările in transport
Codul IBC:	Nu sunt date disponibile

- AVABIOFIL HT -

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Reglementări naționale: Legea 319/2006 – legea referitoare la sănătatea și securitatea în muncă HG 1425/2006 consolidată – Norme de aplicare ale Legii 301/2006 HG 1218/2006 privind Stabilirea cerințelor minime de securitate și sănătate în muncă pentru asigurarea protecției lucrătorilor împotriva riscurilor legate de prezența agenților chimici HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.	
15.2 Evaluarea securității chimice	Nu a fost efectuată o evaluare a securității chimice.

16. ALTE INFORMAȚII	
16.1. Principalele surse bibliografice	
ECDIN - Environmental Chemicals Data and Information Network - Rețeaua de Informații și Date despre Substanțele Chimice utilizate în Mediul Înconjurător creată de Joint Research Centre, Commission of the European Communities - Centrul European Comun de Cercetare al Comisiei Comunităților Europene

Ghid de redactare a fișelor cu date de securitate, versiunea 2, Decembrie 2013, ECHA	
16.2. Lista frazelor de pericol și de precauție utilizate Alte informații –	
Fraze de pericol utilizate în secțiunile anterioare	
- -	
Fraze de precauție utilizate în secțiunile anterioare	
P260: Nu respirați praf/fum/gaz/ceață/vapori/spray.	
P280: Purtați mănuși protectoare/ echipament de protecție/ protejați ochii/fața	
P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare	
16.3. Abrevieri și acronime utilizate:	
ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase	
RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate	
GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice	
ECHA – Agenția Europeană pentru Substanțe Chimice	
EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente	
CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)	
CSA: Chemical Safety Assessment – Evaluarea Securității Chimice	
ACGIH: American Conference of Industrial Hygienists - Conferința Americană de Sănătate Publică	
EC50: median effective concentration - concentrația efectivă medie	
LC50: median lethal concentration - concentrația letală medie	
LD50: median lethal dose - doză letală medie	
N/A: neaplicabil	
NOEC: no observable effect concentration – concentrația fără efect observat	
P.E: Polietilenă	
PNEC: predicted no-effect concentration - concentrația fără efect prevăzut	
PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice	
FSD: Fișa de Date de securitate	
vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative	
TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore	

- AVABIOFIL HT -

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații –

16.4.1 Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul EU 453/2010/. Această fișă anulează și înlocuiește orice ediție precedentă. Modificările intervenite între două ediții ale unei FDS sunt ținute sub control la producător.

16.4.2 Clauze de exonerare de răspundere

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document. Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere conform celor indicate în fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță pentru utilizarea intenționată declarată. Este reponsabilitatea utilizatorului să se asigure că este în posesia ultimei ediții a fișei de securitate.

16.4.3 Răspundere

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate cu excepția acelor informații din secțiunile 1, 13, 15 și 16 care au fost armonizate cu legislația română în vigoare. De asemenea, structura fișei de securitate a fost armonizată cu structura din Anexa II B a Regulamentului UE 1907/2008.

Răspunderea pentru conținutul versiunii în limba engleză al acestei FDS aparține Ava S.p.A.

Răspunderea pentru traducerea în limba română a reviziei 3 a acestei FDS și armonizarea cu cerințele legislației române la secțiunile mai sus indicate , aparține AVA EASTERN EUROPE D.F & S srl prin Compartimentul QSHE și Isabela NIȚĂ, inginer chimist.

Sfârșitul fișei de securitate

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
<i>Indicarea de pericole specifice pentru om și mediul înconjurător:</i>		
ACEST AMESTEC ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI:		
<i>Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)</i>		
		Irit. Piele 2 H315: Provoacă iritarea pielii

- AVOIL DW -

	GHS07	Irit. Ochi 2 H319: Provoacă o iritare gravă a ochilor
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	 GHS07 EUH208	Irit. Piele 2 H315: Provoacă iritarea pielii
		Irit. Ochi 2 H319: Provoacă o iritare gravă a ochilor Conține dietilentriamina. Poate provoca o reacție alergică
Fraze de precauție:	P264 Spălați-vă bine fața, mâinile și pielea expusă după utilizare P280: Purtați mănuși de protecție/îmbrăcăminte de protecție/echipament de protecție a ochilor/echipament de protecție a feței P302+P352: ÎN CAZ DE CONTACT CU PIELEA: Spălați cu multă apă și săpun P305+P351+P338: ÎN CAZ DE CONTACT CU OCHII: Clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	amestec					
Conținut:	În conformitate cu tabelul de mai jos					
Formula moleculară:	---					
Numărul EC:	---					
Number ONU	---					
Numărul CAS:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Dipropilen glicol, monoetil eter REACH No. 01-2119450011-60-XXXX	34590-94-8	252-104-2	50-100%	---	---	---

4. MĂSURI DE PRIM AJUTOR	
4.1. Descrierea măsurilor de prim ajutor	
Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	În caz de inhalare, scoateți persoana la aer curat și țineți-o într-o poziție confortabilă pentru respirat. Dacă sunt dificultăți de respirație, administrați oxigen
După contactul cu pielea:	Spălați imediat din abundență zona afectată cu apă și săpun. Dacă iritațiile continuă, consultați un medic.
După contactul cu ochii:	În caz de contact cu ochii, clătiți cu multă apă curată în timp ce țineți pleoapele deschise. Dacă iritațiile continuă, consultați un medic.
După înghițire:	Nu înghițiți, consultați un medic și arătați această Fișă cu Date de Securitate. Nu induceți vomă fără sfat medical. Niciodată nu administrați ceva pe gură unei persoane aflată în inconștiență.
Alte informații:	Evitați contactul cu pielea și ochii.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Iritații severe la ochi. Iritarea mucoaselor. Înroșiri. Inflamarea țesuturilor. Poate cauza reacții alergice ale pielii.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Nu este necesară supravegherea medicală în timpul activității la locul de muncă sau în caz de accident. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Tratați simptomele.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați următoarele instrucțiuni:
Mijloace de stingere	Dioxid de carbon, pulbere, spumă rezistentă la alcoolii, nisip uscat.

- AVOIL DW -

corespunzătoare:	
Mijloace de stingere necorespunzătoare:	Nu sunt
Pericole care derivă din ardere (produși de descompunere termică periculoși):	Oxizi de carbon, oxizi de azot.
Echipamente speciale de stingere a incendiilor	Aparat pentru respirație de utilizat în timpul incendiului, dacă este necesar.
Altele	Se emite fum toxic în caz de incendiu.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ

6.1. Precauții personale, echipament de protecție și proceduri de urgență

Echipament de protecție:	Purtați echipament individual de protecție
Proceduri de urgență:	Țineți oamenii departe de zona unde a apărut scurgerea/emisia.

6.2. Precauții pentru mediul înconjurător

Mijloace de limitare:	Limitați scurgerile cu materiale absorbante (nisip, silicagel, absorbant pentru acizi, absorbant universal, rumeguș).
Metode de limitare a poluării	Strângeți în containere potrivite pentru eliminare. Preveniți intrarea produselor în sistemul de scurgere. Curățați zona contaminată cu grijă. Autoritățile locale ar trebui anunțate dacă cantități importante de produs scurs nu pot fi ținute sub control și curățate.
Informații suplimentare:	Preveniți eventualele pierderi dacă este sigur să faceți asta. Nu aruncați în apele de suprafață sau în sistemele de canalizare. .

6.3 Metode și material pentru izolarea incendiilor și pentru curățenie

	Nu sunt date disponibile.
--	---------------------------

6.4 Trimiteri către alte secțiuni) (trimiteri către secțiunile 8 și 13).

	A se vedea și declarațiile de la secțiunile 8 și 13.
--	--

7. MANIPULARE ȘI DEPOZITARE

7.1. Precauții pentru manipularea în condiții de securitate

Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu ochii, pielea și îmbrăcămintea. Evitați să respirați vapori de ceață sau praf. Spălați bine mâinile după manipulare.
--	---

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	Depozitați în zone uscate și bine ventilate. Păstrați containerele închise etanș și departe de căldură și surse de aprindere.
Specificatiile zonei de depozitare:	Depozitați în zone reci, bine ventilate.
Specificatiile recipientilor:	Păstrați containere închise etanș.
Incompatibilități:	Nu sunt date disponibile.

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Agent de modificare a vâscozității pentru fluide de foraj pe bază de ulei
-----------------------------	---

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ

8.1. Parametri de control

TLV _{Ceiling} :	---
TLV _{TWA} :	---
TLV _{STEL} :	---
Limita biologică:	---

8.2. Controale ale expunerii profesionale

- AVOIL DW -

Controale tehnice corespunzătoare :		Mențineți un control adecvat al dispozitivelor de comandă sau a ventilării astfel încât componentele periculoase să fie ținute sub limitele acceptabile. Utilizați un dispozitiv de respirat atunci când limitele sunt depășite.
Protecție colectivă:		Se recomandă ventilația generală.
Protecția individuală	Respiratorie:	În caz de expunere la ceață, spray sau aerosoli, folosiți un dispozitiv de respirație corespunzător.
	Ochi	Utilizați ochelari de protecție care se fixează foarte bine pe față.
	Mâini	Mănuși de protecție
	Corp	Îmbrăcăminte de protecție standard..
8.3. Controlul expunerii mediului		
Scenarii de expunere		Nu sunt date disponibile.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Aspect:	Lichid vâscos
Starea fizică:	lichid
Culoare:	galben
Miros:	Ușor
Prag olfactiv:	Nu sunt date disponibile.
9.2. Informații pentru sănătate, siguranță și mediu	
pH	10-11
Punct de topire:	N/A
Punct de fierbere:	>175°C
Punct de aprindere:	82 °C
Inflamabilitate (solid, gaz):	Nu sunt date disponibile
Temperatura de autoaprindere:	Nu se autoaprinde
Temperatura de descompunere:	Nu sunt date disponibile.
Pericol de explozie:	Vaporii pot forma amestecuri explozive cu aerul
Limita de inflamabilitate superioară:	Nu sunt date disponibile
Limita inferioară de inflamabilitate:	Nu sunt date disponibile
Presiunea de vapori:	Nu sunt date disponibile.
Densitatea la 20 °C:	1.0-1.1 g/cm ³
Densitatea aparentă (20°C)	0.96 g/cm ³
Densitatea în vrac (Bulk)	Nu sunt date disponibile.
Densitatea relativă (20°C):	Nu sunt date disponibile
Densitatea de vapori:	Nu sunt date disponibile.
Rata de evaporare:	Nu sunt date disponibile.
Solubilitate în apă (20°C):	Insolubil
Coeficientul de distribuție (n-octanol):	Nu sunt date disponibile.
Vâscozitatea (40°C):	Nu sunt date disponibile
9.3. Alte informații	
Alte informații:	Nu sunt date disponibile.

10. STABILITATE ȘI REACTIVITATE

- AVOIL DW -

10.1. Reactivitate	
Condiții care trebuie evitate:	Căldură, flăcări și scântei.
10.2. Stabilitate chimică	
Materiale incompatibile	Agenți de oxidare puternici
Posibilitatea de reacții periculoase:	Nu sunt cunoscute reacții periculoase în condiții de utilizare normală.
10.3. Posibilitatea de reacții periculoase	
Nu sunt date disponibile.	
10.4. Condiții de evitat	
Nu sunt date disponibile.	
10.5. Materiale incompatibile	
Nu sunt date disponibile.	
10.6. Produși de descompunere periculoși	
Nu sunt date disponibile.	

11. INFORMAȚII TOXICOLOGICE	
11.1. Informații privind efectele toxicologice	
Toxicitatea substanței:	Dipropilen glicol monometil eter, CAS No. 34590-94-8
Toxicitate Acută	
Toxicitate orală acută:	LD50 (șobolan): 5230 mg/kg.
Toxicitate inhalatorie acută:	Nu sunt date disponibile.
Toxicitate cutanată acută:	LD50 (lepure): 9500 mg/kg
Toxicitatea substanței:	Dietilen triamină, CAS No. 111-40-0
Toxicitate Acută	
Toxicitate orală acută:	LD50 (șobolan): 819 mg/kg.
Toxicitate inhalatorie acută:	Nu sunt date disponibile.
Toxicitate cutanată acută:	LD50 (lepure): 672 mg/kg
11.2. Corozivitate	
Piele:	Nu sunt date disponibile
Ochi:	Nu sunt date disponibile
11.3. Irritație	
Piele:	Nu sunt date disponibile.
Ochi:	Nu sunt date disponibile.
11.4. Toxicitate la doze repetate	
Ingestie:	Nu sunt date disponibile.
Inhalare:	Nu sunt date disponibile
11.5. Sensibilitate	
Piele:	Poate cauza reacții alergice ale pielii.
Ochi:	Nu sunt date disponibile.
11.6 Cancerogenitate	
	Nu sunt date disponibile.
11.7 Mutagenitate	
	Nu sunt date disponibile.
11.8 Toxicitate pentru reproducere	
	Nu sunt date disponibile.

- AVOIL DW -

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substanță:	Dipropilen glicol monometil eter, CAS No. 34590-94-8
Toxicitate în apă:	LC50 (pește) 96h: 10 g/l EC50 (Daphnia magna) 48h: 1919 mg/l
Toxicitate în aer:	Nu sunt date disponibile.
Toxicitate în sol:	Nu sunt date disponibile.
Substanță:	Dietilen triamină, CAS No. 111-40-0
Toxicitate în apă:	LC50 (Pește) 96h: 248 mg/l EC50 (Daphnia magna) 48h: 16 mg/l
Toxicitate în aer:	Nu sunt date disponibile.
Toxicitate în sol:	Nu sunt date disponibile.
12.2. Persistență și degradabilitate	
Alte informații:	Nu sunt date disponibile
12.3. Potențial de Bioacumulare	
Alte informații:	Nu sunt date disponibile
12.4. Mobilitate în sol	
Alte informații:	Nu sunt date disponibile.
12.5. Rezultatele evaluării PBT și vPvB	
PBT:	Nu sunt date disponibile.
vPvB:	Nu sunt date disponibile.
12.6. Alte efecte adverse	
Alte informații:	Nu permiteți ca produsul să ajungă în apele freatice, cursurile de apă sau în sistemul de canalizare. Periculos pentru apa potabilă chiar dacă cantități mici s-au scurs în sol.
13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Nu contaminați iazuri, cursuri de apă sau canale cu produse chimice sau cu ambalaje. Eliminați conform reglementărilor în vigoare locale și naționale.
Cod de deșeu:	Nu sunt date disponibile.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Eliminarea trebuie făcută la punctele autorizate pentru managementul deșeurilor, conform reglementărilor în vigoare locale și naționale.
Alte recomandări:	Ambalajele golite ar trebui duse la reciclatorii locale pentru eliminare.
	Legislația privind eliminarea deșeurilor: (trece la 13) Legea 211/2011 privind regimul deșeurilor. HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României. HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor. HG 349/2005 privind depozitarea deșeurilor; OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor; HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase. HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.
	Legislația pentru deșeurile de ambalaj: Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje si deșeurile de ambalaje. HG 247/2011 pentru modificarea si completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor si a deșeurilor de ambalaje. HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje. HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

- AVOIL DW -

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Norme de transport ONU	Nu sunt date disponibile.
Clasa (clasele) de pericol pentru transport	Nu sunt date disponibile.
Grupul de ambalare:	Nu sunt date disponibile.
Pericol pentru mediu	Nu sunt date disponibile.
Precauții pentru utilizatori	
14.2. Transport Maritim (IMDG)	
Clasa IMDG:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Poluant marin:	Nu sunt date disponibile.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Clasa ICAO	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Clasa IATA	Nu sunt date disponibile.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările în transport
Codul IBC:	Nu sunt date disponibile.
15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Reglementări naționale: Legea 319/2006 – legea referitoare la sănătatea și securitatea în muncă HG 1425/2006 consolidată – Norme de aplicare ale Legii 301/2006 HG 1218/2006 privind Stabilirea cerințelor minime de securitate și sănătate în muncă pentru asigurarea protecției lucrătorilor împotriva riscurilor legate de prezența agenților chimici HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.	
15.2 Evaluarea securității chimice	Nu a fost efectuată o evaluare a securității chimice.
16. ALTE INFORMAȚII	
16.1. Principalele surse bibliografice	
ECDIN - Environmental Chemicals Data and Information Network - Rețeaua de Informații și Date despre Substanțele Chimice utilizate în Mediul Înconjurător creată de Joint Research Centre, Commission of the European Communities - Centrul European Comun de Cercetare al Comisiei Comunităților Europene	
SAX's DANGEROUS PROPERTIES OF INDUSTRIAL MATERIALS - Eight Edition – Van Nostrand Reinold	
Istituto Superiore di Sanità - Inventario Nazionale Sostanze Chimiche-/ Institutul Superior de sănătate – Inventarul Național al Substanțelor (Italia)

http://www.ilpi.com/Msds/ref/tsrn.html	
16.2. Lista frazelor de pericol și de precauție utilizate Alte informații –	
Fraze de pericol utilizate în secțiunile anterioare	
H302: Nociv în caz de înghițire	
H312: Nociv în contact cu pielea.	

- AVOIL DW -

H314: Provoacă arsuri grave ale pielii și lezarea ochilor
H315: Provoacă iritarea pielii
H317: Poate provoca o reacție alergică a pielii.
H319: Provoacă o iritare gravă a ochilor
H330: Mortal în caz de inhalare
H335: Poate provoca iritarea căilor respiratorii.
EUH208: Conține dietilentriamina. Poate provoca o reacție alergică

Fraze de precauție utilizate în secțiunile anterioare

P264 Spălați-vă bine fața, mâinile și pielea expusă după utilizare
P280: Purtați mănuși de protecție/îmbrăcăminte de protecție/echipament de protecție a ochilor/echipament de protecție a feței
P302+P352: ÎN CAZ DE CONTACT CU PIELEA: Spălați cu multă apă și săpun
P305+P351+P338: ÎN CAZ DE CONTACT CU OCHII: Clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.
P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare

16.3. Abrevieri și acronime utilizate:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase
RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate
GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice
ECHA – Agenția Europeană pentru Substanțe Chimice
EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente
CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)
CSA: Chemical Safety Assessment – Evaluarea Securității Chimice
ACGIH: American Conference of Industrial Hygienists - Conferința Americană de Sănătate Publică
EC50: median effective concentration - concentrația efectivă medie
EUH: declarație de pericol, care este convenită în afara sistemului global armonizat GHS
LC50: median lethal concentration - concentrația letală medie
LD50: median lethal dose - doză letală medie
N/A: neaplicabil
NJTSR: New Jersey Trade Secret Registry Number - Număr de înregistrare al produselor cu compoziție declarată de secretă, comercializate în statul New Jersey
NOEC: no observable effect concentration – concentrația fără efect observat
PNEC: predicted no-effect concentration - concentrația fără efect prevăzut
PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice
FSD: Fișa de Date de securitate
STOT SE: Toxicitate asupra unui organ țintă specific – o singură expunere
vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative
TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore
TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt
TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații –

16.4.1 Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.
Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.
Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul

- AVOIL DW -

trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul EU 453/2010/. Această fișă anulează și înlocuiește orice ediție precedentă. Modificările intervenite între două ediții ale unei FDS sunt ținute sub control la producător.

16.4.2 Clauze de exonerare de răspundere

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document. Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere conform celor indicate în fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță pentru utilizarea intenționată declarată. Este responsabilitatea utilizatorului să se asigure că este în posesia ultimei ediții a fișei de securitate.

16.4.3 Răspundere

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate cu excepția acelor informații din secțiunile 1, 13, 15 și 16 care au fost armonizate cu legislația română în vigoare. De asemenea, structura fișei de securitate a fost armonizată cu structura din Anexa II B a Regulamentului UE 1907/2008.

Răspunderea pentru conținutul versiunii în limba engleză al acestei FDS aparține Ava S.p.A.

Răspunderea pentru traducerea în limba română a reviziei 3 a acestei FDS și armonizarea cu cerințele legislației române la secțiunile mai sus indicate, aparține AVA EASTERN EUROPE D.F & S srl prin Compartimentul QSHE și Isabela NIȚĂ, inginer chimist.

Sfârșitul fișei de securitate

**AVA S.p.A.**Sediu legal: Via Salaria 1313/c
00138 Roma
Italia**FIȘĂ CU DATE DE SECURITATE**

În conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
<i>Indicarea de pericole specifice pentru om și mediul înconjurător:</i>		
SUBSTANȚA / AMESTECUL NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
---	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Fraze de precauție:		
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:	---	NU ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI
Sfaturi de siguranță:	S24/25: Evitați contactul cu pielea și ochii.	
Eliminarea:		
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII						
3.1. Proprietăți chimice ale substanței sau amestecului						
Compoziție:	Amestec					
Conținut:	În conformitate cu tabelul următor:					
Formula moleculară:	---					
Numărul ONU:	---					
Numărul EC:	---					
Numărul CAS:	---					
Numărul REACH:	---					
3.2. Componenti periculoși						
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Etandiol REACH No. 01-2119456816-28-XXXX	107-21-1	203-473-3	>1-<2,5%	Asp. Tox. 4	 GHS07	H302
				STOT RE 2	 GHS08	H373

**- AVOIL FC -**

Name	CAS No.	EC No.	Quantity	Classification	Symbols	Hazard Statements
Etandiol	107-21-1	203-473-3	>1-<2,5%	Xn - nociv		R22

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți imediat persoana afectată afară/la aer curat. Dacă simptomele persistă, adresați-vă unui medic.
După contactul cu pielea:	Scoateți îmbrăcămintea contaminată. Spălați zona afectată cu apă. Consultați medicul dacă există o iritație a pielii.
După contactul cu ochii:	Clătiți ochii cu apă cel puțin 15 minute. Solicitați asistență medicală dacă iritația ochilor se dezvoltă sau persistă.
După înghițire:	Nu induceți vomă fără aviz medical. Niciodată nu administrați nimic pe cale orală unei persoane în stare de inconștiență. Consultați un medic dacă este necesar.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	N.a.
----------	------

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și arătați-i aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	N.a.

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu respectați următoarele instrucțiuni:
Mijloace de stingere corespunzătoare:	ABC pulbere, CO2, produse chimice uscate, apa pulverizată.
Mijloace de stingere necorespunzătoare:	Halon
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Alcoolii, aldehide, dioxid de carbon și monoxid de carbon, eteri, hidrocarburi, oxid de potasiu
Echipamente speciale de stingere a incendiilor	În caz de incendiu, trebuie utilizat aparat de respirație autonom cu mască completă, funcționând cu presiune pozitivă și echipament de protecție corespunzător. Nu permiteți ca scurgerile de la stingerea incendiilor să pătrundă în canalizare sau în cursurile de apă

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	Evitați contactul cu ochii și pielea. Scoateți toate hainele contaminate. Atunci când se utilizează, nu se va mânca, bea sau fuma. Persoanele care nu poartă echipament de protecție trebuie să fie excluse din zona de deversare până când procesul de curățare a fost finalizat.
Proceduri de urgență:	N.a.

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	Absorbiți cu un material absorbant inert (spre exemplu nisip, silicagel, liant pentru acizi, liant universal, rumeguș)
-------------------	--

**- AVOIL FC -**

Metode de limitare a poluării	Scurgerile mari ar trebui să fie colectate mecanic (aspirare cu ajutorul pompelor) pentru a fi eliminate. Păstrați în containere adecvate, închise - pentru eliminare
Informații suplimentare:	Preveniți scăpările sau scurgerile ulterioare dacă acest lucru se poate face în condiții de siguranță. Nu deversați în sistemul de canalizare sau în mediu. Nu se va contamina pânza de apă freatică

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Nu respirați vaporii sau jetul de pulverizare
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Depozitați în containerul original. Se vor păstra containerele ermetic închise, într-un loc uscat, răcoros și bine ventilat.
Specificațiile zonei de depozitare:	Depozitați în zone uscate și bine ventilate
Specificațiile recipientelor:	A se păstra în containerul original bine închis
Incompatibilități:	Stabil în condițiile de depozitare recomandate. A se feri de îngheț
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Reducator de filtrat pentru fluide de foraj pe baza de ulei

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Parametri de control		
Limitele sunt în conformitate cu tabelele următoare.		
Substanța	Etandiol CAS No. 107-21-1	
TLV _{Ceiling} :	---	
TLV _{TWA} :	20 ppm - 52 mg/m ₃	
TLV _{STEL} :	40 ppm – 104 mg/m ₃	
Limita biologică	---	
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Furnizați mecanic ventilație suficientă (generală, de evacuare și / sau local) pentru a menține expunerea sub nivelul de supraexpunere (de efecte adverse cunoscute, suspectate sau evidente).
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Ventilație forțată, stație de spălare ochi.
Protecția individuală	Respiratorie:	În condiții normale, nu este necesar echipament de protecție respiratorie
	Ochi	Ochelari de protecție cu ecrane laterale
	Maini	Mănuși impermeabile.
	Corp	Îmbrăcăminte de protecție standard,
8.3. Controlul expunerii mediului		
Variante de expunere		Preveniți scăpările sau scurgerile ulterioare dacă acest lucru se poate face în condiții de siguranță.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid
Aspect:	Lichid
Culoare:	Negru
Miros:	Caracteristic
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	

**- AVOIL FC -**

pH	11
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	111 °C
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.

Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	N.a.
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea:	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE**10.1. Reactivitate**

Condiții care trebuie evitate:	Nu se produce o polimerizare periculoasă. Căldură excesivă, căldură, flăcări și scântei.
--------------------------------	--

10.2. Stabilitate chimică

Materiale incompatibile:	Aldehyde, metale alcaline, metale alcalino-pământoase, baze, aluminiu, acizi tari baze tari, agenți oxidanți puternici, compuși ai sulfului.
Posibilitatea de reacții periculoase:	În condiții normale de depozitare și utilizare, nu vor avea loc reacții periculoase

10.3. Produși de descompunere periculoși

Alte informații:	Aldehyde, dioxid de carbon și monoxid de carbon, hidrocarburi, acizi organici, oxizi de sulf, cetone
------------------	--

11. INFORMAȚII TOXICOLOGICE**11.1. Toxicitate Acută**

Toxicitatea substanței	<i>Etandiol CAS No. 107-21-1</i>
Toxicitate orală acută:	LD50 (Șobolan): 6.140 mg/kg Organele țintă: supraexpunerea la acest material (sau componentele acestuia), a sugerat ca fiind cauza pentru următoarele efecte adverse la indivizi umani: leziuni renale, afecțiuni hepatice
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	LD50 (iepure): 9.530 mg / kg Evaluare: Poate provoca leziuni ale organelor în caz de expunere prelungită sau repetată

11.2. Corozivitate

Piele:	N.a.
Ochi:	N.a.

**- AVOIL FC -**

11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Toxicitatea substanței	<i>Etandiol CAS No. 107-21-1</i>
Toxicitate în apă:	LC50 (Pești) 96 h: 27.540 mg/l LC50 (Dafnii) 48 h: > 10.000 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	Potențialul de bioacumulare nu poate fi determinat
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	Utilizare în conformitate cu procedurile de lucru, evitând dispersia în mediul înconjurător.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Nu deversați în sistemul de canalizare sau în mediul înconjurător, eliminați la un centru autorizat de colectare a deșeurilor. Eliminați în conformitate cu directivele europene privind deșeurile și deșeurile periculoase.
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Se va elimina în conformitate cu reglementările locale

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Denumirea oficială a transportului	N.a.
Cod de acces în galerie/tunel	N.a.

**- AVOIL FC -**

14.2. Transport Maritim (IMDG)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Număr EMS	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare	N.a.
Poluant marin:	N.a.
Denumirea oficială a transportului	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa ICAO / IATA	N.a.
Eticheta	N.a.
Grupul de ambalare	N.a.
Denumirea oficială a transportului	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr. 1907/2006 (REACH)	
Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	
Reglementări naționale:	
Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.	
Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.	
REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor	
HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;	
HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;	
REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).	
REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.	
REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).	
Regulament 552/2009 de modificare a anexei XVII din Regulamentul (CE) nr. 1907/2006 – REACH privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase	

**- AVOIL FC -**

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solvenților organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei

**- AVOIL FC -**

fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C: Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H302: Nociv în caz de înghițire.

H373: Poate provoca afectări ale organelor în caz de expunere repetată sau prelungită

R22: Nociv în caz de înghițire

Fraze de precauție utilizate în secțiunile anterioare

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S24/25: Evitați contactul cu pielea și ochii.

2. IDENTIFICAREA PERICOLELOR			
2.1. Clasificarea substanței sau a amestecului			
Indicarea de pericole specifice pentru om și mediul înconjurător:			
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI			
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)			
	GHS05	Cor. Piele 1C H314: Causes severe skin burns and eye damage	
	GHS07	Sens. cut. 1 H 317: Poate provoca o reacție alergică a pielii.	
	GHS08	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii	
	GHS09	Acvatic ac. 1 H400: Foarte toxic pentru mediul acvatic.	
		Acvatic cr. 1 H 410: Foarte toxic pentru mediul acvatic cu efecte pe termen lung.	
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.			
	C - Coroziv	R 34: Provoacă arsuri.	
	Xi	R65: Nociv: poate provoca afecțiuni pulmonare în caz de înghițire.	
		R 43: Poate provoca sensibilizare la conatct cu pielea	
	N – Periculos pentru mediul înconjurător	R 50/53: Foarte toxic pentru organismele acvatice, poate provoca efecte adverse pe termen lung asupra mediului acvatic.	
2: IDENTIFICAREA PERICOLELOR			
2.2. Elemente pentru etichetă			
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)			
Identificarea pericolelor:	   		
	GHS08	GHS05	GHS07

**- AVOIL PE-LT -**

	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii Cor. Piele 1C H314: Causes severe skin burns and eye damage Sens. cut. 1 H 317: Poate provoca o reacție alergică a pielii. Acvatic cr. 1 H 410: Foarte toxic pentru mediul acvatic cu efecte pe termen lung.	
Fraze de precauție:	P261: Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței. P310: Sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic. P301 + 310: ÎN CAZ DE ÎNGHIȚIRE: sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic. P303 + P361 + P353: ÎN CAZ DE CONTACT CU PIELEA (sau părul): scoateți imediat toată îmbrăcămintea contaminată. Clătiți pielea cu apă/faceți duș. P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare pentru substanțe/amestecuri periculoase.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		C – Coroziv R 34: Provoacă arsuri.
		Xn – Nociv R65: Nociv: poate provoca afecțiuni pulmonare în caz de înghițire.
		Xn – Nociv R 43: Poate provoca sensibilizare la conatct cu pielea
		N – Periculos pentru mediul înconjurător R 50/53: Foarte toxic pentru organismele acvatice, poate provoca efecte adverse pe termen lung asupra mediului acvatic.
Sfaturi de siguranță::	S23: A nu se inspira gazul/fumul.vaporii (termenul(ii) corespunzator(i) se specifică de către producător) S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S62: În caz de înghițire, a nu se provoca voma: a se consulta un medic și a i se arăta ambalajul (recipientul) sau eticheta. S24/25: Evitați contactul cu pielea și ochii. S37/39: Purtași mănuși corespunzătoare și mască de protecție pentru ochi/față.	
Eliminarea:	S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.	
2.3. Alte pericole

4. MĂSURI DE PRIM AJUTOR

4.1. Descrierea măsurilor de prim ajutor

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Scoateți persoana la aer curat. Consultați un medic după o expunere semnificativă. Dacă simptomele persistă se va solicita asistență medicală. În caz de dificultăți (întrerupere) de respirație, se va administra oxigen.
După contactul cu pielea:	Se vor scoate hainele și încălțăminte contaminată. Dacă simptomele persistă se va solicita asistență medicală.
După contactul cu ochii:	Țineți pleoapele deschise și ochii vor spăla cu apă din abundență, timp de cel puțin 15 minute. Solicitați asistență medicală. Scoateți lentilele de contact.
După înghițire:	NU induceți voma. Nu administrați nimic pe cale orală unei persoane în stare de inconștiență. Obțineți asistență medicală.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	Semne și simptome ale expunerii la acest material, prin respirație, înghițire, și/sau trecerea materialului prin piele pot include: tulburări digestive, de stomac sau intestinale, (greațuri, vărsături, diaree), iritație (a nasului, gâtului, cailor respiratorii), iritație pulmonară, deprimarea sistemului nervos central (amețeli, somnolență, slăbiciune, oboseală, greațuri, dureri de cap, pierderea cunoștinței). Lipsă de coordonare, confuzie, narcoză, bătăi neregulate ale inimii (senzație de amețelă sau leșin), convulsii. Inhalarea unor concentrații mari din acest material, cum ar putea
----------	--

**- AVOIL PE-LT -**

	avea loc în spații închise sau în timpul abuzului deliberat, pot fi asociate cu aritmii cardiace. Pericolul potențial de aspirație trebuie să fie pus în balanță ca o posibilă toxicitate dobândită pe calea aerului.
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și să îi arătați aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	Nu există riscuri care să necesite măsuri speciale de prim-ajutor.

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsuri de precauție în caz de incendiu:	În caz de incendiu urmați următoarele instrucțiuni
Mijloace de stingere corespunzătoare:	Pulbere ABC, dioxid de carbon (CO ₂), produse chimice uscate, apă pulverizată
Mijloace de stingere necorespunzătoare:	Halon
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Dioxid de carbon și monoxid de carbon, hidrocarburi, oxizi de azot (NO _x)
Echipamente speciale de stingere a incendiilor	În caz de incendiu, purtați un aparat de respirat. Utilizați echipament de protecție individual

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament de protecție adecvat PPE. (Echipament de protecție individual)
Proceduri de urgență:	Persoanele care nu poartă echipament de protecție trebuie să fie îndepărtate din zona de deversare până când procesul de curățare a fost finalizat. Acordați atenție la răspândirea de gaze mai ales la nivelul solului (mai greu decât aerul) și la direcția vântului.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Nu deversați în sistemul de canalizare sau în mediu. Nu contaminați sistemul de apă subteran.
Metode de limitare a poluării	Conținutul scurgerilor, se va colecta cu material absorbant necombustibil, (de exemplu, nisip, pământ, pământ kiselgur, vermiculit) și se va depozita în containere pentru eliminare în conformitate cu reglementările locale / naționale. Păstrați în containere adecvate, închise, în vederea eliminării.
Informații suplimentare:	Preveniți scăpările sau scurgerile ulterioare dacă acest lucru se poate face în condiții de siguranță.

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Nu respirați vaporii sau jetul de pulverizare. Evitați contactul cu pielea și ochii. Asigurați reîmprospătarea aerului și / sau o ventilație corespunzătoare la locul de muncă. Se va evita depășirea limitelor de expunere la locul de muncă. Fumatul, mâncatul și băutul sunt interzise în spațiul de utilizare.
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Se vor păstra containerele ermetic închise, într-un loc uscat, ventilat fără surse de aprindere.
Specificățiile zonei de depozitare:	Depozitați într-o zonă uscată, rece și bine ventilată.
Specificățiile recipientilor:	Pastrati în containerul original. Păstrați containerele ermetic închise.
Incompatibilități:	Păstrați la distanță de sursele de căldură și de aprindere.

**- AVOIL PE-LT -**

7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Emulsificator primar cu toxicitate redusă pentru fluide de foraj pe baza de ulei (OBM)

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control	
<i>Limites sunt în conformitate cu tabelele următoare.</i>	
Substanța	Propanol (Metoximetiletoxi) CAS n° 34590-94-8
TLV _{Celing} :	---
TLV _{STEL} :	---
TLV _{TWA} :	50 ppm – 308 mg/m ³
Limita biologică:	---
8.2. Controale ale expunerii profesionale	
8.2.1. Controale tehnice corespunzătoare	Se recomandă ventilație generală.
8.2.2. Măsurile de protecție individuală, precum echipamentul de protecție personală.	Ventilație forțată, stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie: Protecția respiratorie în mod normal nu este necesară. Dacă este nevoie, puteți purta un aparat de respirație corespunzător.
	Ochi Ochelari de protecție cu ecrane laterale
	Maini Purtați mănuși rezistente, cum ar fi: polivinil alcool.
	Corp Îmbrăcăminte standard de protecție și încălțăminte de protecție.
8.3. Controlul expunerii mediului	
Variante de expunere	Preveniți scăpările sau scurgerile ulterioare, dacă acest lucru se poate face în condiții de siguranță.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid
Aspect:	Lichid
Culoare:	Maro
Miros:	N.a.
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH	N.a.
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	>65 °C
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 50 °C:	N.a.
Densitatea aparentă (20°C):	0,92 g/cm ³

**- AVOIL PE-LT -**

Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Insolubil
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea (50 °C):	N.a.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Nu permiteți evaporarea până la deshidratare. Căldură, flăcări și scântei. Expunerea la aer.
10.2. Stabilitate chimică	
Materiale incompatibile:	Acizi, agenți oxidanți, săruri de baze puternice, baze puternice, agenți puternic reducători.
Posibilitatea de reacții periculoase:	În condiții normale de depozitare și utilizare, nu vor avea loc reacții periculoase
10.3. Produși de descompunere periculoși	
Alte informații:	Aldehyde, dioxid de carbon și monoxid de carbon, hidrocarburi, oxizi de azot (NOx), cetone

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Substance	<i>Distilate de petrol hidrotratate [Hydrotreated petroleum distillates]</i> CAS n° 64742-47-8
Toxicitate orală acută:	LD50 (Șobolan): >8000 mg/kg LC50 (Șobolan) 4h: >2500 ppm LD50 (Iepure): >4000 mg/kg
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
Substance	<i>Acizi grași, produse de reacție cu dietilentriamina [Fatty acids, tall-oil, reaction products with diethylenetriamine]</i> CAS n° 61790-69-0
Toxicitate orală acută:	LD50 (Șobolan): > 2000 mg/kg
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
Substance	<i>Benzenesulfonic acid, 4-C10-13-sec-alkyl derivs. CAS No. 85536-14-7</i>
Toxicitate orală acută:	LD50 (Șobolan): > 1470 mg/kg
Toxicitate inhalatorie acută:	Coroziv prin inhalare
Toxicitate cutanată acută:	N.a.
Substance	<i>(Methoxymethylethoxy)propanol CAS No. 34590-94-8</i>
Toxicitate orală acută:	LD50 (Șobolan): > 5000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Șobolan) 8h: >553ppm
Toxicitate cutanată acută:	LD50 (Șobolan): > 5000 mg/kg
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.

**- AVOIL PE-LT -**

Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	Substanța sau amestecul este cunoscut pentru riscul de a determina pericole de toxicitate prin aspirare
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substance	Acizi grași, produse de reacție cu dietilentriamina [Fatty acids, tall-oil, reaction products with diethylenetriamine]
Toxicitate în apă:	LC50 (Pești) 96h: 0,19 mg/l EC50 (Dafnii) 48h: 0,18 mg/l EC50 (Alge) 72h: 0,477 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
Substance	Polyoxyethylene trimethyldecyl alcohol CAS No. 69011-36-5
Toxicitate în apă:	LC50 (Pești) 96h: 1-10 mg/l EC50 (Dafnii) 48h: 1-10 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
Substance	(Methoxymethylethoxy)propanol CAS No. 34590-94-8
Toxicitate în apă:	LC50 (Pești) 96h: > 10000 mg/l EC50 (Dafnii) 48h: 1919 mg/l EC50 (Alge) 72h: > 969 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	Nu se așteaptă să se producă bioacumulare (log Pow <= 3)
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	A se utiliza în conformitate cu bunele practici de lucru, evitând dispersia în mediul înconjurător. Foarte toxic pentru mediul acvatic cu efecte de lungă durată

**- AVOIL PE-LT -**

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	A se elimina în conformitate cu directivele europene privind deșeurile și substanțele chimice periculoase
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Nu contaminați apele și canalele de scurgere cu substanțele chimice sau utilizate. Recipientele sunt periculoase atunci când sunt goale. Se vor elimina în conformitate cu reglementările locale. Goliți conținutul rămas. Îndepărtați produsul neutilizat. Containerele goale trebuie să fie colectate la un centru autorizat pentru reciclare sau eliminare. A nu se refolosi containerele goale. A nu se arde sau a nu se utiliza o flacăra de tăiere, recipientul gol este periculos chiar și gol. Se vor elimina în conformitate cu reglementările locale.
Alte recomandări:	Goliți conținutul rămas. Eliminați produsul neutilizat

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	UN1760
Norme de transport ONU	LICHID COROZIV, N.O.S.
Clasa (clasele) de pericol pentru transport	8
Grupul de ambalare:	III
Denumirea oficială a transportului	Periculos pentru mediu
Cod de restricție în tunel:	- - -
14.2. Transport Maritim (IMDG)	
Număr ONU	UN1760
Număr EMS	LICHID COROZIV, N.O.S.
Cod de acces în tunel	- - -
Grupul de ambalare	III
Poluant marin:	POLUANT MARIN
Denumirea oficială a transportului	Periculos pentru mediu
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Număr ONU	UN1760
Clasa ICAO / IATA	8
Eticheta	-----
Grupul de ambalare	III
Denumirea oficială a transportului	Periculos pentru mediu
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	-----
Codul IBC:	-----
Alte informații:	-----

**15. INFORMAȚII DE REGLEMENTARE****15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivei 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr. 756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

**- AVOIL PE-LT -****Legislația pentru deșeuri de ambalaj:**

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeuri de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

**- AVOIL PE-LT -**

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică
EC50: median effective concentration - concentrația efectivă medie
LC50: median lethal concentration - concentrația letală medie
LD50: median lethal dose - doză letală medie
NOEC: no observable effect concentration – concentrația fără efect observat
PNEC: predicted no-effect concentration - concentrația fără efect prevăzut
PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice
vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative
TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore
TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt
TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H302: Nociv în caz de înghițire
H304: Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii
H314: Provoacă arsuri grave ale pielii și lezarea ochilor.
H317: Provoacă iritarea pielii
H318: Provoacă leziuni oculare grave.
H400: Foarte toxic pentru mediul acvatic.
H 410: Foarte toxic pentru mediul acvatic cu efecte pe termen lung.

R22: Nociv în caz de înghițire
R34: Provoacă arsuri
R41: Risc de leziuni oculare grave.
R 43: Poate provoca sensibilizare în contact cu pielea
R65: Nociv: poate provoca afecțiuni pulmonare în caz de înghițire.
R50 / 53: Foarte toxic pentru organismele acvatice, poate provoca efecte adverse pe termen lung în mediu acvatic

Fraze de precauție utilizate în secțiunile anterioare

P 261: Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul.
P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței.
P 310: Sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic.
P301 + 310: ÎN CAZ DE ÎNGHIȚIRE: sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic.
P 303 + P361 + P353: ÎN CAZ DE CONTACT CU PIELEA (sau părul): scoateți imediat toată îmbrăcăminte contaminată. Clătiți pielea cu apă/faceți duș.
P305 + P351 + P338: ÎN CAZ DE CONTACT CU OCHII: clătiți cu atenție cu apă, timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clătiți.
P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare pentru substanțe/amestecuri periculoase.

S23: A nu se inspira gazul/fumul.vaporii (termenul(ii) corespunzător(i) se specifică de către producător)
S 26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.
S62: În caz de înghițire, a nu se provoca vomă: a se consulta un medic și a i se arăta ambalajul (recipientul) sau eticheta.
S24/25: Evitați contactul cu pielea și ochii.
S37/39: Purtați mănuși corespunzătoare și mască de protecție pentru ochi/față.
S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Mutați persoana expusă la aer curat. Solicitați asistență medicală. În caz de întrerupere a respirației, administrați oxigen.
După contactul cu pielea:	Scoateți hainele și încălțămintea contaminate. Spălați zona afectată cu multă apă. Spălați hainele contaminate înainte de re-utilizare. Dacă persistă iritarea pielii, solicitați asistență medicală.

**- AVOIL SE/LT -**

După contactul cu ochii:	Clătiți ochii cu apă cel puțin 15 minute. Solicitați asistență medicală dacă iritația ochilor progresează sau persistă. Scoateți lentilele de contact.
După înghițire:	Nu provocați vărsături fără aviz medical. Niciodată nu se va administra nimic la o persoană în stare de inconștiență. Adresați-vă unui medic dacă este necesar.
Alte informații:	N.a.
4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.	
Simptome	Inhalarea de concentrații mari din acest amestec, care poate avea loc în spații închise sau în timpul abuzul deliberat, pot fi asociate cu aritmii cardiace. Medicamente simpatomimetice pot iniția aritmii cardiace la persoanele expuse la acest amestec. Acest amestec este periculos prin aspirare. Pericolul potențial de aspirație trebuie evaluat în comparație cu posibila toxicitate orală
4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.	
Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și să îi arătați aceasta Fișă cu Date de Securitate.
Mijloace speciale de intervenție:	---

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	În caz de incendiu respect următoarele instrucțiuni:
Mijloace de stingere corespunzătoare:	În caz de incendiu, utilizați pulbere ABC, dioxid de carbon (CO ₂), produs chimic uscat, apă pulverizată.
Mijloace de stingere necorespunzătoare:	Halon
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Amine, dioxid de carbon și monoxid de carbon, hidrocarburi, oxizi de azot (NO _x), oxizi de fosfor, oxizi de sulf
Echipamente speciale de stingere a incendiilor	În caz de incendiu purtați aparat de respirație autonom cu mască completă pe față, funcționând cu presiune pozitivă și echipament de protecție.
Alte informații:	Păstrați containerele și zona înconjurătoare răcite cu jet de apă. Preveniți ca apa de stingere a incendiilor să nu contamineze apa de suprafață sau pânza de apă freatică. Reziduurile de ardere și apa contaminată folosită la stingere, trebuie eliminate în conformitate cu reglementările locale

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezonul). Persoanele care nu poartă echipament de protecție trebuie să fie scoase din zona de deversare până când procesul de curățare a fost finalizat.
Proceduri de urgență:	Evitați contactul cu ochii și pielea. Scoateți toate hainele contaminate

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	Conținutul scurgerilor, se va colecta cu material absorbant necombustibil, (de exemplu, nisip, pământ, pământ, diatomit, vermiculit)
Metode de limitare a poluarii	Păstrați în containere adecvate, închise.
Informații suplimentare:	Preveniți scăpările sau scurgerile ulterioare dacă acest lucru se poate face în condiții de siguranță.

**- AVOIL SE/LT -**

7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Nu respirați vaporii sau jetul de pulverizare. Nu beți, mânâncăți sau fumați în zona de utilizare a amestecului. Containerelor care sunt deschise trebuie închise cu grijă și ținute în poziție verticală pentru a preveni scurgerile.
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	Păstrați containerele la distanță de sursele de căldură și de aprindere.
Specificățiile zonei de depozitare:	Depozitați într-o zonă uscată și bine ventilată.
Specificățiile recipientilor:	Depozitați în containerul original. Păstrați recipientul închis ermetic
Incompatibilități:	Stabil în condițiile de depozitare recomandate
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Emulgator secundar cu toxicitate redusă pentru fluide de foraj pe bază de ulei (OBM)

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ		
8.1. Limite de expunere		
Substanța		Hydrotreated petroleum distillates CAS No. 85117-49-3
TLV _{Ceiling} :		- - -
TLV _{Ceiling} :		200 mg/m3
TLV _{STEL} :		- - -
Limita biologică:		- - -
Substanța		(methyl-2-methoxyethoxy) propanol CAS No. 34590-94-8
TLV _{Ceiling} :		- - -
TLV _{Ceiling} :		50 ppm 308 mg/m3
TLV _{STEL} :		- - -
Limita biologică:		- - -
8.2. Controale ale expunerii profesionale		
8.2.1. Controale tehnice corespunzătoare		Asigurați ventilație adecvată
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.		Ventilația generală este recomandată
Protecția individuală	Respiratorie:	Protecția respiratorie nu este necesară în mod normal. Evitați generarea de aerosoli și de vapori.
	Ochi	Ochelari de protecție cu ecrane laterale
	Maini	Mănuși impermeabile (Nitril cauciuc)
	Corp	Echipament de protecție complete și încălțăminte de protecție.
8.3. Controlul expunerii mediului		
Variante de expunere		Preveniți scăpările sau scurgerile ulterioare, dacă acest lucru se poate face în condiții de siguranță.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid
Aspect:	Vâscos
Culoare:	Ambră închisă la culoare.
Miros:	Caracteristic
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	

**- AVOIL SE/LT -**

pH :	N.a.
Punct de topire:	N.a.
Punct de fierbere:	>150°C
Punct de aprindere:	>65 °C
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	N.a.
Temperatura de descompunere:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substanța	<i>Acizi grași, ulei de produse de reacție cu dietilentriamina, anhidridă maleică, tetraetilenpentamină și trietilentetramină CAS No. 68990-47-6</i>
Toxicitate în apă:	LC50 (Pești) 96h: >100 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
Substanța	<i>(methyl-2-methoxyethoxy) propanol CAS No. 34590-94-8</i>
Toxicitate în apă:	LC50 (Pești) 96h: >10000 mg/l LC50 (Dafnii) 48h: 1919 mg/l CE50 (Alge) 72h: >969 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	N.a.
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.
12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Eliminați în conformitate cu directivele europene privind deșeurile și substanțele chimice periculoase. Nu contaminați apele și canalele de scurgere cu produsul chimic sau recipientul folosit. Containerele sunt periculoase atunci când sunt goale. Eliminați în conformitate cu reglementările locale
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	Goliți conținutul rămas. Îndepărtați produsul nefolosit Containerele goale trebuie să fie colectate la un centru autorizat pentru reciclare sau eliminare. A nu se refolosi containerele goale. A nu se arde sau a nu se utiliza o flacăra de tăiere.
Alte recomandări:	N.a.

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Denumirea oficială a transportului	N.a.
Cod de acces în tunel	N.a.
14.2. Transport Maritim (IMDG)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Număr EMS	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare	N.a.
Poluant marin:	N.a.
Denumirea oficială a transportului	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa ICAO / IATA	N.a.
Eticheta	N.a.
Grupul de ambalare	N.a.
Denumirea oficială a transportului	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

15. INFORMAȚII DE REGLEMENTARE	
15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.	
Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei	
Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.	
Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)	
Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)	
Regulament (CE) nr.1907/2006 (REACH)	
Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.	
Reglementări naționale:	
Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.	
Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.	
REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr.	

**- AVOIL SE/LT -**

1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor
HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;
HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;
REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr.1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase
HG 735/2006 privind limitarea emisiei de compuși organici volatili.
HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solvenților organici în anumite activități și instalații.
Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;
Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;
HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.
HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1.488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.
O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1.272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:
Legea 211/2011 privind regimul deșeurilor.
HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.
HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.
HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.
HG 349/2005 privind depozitarea deșeurilor;
OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;
HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.
HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

Legislația pentru deșeurile de ambalaj:
Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeurile de ambalaje.
HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.
HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.
HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.
Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie

**- AVOIL SE/LT -**

informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

EC50: median effective concentration - concentrația efectivă medie

LC50: median lethal concentration - concentrația letală medie

LD50: median lethal dose - doză letală medie

NOEC: no observable effect concentration – concentrația fără efect observat

PNEC: predicted no-effect concentration - concentrația fără efect prevăzut

PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice

vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative

TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore

TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt

TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H304 – Poate fi mortal în caz de înghițire și pătrundere în căile respiratorii

H317 – Poate provoca o reacție alergică a pielii

R43 – Poate provoca sensibilizare în contact cu pielea

**- AVOIL SE/LT -**

R65 - Nociv: poate provoca afecțiuni pulmonare în caz de înghițire.
Fraze de precauție/siguranță utilizate în secțiunile anterioare
P261: Evitați să inspirați praful/fumul/gazul/ceața/vaporii/spray-ul. P280: Purtați mănuși de protecție/îmbrăcăminte de protecție/echipament de protecție a ochilor/echipament de protecție a feței P331: NU provocați vomă. P363: Spălați îmbrăcăminte contaminată înainte de reutilizare. P301 + 310: ÎN CAZ DE ÎNGHIȚIRE: sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic. P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare pentru substanțe/amestecuri periculoase.
S25: Evitați contactul cu pielea S28: După contactul cu pielea, spălați imediat din abundență cu apă. S37/39: Purtați mănuși corespunzătoare și mască de protecție pentru ochi / față S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		
Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
	GHS08	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
	Xn - nociv	R65 – Nociv: poate provoca afecțiuni pulmonare în caz de înghițire.
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	 GHS08	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii
Fraze de precauție:	P331: NU provocați voma. P301 + 310: ÎN CAZ DE ÎNGHIȚIRE: sunați imediat la un CENTRU DE INFORMARE TOXICOLOGICĂ sau un medic. P405: A se depozita sub cheie	
Eliminarea:	P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.	
Etichetarea conform Directivei 67/548/CEE (DPP)), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		Xn - nociv R65 – Nociv: poate provoca afecțiuni pulmonare în caz de înghițire
Sfaturi de siguranță::	S23: A nu se inspira vaporii și spray-ul. S 26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul. S62: În caz de înghițire, a nu se provoca voma: a se consulta imediat un medic și a-i arăta ambalajul (recipientul) sau eticheta. S24/25: Evitați contactul cu pielea și ochii. S36/37/39: Purtați echipament de protecție corespunzător, mănuși și mască de protecție pentru ochi / față	
Eliminarea:	S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.	
2.3. Alte pericole		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII	
3.1. Proprietăți chimice ale substanței sau amestecului	
Compoziție:	Amestec
Conținut:	În conformitate cu tabelul următor:
Formula moleculară:	---
Numărul ONU:	---
Numărul EC:	---
Numărul CAS:	---
Numărul REACH:	---

**3.2. Componenti periculoși**

Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Kerosine (petroleum)	8008-20-6	232-366-4	≥50-<60%	Flam. Liq. 3	 GHS02	H226
				Tox. Asp.1	 GHS08	H304
Hydrotreated petroleum distillates REACH No. 01-2119942421-46-XXXX	64742-47-8	265-149-8	≥25-<40%	Tox. Asp. 1	 GHS08	H304
(2-Methoxymethylethoxy) propanol Reach No. 01-2119450011-60-XXXX	34590-94-8	252-104-2	≥2,5-<5%	---	---	---
Nume	Nr. CAS	Nr. EC	Cantitate	Clasificare	Simbol	Fraze de pericol
Kerosine (petroleum)	8008-20-6	232-366-4	≥50-<60%	Xn - nociv		R65
Hydrotreated petroleum distillates	64742-47-8	265-149-8	≥25-<40%	Xn - nociv		R65
(2-Methoxymethylethoxy) propanol	34590-94-8	252-104-2	≥2,5-<5%	---	---	---

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Mutați persoana expusă la aer curat. Adresați-vă unui medic după expunere semnificativă. Dacă simptomele persista, solicitați ajutor medical.
După contactul cu pielea:	Scoateti imbracamintea contaminata si incaltamintea imediat. Spalati imediat cu apa din abundenta.
După contactul cu ochii:	Spălați imediat ochii, cu apă din abundență timp de cel puțin 15 minute. Solicitați imediat asistență medicală dacă iritarea ochiului persista
După înghițire:	NU induceți vomă. Nu administrați niciodată nimic pe cale orală unei persoane în stare de inconștiență. Solicitați imediat asistență medicală.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	---
----------	-----

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și să îi arătați aceasta Fișă cu Date de Securitate.
------------------------	--

AVOIL TN/LT

5. MĂSURI DE COMBATERE A INCENDIILOR	
5.1. Mijloace de stingere a incendiilor	
Măsurile de precauție în caz de incendiu:	În caz de incendiu sau dacă este încălzit, presiunea va crește și recipientul poate exploda.
Mijloace de stingere corespunzătoare:	Utilizați un agent adecvat pentru stingerea incendiilor: pulbere ABC, dioxid de carbon (CO ₂), chemical chemical, pulbere de apă.
Mijloace de stingere necorespunzătoare:	Haloni
Riscuri care derivă din ardere (produse de descompunere termică periculoși):	Produse de descompunere pot include următoarele materiale: Aldehide, dioxid de carbon și monoxid de carbon, hidrocarburi, oxizi de azot (NO _x), oxizi de sulf.
Echipamente speciale de stingere a incendiilor	Purtați aparat de respirat autonom.
6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ	
6.1. Precauții personale, echipament de protecție și proceduri de urgență	
Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezon).
Proceduri de urgență:	N.a.
6.2. Precauții pentru mediul înconjurător	
Medii de izolare:	Colectați cu material non-combustibil absorbant (de exemplu, nisip, pământ, diatomit, vermiculit)
Metode de limitare a poluării	Păstrați în recipiente adecvate, închise pentru eliminarea reziduurilor
Informații suplimentare:	N.a.
7. MANIPULARE ȘI DEPOZITARE	
7.1. Precauții pentru manipularea în condiții de securitate	
Precauții pentru manipulare în condiții de securitate:	Nu se inspirați vaporii sau jetul de pulverizare. Asigurați o reîmprospătare a aerului și / sau evacuare de la locul de muncă
7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități	
Condiții de depozitare:	A se depozita în locuri răcoroase și bine ventilate, la distanță de surse de aprindere.
Specificațiile zonei de depozitare:	A se păstra într-un loc uscat, răcoros și bine ventilat
Specificațiile recipientilor:	A se păstra în recipientul original. Se vor păstra containerele ermetic închise
Incompatibilități:	Păstrați la distanță de căldură și de sursele de aprindere
7.3. Utilizare finală specifică:	
Utilizări finale specifice:	Agent de reducere a vascotății pentru fluide de foraj pe baza de ulei (OBM)
8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ	
8.1. Parametri de control – Limitele de expunere	
Substanță	(2-Methoxymethylethoxy) propanol CAS No. 34590-94-8
TLV _{Ceiling} :	- - -
TLV _{TWA} :	308 mg/m ³ – 50 ppm
TLV _{STEL} :	- - -
Limita biologică:	- - -
8.2. Controale ale expunerii profesionale	
8.2.1. Controale tehnice corespunzătoare	Ventilația generală este recomandată
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.	Ventilație forțată, stație de spălare ochi.
Protecția	Respiratorie: Echipament adecvat de protecție respiratorie

AVOIL TN/LT

individuală	Ochi	Ochelari de protecție cu ecrane laterale
	Maini	Mănuși de protecție rezistente
	Corp	Imbracaminte de protecție completă a corpului.

8.3. Controlul expunerii mediului

Variante de expunere	Preveniti scăpările sau scurgerile ulterioare dacă este sigur să se facă acest lucru
----------------------	--

9. PROPRIETĂȚI FIZICE ȘI CHIMICE**9.1. Informații generale**

Stare:	Lichid
Aspect:	Lichid
Culoare:	Ambră
Miros:	Hidrocarburi
Prag olfactiv:	N.a.

9.2. Informații pentru sănătate, siguranță și mediu

pH	N.a.
Punct de topire:	N.a.
Punct de fierbere:	>200°C
Punct de aprindere:	69 °C
Inflamabilitate (solid, gaz):	N.a.
Temperatura de autoaprindere:	>200°C
Temperatura de descompunere:	N.a.
Pericol de explozie:	N.a.
Limita de inflamabilitate superioară:	N.a.
Limita inferioară de inflamabilitate:	N.a.
Presiunea de vapori:	N.a.
Densitatea la 20 °C:	1 g/cm ³
Densitatea aparentă	N.a.
Densitatea relativă:	N.a.
Densitatea de vapori:	N.a.
Rata de evaporare:	N.a.
Solubilitate în apă (20°C):	Insolubil
Coeficientul de distribuție (n-octanol):	N.a.
Vâscozitatea (40 °C):	N.a.

9.3. Alte informații

Alte informații:	N.a.
------------------	------

10. STABILITATE ȘI REACTIVITATE**10.1. Reactivitate**

Condiții care trebuie evitate:	Căldură excesivă, nu permit evaporarea la sec. Căldură, flăcări și scântei. Expunerea la aer
--------------------------------	--

10.2. Stabilitate chimică

Materiale incompatibile:	Acizi, aluminiu, oxigen, săruri ale bazelor puternice, baze tari, agenți de oxidare tari, agenți puternici de reducere
Posibilitatea de reacții periculoase:	În condiții normale de depozitare și utilizare, nu au loc reacții periculoase.

10.3. Produși de descompunere periculoși

Alte informații:	Aldehide, dioxid de carbon și monoxid de carbon, hidrocarburi, oxizi de azot (NO _x), oxizi de sulf, cetone
------------------	--

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxitatea substanței	<i>Kerosine (petroleum) CAS No. 8008-20-6</i>
Toxicitate orală acută:	LD50 (Sobolan): >5000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Sobolan) 4h: >5000 mg/kg
Toxicitate cutanată acută:	LD50 (Iepure): >2 g/kg
Toxitatea substanței	<i>Hydrotreated petroleum distillates CAS No. 64742-47-8</i>
Toxicitate orală acută:	LD50 (Sobolan): >8000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Sobolan) 4h: >2500 ppm
Toxicitate cutanată acută:	LD50 (Iepure): >4000 mg/kg
Toxitatea substanței	<i>(2-Methoxymethylethoxy)propanol CAS No. 34590-94-8</i>
Toxicitate orală acută:	LD50 (Sobolan): >5000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Sobolan) 4h: >553 ppm
Toxicitate cutanată acută:	LD50 (Iepure): >5000 mg/kg
Toxitatea amestecului	
Toxicitate orală acută:	N.a.
Toxicitate inhalatorie acută:	N.a.
Toxicitate cutanată acută:	N.a.
11.2. Corozivitate	
Piele:	N.a.
Ochi:	N.a.
11.3. Iritabilitate primară	
Piele:	N.a.
Ochi:	N.a.
11.4. Nocivitate	
Ingestie:	N.a.
Inhalare:	N.a.
11.5. Sensibilitate	
Piele:	N.a.
Ochi:	N.a.

12. INFORMAȚII ECOLOGICE	
12.1. Toxicitate	
Substanța	<i>(2-Methoxymethylethoxy)propanol CAS No. 34590-94-8</i>
Toxicitate în apă:	LC50 (Pesti) 96h: >10000 mg/l LC50 (Daphnia magna) 48h: 1.919 mg/l EC50 (Alge) 72h: >969 mg/l
Toxicitate în aer:	N.a.
Toxicitate în sol:	N.a.
12.2. Persistență și degradabilitate	
Alte informații:	75%
12.3. Potențial de Bioacumulare	
Alte informații:	N.a.
12.4. Mobilitate în sol	
Alte informații:	N.a.

AVOIL TN/LT

12.5. Resultatele evaluării PBT și vPvB	
PBT:	N.a.
vPvB:	N.a.
12.6. Alte efecte adverse	
Alte informații:	N.a.

13. CONSIDERAȚII PRIVIND ELIMINAREA	
13.1. Metode de eliminare a produsului	
Sfaturi:	Eliminati în conformitate cu directivele europene privind reziduurile și deșeurile periculoase. Nu contaminați apele și canalele de scurgere cu substanța chimică sau recipientul folosit. Containerul este periculos când este gol. Eliminați în conformitate cu reglementările locale
Cod de deșeu:	N.a.
13.2. Metode de eliminare a ambalajului	
Sfaturi:	N.a.
Alte recomandări:	Containerele goale ar trebui colectate la un centru certificat pentru manipularea deșeurilor pentru reciclare sau eliminare. A nu se refolosi containerele goale

14. INFORMAȚII REFERITOARE LA TRANSPORT	
14.1. Transport rutier / feroviar (ADR / RID)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Norme de transport ONU	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Denumirea oficială a transportului	N.a.
Cod de restricție a accesului în tunel	N.a.
14.2. Transport Maritim (IMDG)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Număr EMS	N.a.
Clasa (clasele) de pericol pentru transport	N.a.
Grupul de ambalare:	N.a.
Poluant marin:	N.a.
Denumirea oficială a transportului	N.a.
14.3. Transport Aerian (ICAO-TI și IATA-DGR)	
Număr ONU	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Clasa ICAO/IATA	N.a.
Etichetă	N.a.
Grupul de ambalare:	N.a.
Denumirea oficială a transportului	N.a.
14.4. Transport în vrac	
Anexa II a MARPOL73/78:	Nu sunt mărfuri periculoase în conformitate cu reglementările aplicate în transport
Codul IBC:	N.a.

**15. INFORMAȚII DE REGLEMENTARE****15.1. Regulamente / legislație în domeniul securității, sănătății și al mediului specifice (specifică) pentru substanța sau amestecul în cauză.**

Regulamentul (CE) nr. 1907/2006 (REACH) - privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a Directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei

Regulamentul (CE) nr. 1272/2008 (CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 790/2009 (adaptarea la progresul tehnic și științific al Regulamentului CLP) - privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Regulamentul (CE) nr. 453/2010 (Amendamentul Regulamentului REACH) - modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH)

Regulament FDS: Această Fișă cu Date de Securitate este elaborată în conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

Regulament (CE) nr. 1907/2006 (REACH)

Restricții la introducerea pe piață și utilizare, Regulament 552/2009: Nu conține substanțe restricționate.

Reglementări naționale:

Legea 249/2011 pentru modificarea art. 4 din Legea nr. 349/2007 privind reorganizarea cadrului instituțional în domeniul managementului substanțelor chimice.

Legea 254/2011 pentru modificarea art. 26 din Legea nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase.

REGULAMENTUL (UE) NR. 286/2011 AL COMISIEI de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor

HG 1408/2008 privind clasificarea, ambalarea și etichetarea substanțelor periculoase;

HG 937/2010 privind clasificarea, ambalarea și etichetarea la introducerea pe piață a preparatelor periculoase;

REGULAMENTUL (CE) NR. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006.

Rectificare la Regulamentul (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a Directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1907/2006 (Jurnalul Oficial al Uniunii Europene L 353 din 31 decembrie 2008).

REGULAMENTUL (CE) NR. 790/2009 de modificare, în vederea adaptării la progresul tehnic și științific, a Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

REGULAMENTUL (UE) NR. 453/2010 AL COMISIEI din 20 mai 2010 de modificare a Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH).

Regulament 552/2009 de modificare a anexei XVII din **Regulamentul (CE) nr. 1907/2006 – REACH** privind „Restricțiile privind producerea, introducerea pe piață și utilizarea anumitor substanțe, amestecuri și articole periculoase

HG 735/2006 privind limitarea emisiei de compuși organici volatili.

HG 371/2010 pentru modificarea și completarea Hotărârii Guvernului nr. 699/2003 privind stabilirea unor măsuri pentru reducerea emisiilor de compuși organici volatili datorate utilizării solventilor organici în anumite activități și instalații.

Legea 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

Legea 263/2005 pentru modificarea și completarea Legii nr. 360/2003 privind regimul substanțelor și preparatelor chimice periculoase;

HG 1093/2006 privind stabilirea cerințelor minime de securitate și sănătate pentru protecția lucrătorilor împotriva riscurilor legate de expunerea la agenți cancerigeni sau mutageni la locul de muncă.

REGULAMENTUL (CE) NR. 1336/2008 de modificare a Regulamentului (CE) nr. 648/2004 în vederea adaptării acestuia la Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor.

HG 477/2009 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1907/2006 al Parlamentului European și al Consiliului privind înregistrarea, evaluarea, autorizarea și restricționarea substanțelor chimice (REACH), de înființare a Agenției Europene pentru Produse Chimice, de modificare a Directivei 1999/45/CE și de abrogare a Regulamentului (CEE) nr. 793/93 al Consiliului și a Regulamentului (CE) nr. 1488/94 al Comisiei, precum și a Directivei 76/769/CEE a Consiliului și a directivelor 91/155/CEE, 93/67/CEE, 93/105/CE și 2000/21/CE ale Comisiei.

HG 398 /2010 privind stabilirea unor măsuri pentru aplicarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1.999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

O.U.G. 122/2010 privind stabilirea sancțiunilor aplicabile pentru încălcarea prevederilor Regulamentului (CE) nr. 1272/2008 al Parlamentului European și al Consiliului din 16 decembrie 2008 privind clasificarea, etichetarea și ambalarea substanțelor și a amestecurilor, de modificare și de abrogare a directivelor 67/548/CEE și 1999/45/CE, precum și de modificare a Regulamentului (CE) nr. 1.907/2006.

Legislația privind eliminarea deșeurilor:

Legea 211/2011 privind regimul deșeurilor.

HG 427/2010 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 1061/2008 privind transportul deșeurilor periculoase și nepericuloase pe teritoriul României.

HG 268/2005 pentru modificarea și completarea HG nr. 128/2002 privind incinerarea deșeurilor.

HG 349/2005 privind depozitarea deșeurilor;

OMAPM nr.756/2004 pentru aprobarea Normativului tehnic privind incinerarea deșeurilor;

HG 856/ 2002 privind evidența gestiunii deșeurilor și pentru aprobarea listei cuprinzând deșeurile, inclusiv deșeurile periculoase.

HG 128/2002 privind incinerarea deșeurilor, modificată și completată prin HG 268/2005.

AVOIL TN/LT

Legislația pentru deșeuri de ambalaj:

Ordinul 794/2012 privind procedura de raportare a datelor referitoare la ambalaje și deșeuri de ambalaje.

HG 247/2011 pentru modificarea și completarea Hotărârii Guvernului nr. 621/2005 privind gestionarea ambalajelor și a deșeurilor de ambalaje.

HG 1872/2006 pentru modificarea și completarea HG 621 /2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

HG 621/2005 privind gestionarea ambalajelor și deșeurilor de ambalaje.

Cod deșeu ambalaj: 15 01 10* ambalaje care conțin reziduuri sau sunt contaminate cu substanțe periculoase.

16.2. Declarații

Această fișă completează buletinul tehnic, fără să-l înlocuiască. Informațiile furnizate în această fișă tehnică cu date de securitate sunt corecte, conform cunoștințelor noastre, informațiilor și datelor noastre la data publicării sale.

Informațiile se referă numai la produsul specificat și nu pot fi valabile pentru un altfel de produs/material care este folosit în combinație cu orice alte produse/ materiale sau în orice proces, dacă nu se specifică acest lucru în text.

Această fișă tehnică cu date de siguranță conține doar informații referitoare la sănătate și siguranță. Produsul trebuie să fie utilizat în conformitate cu tehnologia AVA. Persoanele care manipulează acest produs trebuie să fie informate cu privire la măsurile de siguranță și trebuie să aibă acces la această informație.

Această fișă cu date de securitate a fost actualizată complet în conformitate cu Regulamentul 453/2010/EU.

Această fișă anulează și înlocuiește orice ediție precedentă.

Alte informații

Informațiile conținute în această Fișă cu Date de Securitate se bazează pe datele acumulate în timp și disponibile în momentul elaborării și sunt specifice acestui document.

Scopul acestei fișe este de descriere a produsului din punct de vedere al siguranței în utilizare, procesare, depozitare, transport, eliminare și nu constituie o garanție privind proprietățile specifice ale produsului.

Este întotdeauna responsabilitatea utilizatorului să ia toate măsurile de prevedere pentru fiecare secțiune a prezentei fișe astfel ca produsul să fie utilizat în siguranță.

În cazul în care sunt neclarități, se vor lua ca și informații principale de referință, informațiile conținute în varianta în limba engleză a prezentei Fișe cu Date de Securitate.

16.3. Abrevieri și acronime:

ADR: Accord européen sur le transport des marchandises dangereuses par Route (European Agreement concerning the International Carriage of Dangerous Goods by Road) - Acordul european privind transportul rutier internațional al mărfurilor periculoase

RID: Règlement international concernant le transport des marchandises dangereuses par chemin de fer (Regulations Concerning the International Transport of Dangerous Goods by Rail) - Regulamentul privind transportul internațional de mărfuri periculoase pe căile ferate

GHS: Globally Harmonized System of Classification and Labelling of Chemicals - Sistemul global armonizat de clasificare și etichetare a produselor chimice

EINECS: European Inventory of Existing Commercial Chemical Substances – Baza de date Europeană a substanțelor chimice existente

CAS: Chemical Abstracts Service (division of the American Chemical Society) – Baza de date pentru substanțe chimice (divizie a Societății Americane de Chimicale)

CSA: Chemical Safety Assessment – Evaluarea Securității Chimice

ACGIH: American Conference of Industrial Hygienists - Conferința americană de Sănătate Publică

AVOIL TN/LT

EC50: median effective concentration - concentrația efectivă medie
LC50: median lethal concentration - concentrația letală medie
LD50: median lethal dose - doză letală medie
NOEC: no observable effect concentration – concentrația fără efect observat
PNEC: predicted no-effect concentration - concentrația fără efect prevăzut
PBT: persistent, bioaccumulative, toxic chemicals - substanțe chimice persistente, bioacumulative, toxice
vPvB: very persistent, very bioaccumulative chemicals - produse chimice foarte persistente, foarte bioacumulative
TLV-TWA: Threshold limit value – Time weighted average; professional exposure limit average on 8 hours - Valoarea prag limită - Timpul mediu ponderat; limita medie de expunere profesională în 8 ore
TLV-STEL: Threshold limit value – Short Term exposure limit ; professional exposure limit at short term - Valoarea prag limită - Limita de expunere pe termen scurt; limita de expunere profesională pe termen scurt
TLV-C : Threshold limit value – Ceiling - Valoarea prag limită – maximă

16.4. Alte informații**Fraze de pericol utilizate în secțiunile anterioare**

H226: - Lichid și vapori inflamabili.

H304 – Poate fi mortal în caz de înghițire și pătrundere în căile respiratorii

R65 – Poate provoca afectare pulmonară în caz de înghițire

Text complet - Fraze de precauție/siguranță utilizate în secțiunile anterioare

P331: NU provocați vomă.

P301+P310: IF SWALLOWED: immediately call a POISON CENTER or doctor/physician.

P405: A se depozita sub cheie

P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare.

S23: A nu se inspira vaporii și spray-ul.

S26: În cazul contactului cu ochii, spălați imediat cu multă apă și consultați medicul.

S62: În caz de înghițire, a nu se provoca vomă: a se consulta imediat un medic și a-i arăta ambalajul (recipientul) sau eticheta.

S24/25: Evitați contactul cu pielea și ochii.

S36/37/39: Purtați echipament de protecție corespunzător, mănuși și mască de protecție pentru ochi / față

S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.

**AVA S.p.A.**Sediu legal: Via Salaria 1313/c
00138 Roma
Italia**FIȘĂ CU DATE DE SECURITATE**

În conformitate cu Regulamentul (UE) nr. 1272/2008, Regulamentul (UE) nr. 1907/2006, amendat prin Regulamentul (UE) nr. 453/2010, Directiva 67/548/CEE (DPP) și Directiva 1999/45/CE (DSP)

AVOIL WA/LT

1. IDENTIFICAREA SUBSTANȚEI / AMESTECULUI ȘI A SOCIETĂȚII / ÎNTREPRINDERII		
1.1. Element de identificare a produsului		
Denumire produs:	AVOIL WA/LT	
1.2. Utilizări relevante identificate ale substanței sau amestecului și utilizări contraindicate		
Utilizare:	Agent de umectare pentru fluide de foraj pe bază de ulei (OBM)	
1.3. Detalii privind furnizorul fișei cu date de securitate		
Identificarea companiei producătoare		
Nume:	Ava S.p.A.	
Adresă:	Via Salaria 1313/C	
Oraș/Țară:	00138 ROMA (Italia)

2. IDENTIFICAREA PERICOLELOR		
2.1. Clasificarea substanței sau a amestecului		
Indicarea de pericole specifice pentru om și mediul înconjurător:		
SUBSTANȚA / AMESTECUL ESTE CLASIFICAT CA FIIND PERICULOS ÎN CONFORMITATE CU URMĂTOARELE REGLEMENTĂRI		

AVOIL WA/LT

Clasificarea conform Regulamentului (UE) nr. 1272/2008 - (CLP)		
	GHS08	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii
	GHS07	Sens. Cut. 1 H317 – Poate provoca o reacție alergică a pielii
	EUH066	Expunerea repetată poate provoca uscarea sau crăparea pielii
Clasificarea conform Directivei 67/548/CEE (DPP), a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
	Xi - iritant	R43: Poate provoca sensibilizare în contact cu pielea
2: IDENTIFICAREA PERICOLELOR		
2.2. Elemente pentru etichetă		
Etichetarea conform Regulamentului (UE) nr. 1272/2008 (CLP)		
Identificarea pericolelor:	  GHS08 GHS07	Tox. Asp. 1 H304 – Poate fi mortal în caz de înghițire și de pătrundere în căile respiratorii Sens. Cut. 1 H317 – Poate provoca o reacție alergică a pielii
EUH066		Expunerea repetată poate provoca uscarea sau crăparea pielii
Fraze de precauție:		P262: Evitați orice contact cu ochii, pielea sau îmbrăcăminte. P280: Purtați mănuși de protecție / îmbrăcăminte de protecție / echipament de protecție a ochilor / echipament de protecție a feței.
Eliminarea:		P501: Aruncați conținutul / recipientul în conformitate cu reglementările în vigoare pentru substanțe/amestecuri periculoase.
Etichetarea conform Directivei 67/548/CEE (DPP) , a Directivei 1999/45/CE (DSP) și amendamentele, HG 1408/2008, HG 937/2010.		
Identificarea pericolelor:		Iritant R43: Poate provoca sensibilizare în contact cu pielea
Sfaturi de siguranță::		S24: A se evita contactul cu pielea. S37: Purtați mănuși de protecție
Eliminarea:		S60: Acest produs și ambalajul (recipientul) său se vor depozita ca un deșeu periculos.
2.3. Alte pericole		
- - -		

3. COMPOZIȚIE / INFORMAȚII PRIVIND COMPONENTII	
3.1. Proprietăți chimice ale substanței sau amestecului	
Compoziție:	Amestec
Conținut:	În conformitate cu tabelul de mai jos
Formula moleculară:	- - -
Numărul EC:	- - -

AVOIL WA/LT

Numărul ONU:	---
Numărul CAS:	---
Numărul REACH:	---

4. MĂSURI DE PRIM AJUTOR**4.1. Descrierea măsurilor de prim ajutor**

Informații generale	În acest caz de afecțiuni, solicitați asistență medicală. Arătați medicului această Fișă cu Date de Securitate.
După inhalare:	Mutați persoana expusă la aer curat.
După contactul cu pielea:	Scoateți imediat toate hainele contaminate. Spălați imediat cu multă apă sub jet de apă, și, eventual cu săpun, zone de ale corpului care au venit în contact cu produsul, chiar dacă există doar o suspiciune. Spălați-vă bine corpul (duș sau cadă). Scoateți imediat hainele contaminate și eliminați-le în condiții de siguranță.
După contactul cu ochii:	Spălați/irigați imediat ochii, cu apă din abundență. Solicitați asistență medicală.
După înghițire:	Nu provocați vomă. Solicitați asistență medicală.
Alte informații:	N.a.

4.2. Cele mai importante simptome și efecte, atât acute, cât și întârziate.

Simptome	N.a.
----------	------

4.3. Indicații privind orice fel de asistență medicală imediată și tratamentele speciale necesare.

Supraveghere medicală:	Supravegherea medicală în timpul activității la locul de muncă nu este necesară. În caz de boală sau accident, consultați imediat un medic și să îi arătați aceasta Fișă cu Date de Securitate.
------------------------	---

5. MĂSURI DE COMBATERE A INCENDIILOR**5.1. Mijloace de stingere a incendiilor**

Măsuri de precauție în caz de incendiu:	In caz de incendiu urmați aceste instrucțiuni
Mijloace de stingere corespunzătoare:	În caz de incendiu, utilizați apă, dioxid de carbon CO2

AVOIL WA/LT

Mijloace de stingere necorespunzătoare:	Niciunul
Riscuri care derivă din ardere (produși de descompunere termică periculoși):	Nu inhalați gazele de explozie și de ardere.
Echipamente speciale de stingere a incendiilor	În caz de incendiu purtați fața complet acoperită cu un aparat de respirat autonom cu presiune pozitivă și costum de protecție. Colectați separat apa contaminată folosită pentru a stinge focul. Nu evacuați această apă utilizată la stingerea incendiilor în sistemul de canalizare. Dacă este posibil în ceea ce privește siguranța, îndepărtați ambalaje nedeteriorate de pericolul imediat.

6. MĂSURI DE LUAT ÎN CAZ DE DISPERSIE ACCIDENTALĂ**6.1. Precauții personale, echipament de protecție și proceduri de urgență**

Echipament de protecție:	Purtați echipament individual de protecție (mănuși, ochelari și combinezon). Mutați toate persoanele într-o zonă de siguranță.
Proceduri de urgență:	Evitați contactul cu ochii și pielea. Scoateți toate hainele contaminate.

6.2. Precauții pentru mediul înconjurător

Medii de izolare:	Folosiiți material absorbant, organic, nisip.
Metode de limitare a poluarii	Spălați cu apă din abundență.
Informații suplimentare:	Nu se permiteți infiltrarea în sol / subsol. Preveniți scurgerile în apele de suprafață sau în sistemul de canalizare. Rețineți apa de spălare contaminată, în vederea colectării și eliminării acesteia.

7. MANIPULARE ȘI DEPOZITARE**7.1. Precauții pentru manipularea în condiții de securitate**

Precauții pentru manipulare în condiții de securitate:	Evitați contactul cu ochii și pielea, nu inhalați vapori și ceață. Nu utilizați containerele goale înainte de a fi curățate. Înainte de operațiunile de transfer asigurați-vă că nu există materiale incompatibile în containere. Hainele contaminate trebuie schimbate înainte de a intra locurile de servit masa. Nu mâncați și nu beți în timpul lucrului.
--	---

7.2. Precauții pentru depozitare în condiții de securitate, inclusiv eventualele incompatibilități

Condiții de depozitare:	În scopul asigurării performanței produsului, depozitați la temperatura camerei și protejați de îngheț. A se păstra la distanță de alimente, băuturi și hrană pentru animale.
Specificațiile zonei de depozitare:	Zone bine ventilate.
Specificațiile recipientilor:	Container/recipient metalic.
Incompatibilități:	N.a.

7.3. Utilizare finală specifică:

Utilizări finale specifice:	Agent de umectare pentru fluide de foraj pe bază de ulei (OBM)
-----------------------------	--

8. CONTROALE ALE EXPUNERII / PROTECȚIA PERSONALĂ**8.1. Parametri de control - Limite de expunere**

Substanță	Colofoniu (Rosina) CAS No. 8050-09-7
TLV _{Ceiling} :	- - -
TLV _{STEL} (15 minute):	0.15 mg/m ³
UK - EH40/2005 (WEL) - LTE(8h):	0.05 mg/m ³
Valori limită de expunere DNEL	Expunere: Inhalare umană - pe termen lung - Lucrător Profesional: 176 mg / m ³ - Lucrător industrial: 176 mg/m ³

AVOIL WA/LT

	- Consumator: 52 mg/m ³ Dermic uman - Efecte sistemice pe termen lung - Lucrător Profesional: 25 mg / m ³ - Lucrător industrial: 25 mg/m ³ - Consum: 15 mg/m ³ Efectele umane sistemice – administrare orală pe termen lung - Consum: 15 mg/m ³
Valori limită de expunere PNEC	Țintă: Apă proaspătă - Valoare: 0,0054 mg / l Țintă: Apa de mare - Valoare: 0,0054 mg / l Țintă: Sedimente de apă dulce - Valoare: 0,02 mg / kg Țintă: Sedimente apa de mare - Valoare: 0,02 mg / kg Țintă: Sol - Valoare: 0.0015 mg / kg
Substanță	Distilați (de petrol) ușor hidrotratați CAS No. 64742-47-8
TLV-TWA	- - -
DE - TRGS 900 (MAK) - LTE(8h):	140 mg/m ³ , 20 ppm
8.2. Controale ale expunerii profesionale	
8.2.1. Controale tehnice corespunzătoare	Ventilația generală este recomandată.
8.2.2. Măsuri de protecție individuală, precum echipamentul de protecție personală.	Stație de spălare ochi în apropiere.
Protecția individuală	Respiratorie: Utilizați un aparat de respirat
	Ochi Ochelari de protecție.
	Maini Mănuși de protecție totală.
	Corp Imbracaminte de protecție completă a corpului.
8.3. Controlul expunerii mediului	
Variante de expunere	N.a.

9. PROPRIETĂȚI FIZICE ȘI CHIMICE	
9.1. Informații generale	
Forma:	Lichid (20 °C)
Aspect:	Lichid
Culoare:	N.a.
Miros:	Ușor
Prag olfactiv:	N.a.
9.2. Informații pentru sănătate, siguranță și mediu	
pH	N.a.
Punct de topire:	N.a.
Punct de fierbere:	N.a.
Punct de aprindere:	130 °C
Inflamabilitate (solid, gaz):	N.d.
Temperatura de autoaprindere:	N.d.
Temperatura de descompunere:	N.d.
Pericol de explozie:	N.d.
Limita de inflamabilitate superioară:	N.d.
Limita inferioară de inflamabilitate:	N.d.
Presiunea de vapori:	N.d.
Densitatea la 50 °C:	N.d.
Densitatea aparentă (20°C):	0.92 - 0,96 kg/l. (20°C.)

AVOIL WA/LT

Densitatea relativă:	N.d.
Densitatea de vapori:	N.d.
Rata de evaporare:	N.d.
Solubilitate în apă (20°C):	Insolubil
Coeficientul de distribuție (n-octanol):	N.d.
Vâscozitatea (40 °C):	> 7 cSt la 40°C.
9.3. Alte informații	
Alte informații:	N.a.

10. STABILITATE ȘI REACTIVITATE	
10.1. Reactivitate	
Condiții care trebuie evitate:	Stabil în condiții normale.
10.2. Stabilitate chimică	
Materiale incompatibile:	Nu se cunosc
Posibilitatea de reacții periculoase:	Stabil
10.3. Produși de descompunere periculoși	
Alte informații:	N.a.

11. INFORMAȚII TOXICOLOGICE	
11.1. Toxicitate Acută	
Toxicitatea amestecului	
Toxicitate orală acută:	LD50 (Șobolan): > 2000 mg/kg
Toxicitate inhalatorie acută:	LC50 (Șobolan) 4h: > 5.28 mg/l
Toxicitate cutanată acută:	LD50 (Iepure) 24h: > 2000 mg/kg
11.2. Corozivitate
